

Navigating BI Publisher Reports

Step 1: Open Reports and Analytics

- **Screen Action:** Navigate to the Oracle Fusion Cloud Application Tools/Apps homepage.
- **Execution:** Locate and click on the **Reports and Analytics** workbench application tile to access the environment's reporting framework.

Step 2: Access the Core BI Catalog

- **Screen Action:** The system opens the local Reports and Analytics landing workspace.
- **Execution:** Click the **Browse Catalog** button located in the top-right command section. This action redirects the session out of the simplified dashboard view and opens the full Oracle Transactional Business Intelligence (OTBI) catalog engine (/analytics/saw.dll?catalog).

Step 3: Navigate the Folder Directory

- **Screen Action:** Review the folders panel displayed on the left sidebar.
- **Execution:** Drill down through the unified shared folder directory structure: Shared Folders > Human Capital Management.

Step 4: Locate the Module Workspace

- **Screen Action:** Scroll through the nested sub-folders under Human Capital Management.
- **Execution:** Expand the **Payroll** functional area folder to view payroll-specific analytical objects.

Step 5: Select the Target Data Model

- **Screen Action:** Open the **Data Models** directory located inside the Payroll catalog structure.
- **Execution:** Select the target data model from the main library workspace. In this configuration instance, locate **globalReportsDataModel** (Owner: System Account) and click the **Edit** action link to launch the main data model development workspace.

Step 6: Analyze Data Sets & Diagrams

- **Screen Action:** View the workspace layout within the globalReportsDataModel editing frame.
- **Execution:** Confirm that the primary canvas displays the hierarchical data structure under the **Diagram** tab view. The design builder outlines data relationships, displaying the key element groupings such as G_1 (PAYROLL_ACTION_ID) and its nested child array G_2 (FILE_FRAGMENT).

Step 7: Transition to Data Tab Engine

- **Screen Action:** Navigate between structural layout tabs.
- **Execution:** Click on the **Data** tab situated on the primary sub-navigation toolbar (next to Diagram and Structure) to switch from architectural view into data inspection mode.

