

Oracle Fusion AI Agents & Agentic AI Pricing FAQ Aug 2026

Documented By:

Pragyan Srivastav

Oracle Fusion AI Agents & Agentic AI Pricing FAQ

1. What are Oracle AI Agents?

Oracle AI Agents are AI-powered assistants within Oracle Fusion that can answer questions, analyze data, automate tasks, and support business processes.

2. Do I need to purchase AI Agents separately?

No. Oracle AI Agent Studio and AI Agent capabilities are included with Oracle Fusion Cloud subscriptions.

3. What are AI Units (AUs)?

AI Units are Oracle's measurement of AI consumption, Think of AI Units as credits that are used when AI performs work.

4. What consumes AI Units?

AI Units are consumed when AI Agents or Agentic Applications perform actions such as:

- Answering questions
- Summarizing content
- Reasoning
- Approving transactions
- Generating documents
- Voice/audio processing

5. Do all AI features consume AI Units?

No. Some Oracle-delivered AI features use Oracle-included LLMs and do not consume AI Units. AI Unit consumption mainly applies to AI Agents and Agentic Applications.

6. Do all AI Agents consume AI Units?

Yes. All AI Agent usage consumes AI Units, including:

- Oracle-delivered agents
- Custom AI Agents
- Marketplace AI Agents

Usage is counted in Development, Test, and Production environments.

7. How many AI Units are included?

Every Oracle Fusion customer receives 20,000 AI Units per month at no additional cost. These are called non-pooled AI Units.

8. Do unused AI Units roll over to the next month?

No. The monthly 20,000 AI Units expire at the end of each month and do not roll over.

9. Will all AI Agents consume AI Units?

- It depends on the AI model (LLM) used by the agent.
- Agents using GPT-oss (Basic LLM) generally do not consume AI Units for standard actions.
- Agents using Premium LLMs consume AI Units.

10. What is BYO LLM?

BYO LLM means: Bring Your Own Large Language Model, Examples:

- OpenAI GPT
- Anthropic Claude
- Meta Llama
- Google Gemini

You pay that LLM provider separately.

11. What is GPT-oss?

GPT-oss is Oracle's Basic AI model (LLM). Standard AI interactions using GPT-oss generally do not reduce your monthly 20,000 AI Unit allocation.

12. What is a Premium LLM?

A Premium LLM is a more advanced AI model that provides stronger reasoning and response capabilities. Premium LLMs consume AI Units whenever they are used.

13. What is the biggest factor affecting AI cost?

- The AI model used by the agent.
- Think of the AI model as the engine inside the AI Agent.
- GPT-oss = Generally no AI Unit consumption for standard actions.
- Premium LLMs = AI Units consumed.

14. Does Oracle charge differently for Seeded, Custom, or Marketplace Agents?

No. Oracle does not charge based on where the agent came from. Pricing is based on AI consumption and the AI model being used.

15. Is a Custom AI Agent more expensive than a Seeded Oracle Agent?

No. A custom agent and seeded agent cost the same if they use the same AI model and perform the same work.

16. Does modifying a seeded Oracle AI Agent increase cost?

No. Modifying a seeded agent does not automatically increase AI cost. The cost depends on AI usage and model selection.

17. How much does a typical Premium AI interaction cost?

A standard Premium LLM interaction consumes approximately 5 AI Units. Since 1 AI Unit is approximately equal to \$0.01: 5 AI Units ≈ \$0.05

18. Can I use AI Agents without additional cost?

Yes. If your usage remains within the monthly allocation and uses GPT-oss where appropriate, there may be no additional charges.

19. Do Development, Test, and UAT environments consume AI Units?

Yes. AI Unit consumption applies across all environments: Development, Test, UAT and Production

20. Is AI testing free?

No. Testing with Premium LLMs consumes AI Units just like Production usage.

21. When does AI Unit billing start?

AI Unit consumption starts being metered when your Oracle Fusion environment is upgraded to Release 26C.

22. What happens if I exceed the 20,000 free AI Units?

Once the 20,000 monthly AI Units are exhausted:

- Oracle will use any purchased AI Unit balance available.
- Additional AI Unit capacity may need to be purchased if consumption continues.

23. How much do additional AI Units cost?

Oracle pricing is: 100,000 AI Units = \$1,000

AI Unit ≈ \$0.01

24. Do purchased AI Units expire monthly?

No. Purchased AI Units can be used throughout the contract term and do not expire monthly.

25. Are purchased AI Units shared across environments?

Yes. Purchased AI Units are pooled and can be used across Dev, Test, UAT, and Production environments.

