

Oracle Fusion SCM E-Signature Configuration Guide

Prepared By: Salma Ashraf

Introduction

Electronic Signatures in Oracle Fusion SCM provide an additional layer of control by requiring users to authenticate and approve critical business actions before they are completed. This functionality helps organizations enforce compliance, improve auditability, and ensure that sensitive changes are reviewed and approved by authorized personnel.

This document describes the configuration and setup of Electronic Signatures in Oracle Fusion SCM. The implementation steps are demonstrated using a Work Definition E-Signature Approval scenario. Although the screenshots and configuration examples are based on Work Definitions, the same configuration approach can be applied to other Electronic Signature-enabled business processes within Oracle Fusion SCM.

Electronic Signatures can be configured for various Oracle Fusion SCM processes, including Work Definitions, Work Orders, Item Structure changes, and other supported business objects that require controlled approval and traceability.

Reference Scenario: Work Definition E-Signature Approval

1. Enable E-Signature for Business Object

Step 1: Navigate to Setup and Maintenance

- Click on the **Settings and Actions** icon
- Select **Setup and Maintenance**

Step 2: Navigate to Configure Electronic Signature Preferences

- Offering: Manufacturing and Supply Chain Materials Management
- Functional Area: Facilities
- Task: Configure Electronic Signature Preferences

Step 3: Configure Electronic Signature Preferences for the Organization

- Click on the **Select and Add** icon and choose the required organization

Configure E-Signature Preferences

View ▾ [Select and Add] [Filter]

Organization

- Enable** electronic signature option for the transaction that requires approval

Note: For this configuration, I enabled the **Manufacturing Work Definition Management** transaction. This configuration ensures that electronic signature approval is required for Work Definitions within the selected organization “108”.

Configure E-Signature Preferences

View ▾ [Select and Add] [Filter]

Organization	Transaction	Signature Type	Signature Enabled
108 X	Inventory Serial Update	Deferred	☐
	Inventory Serial Update for Classic Pages	In-line	☐
	Maintenance Exception Closure	Deferred	☐
	Maintenance Work Order Approval	Deferred	☐
	Manufacturing Standard Operation Management	In-line	☐
	Manufacturing Work Definition Management	Deferred	☒
	Manufacturing Work Order Approval	Deferred	☐

2. Configure the Work Definition Approval Task

Step 1: Navigate to Manage Task Configuration for Supply Chain Management

- Offering: Manufacturing and Supply Chain Materials Management
- Functional Area: Facilities
- Task: Manage Task Configuration for Supply Chain Management

Step 2: Search for the Work Definition Approval Task

- In the BPM Worklist Task Configuration page, search for the **“WorkDefinitionApproval”** task
- Select the task from the search results

Note: The same configuration approach can be applied to other approval tasks. To configure a different transaction, search for the relevant task name in the BPM Worklist Task Configuration page and perform the required approval rule configuration.

Note: In this scenario, the approval rule is configured to route Work Definition for approval when the organization is 108 (Manufacturing Organization). When this condition is met, the transaction is assigned to a designated approval group for review and approval. **This configuration is provided as an example only; any valid condition, approver, or approval group can be defined based on the organization's business requirements.**

Step 3: Access the Approval Rules

- Click on **Assignees**
- Click on **Go to Rule** to open the approval rule configuration page

Step 4: Access the General Rules

- Click on the **Advanced Add** icon

- Select **General Rules** to configure the approval rule conditions

Step 5: Create a Simple Test Condition

- In the **IF** section, click on the **Advanced Add** icon
- Select **Simple Test**

- Set the **Left Value** to **WorkDefinitionApprovalPayloadType.organization**

- Set the **Operator** to **IS**

- Enter the organization code **"108"** in the **Right Value** field

Note: The organization code is entered within quotation marks because the attribute is evaluated as a character (string) value in the rule condition.

Step 6: Configure the Approval Group

- In the **THEN** section, click the **Advanced Add** icon
- Select **Add Approver**
- Choose **Approval Group** as the approver type

Note: This example uses an Approval Group as the approver. Depending on business requirements, other approver types and routing options can be configured.

- Select the required **Approval Group**

The screenshot shows the Oracle BPM Worklist interface. On the left, a sidebar contains navigation icons for General, Assignees, Data, Deadlines, Notifications, Access, and Configuration. The main area is titled 'Tasks to be configured' and shows a search for 'WorkDefinitionApproval'. Below this, a list of tasks includes 'WorkDefinitionApproval'. The 'Rules' tab is selected, showing a list of rules with 'Rule 1' highlighted. The 'Rule 1 Properties' panel on the right shows the configuration for Rule 1. The 'IF' condition is 'WorkDefinitionApprovalPayloadType.organization is "108"'. The 'THEN' section has a 'List Builder' and an 'Approval Group' dropdown set to 'SA_WD'. A red arrow points to this dropdown. Other options include 'Response Type' (Required), 'Allow empty groups' (False), and 'Rule Name' ('Rule1').

- Click on **Validate** to verify the rule configuration

This screenshot shows the same Oracle BPM Worklist interface as the previous one, but with the 'Validate' button highlighted in a red box in the top right corner of the main area. The 'Rule 1 Properties' panel is still visible, showing the same configuration as before.

- Click on **Commit Task** to save and deploy the changes

- Click on **OK**

3. Test the Configuration

Step 1: Validate the Approval Configuration

- Create a new Work Definition for the organization that meets the configured approval condition
- Submit the Work Definition
- Verify that the Work Definition is routed for approval and its status changes to **Pending Approval**

- Confirm that an **approval notification** is sent to the configured approver or approval group

- Approver opens the approval notification and **review the electronic record**