Step 8: Configure Data Inspection Filters

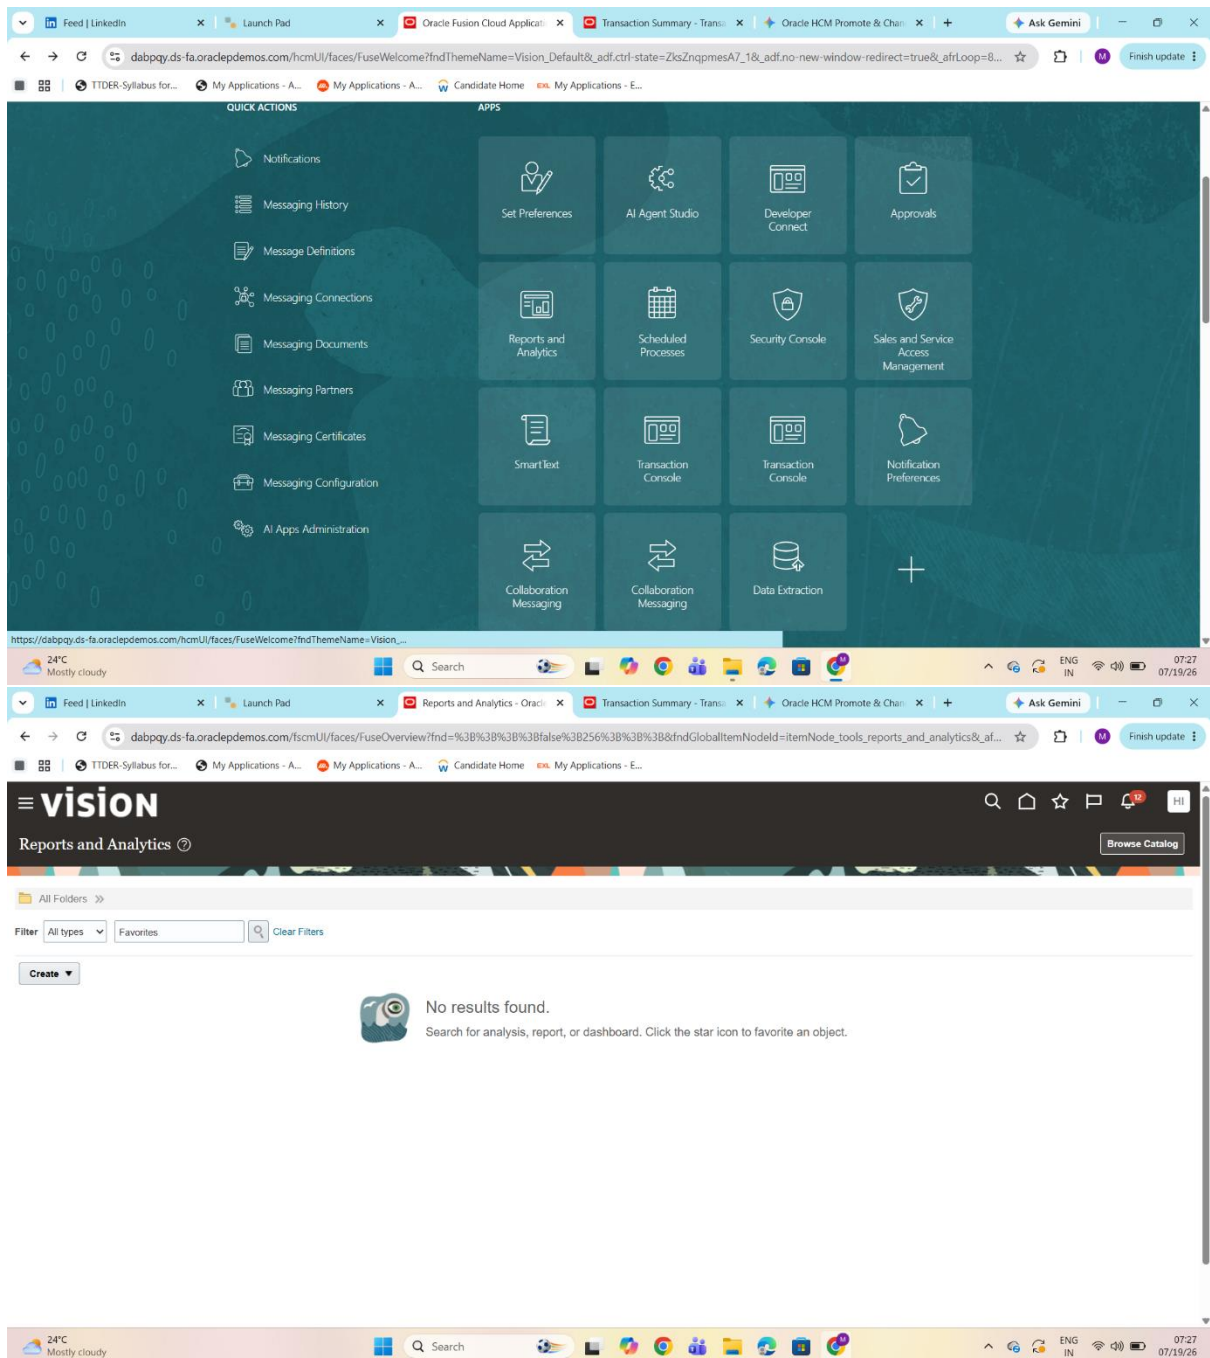

- **Screen Action:** Open the parameter input line.
- **Execution:** Review the active input fields for parameter binds, including archiveActionId, deliveryOptionId, payrollActionId, and flowInstanceName. Underneath the parameters, verify the default display layout configuration (e.g., maximum rows selection set to 5).

Step 9: Fetch and Preview XML Tree View

- **Screen Action:** Click the **View** button on the row actions bar.
- **Execution:** View the generated results rendered within the **Tree View** interface tab. The framework prints out the primary structured DATA_DS tag layout map, verifying that system attributes like SEQUENCE, ISBURSTING (false), and ISCHUNKING are actively exposed within the data schema.

Step 10: Toggle to Table View Presentation

- **Screen Action:** Switch from hierarchical tree nodes to tabular layout rows.
- **Execution:** Click the **Table View** toggle option. The layout refreshes to display the target dataset flat columns alongside metadata fields such as the Oracle BI Publisher document stamp, timestamping the active data extraction instance.