26. How many Premium AI interactions are included in the free allocation?

Assuming approximately 5 AI Units per Premium interaction: $20,000 \text{ AI Units} \div 5 \text{ AI Units} = 4,000$
Premium AI interactions per month

Oracle Agentic AI

27. What are Agentic Applications?

Agentic Applications are advanced AI-driven applications that coordinate multiple AI Agents to complete an entire business process from start to finish.

28. What is the difference between an AI Agent and an Agentic Application?

AI Agent: single AI assistant designed to perform a specific task. Example:

- Approval Agent
- Supplier Search Agent
- Requisition Status Agent

Agentic Application: A complete AI solution that can orchestrate multiple agents, business processes, tools, and actions together. Example:

- Procurement Advisor
- Finance Close Assistant
- End-to-End Supplier Onboarding Assistant

29. Do Agentic Applications require separate licensing?

Yes. Publishing Agentic Applications to Production requires a separate Oracle subscription.

30. Is Agentic Applications licensing required for Production?

Yes. Oracle documentation states that Oracle Fusion Agentic Applications Cloud Service (B112535) is the subscription that enables Agentic Applications in Fusion

31. What is included with the Agentic Applications subscription?

It includes:

- Production deployment rights for Agentic Applications
- Agentic Applications Builder
- Approximately 30 million AI Units annually

32. Do I need Agentic Applications licensing to build AI Agents?

No. You can build, test, and deploy standard AI Agents using AI Agent Studio without purchasing the Agentic Applications subscription.

33. Should every customer buy Agentic Applications licensing?

No. Only organizations planning to deploy large-scale Agentic Applications in Production should consider it.

34. How many AI Units come with Agentic Applications?

Oracle provides: **2,500,000 AI Units × number of months in subscription**

Example: 12-month subscription:

$2,500,000 \times 12 = 30,000,000$ AI Units

35. How can I monitor AI Unit consumption?

You can monitor AI Unit and token consumption in Oracle Fusion applications by navigating to AI Agent Studio via the Navigator, selecting the Monitoring and Evaluation tab, and opening the Value or Monitoring dashboards to view aggregated usage metrics, active runs, and consumption trends.

36. What should we do before enabling AI at scale?

Before large-scale adoption:

- Identify AI use cases.
- Determine which AI models will be used.
- Estimate AI Unit consumption.
- Monitor usage regularly.
- Establish governance controls.

37. What is the easiest way to keep AI costs low?

- Use GPT-oss whenever possible.
- Reserve Premium LLMs for complex use cases.
- Monitor usage regularly.
- Test before deploying at scale.

Points to note

What should Business Users remember?

Three simple rules:

- Every Fusion customer gets 20,000 AI Units free each month.
- Premium AI models consume AI Units.
- Development, Test, UAT, and Production all count toward usage.

What should Project Managers remember?

Three simple rules:

- Include AI usage in project estimates.
- Include testing and UAT in consumption forecasts.
- Monitor AI Unit usage before Production rollout.

What should Executives remember?

Four simple rules:

- AI Agents are included with Oracle Fusion.
- The first 20,000 AI Units each month are included.
- Premium AI usage consumes AI Units.
- Additional AI Units cost approximately \$1,000 per 100,000 AI Units.

What is the difference between Non-Pooled AI Units and Pooled AI Units?

Oracle provides AI Units in two ways:

1. Non-Pooled AI Units (Included Free)

Every Oracle Fusion Production Environment automatically receives:

20,000 AI Units per month

These AI Units:

- Are included at no additional cost
- Reset every month
- Cannot be carried forward if unused
- Are consumed first before any purchased AI Units

2. Pooled AI Units (Purchased Capacity)

Additional AI Units are provided through Oracle AI subscriptions such as:

- Oracle Fusion AI Units Cloud Service (B112536)
- Oracle Fusion Agentic Applications Cloud Service (B112535)
- Oracle Fusion AI Agents Cloud Service (B112537/B112538)

These AI Units:

- Are shared across users, agents, and environments
- Can be used in Dev, Test, UAT, and Production
- Remain available throughout the subscription term
- Do not reset monthly

How does Oracle consume AI Units?

Oracle first uses the included **20,000 monthly AI Units** (Non-Pooled). Once those are exhausted, Oracle starts consuming the **Purchased Pooled AI Units**.

Simple Example:

Included Monthly AI Units = 20,000

Purchased AI Units = 100,000

Monthly Usage = 25,000

Oracle consumes: 20,000 from the free monthly allocation 5,000 from the purchased pooled balance

Easy way to remember:

- **Non-Pooled AI Units = Free monthly allowance**
- **Pooled AI Units = Purchased shared balance**

Oracle always uses the **free allowance first**, then the **purchased balance**.
