<u>Business Unit</u>	<u>23</u>

Enterprise Structure:

Business data needs to classify before starting any new project.

How to classify the data?

Employee Data	- Enterprise	HCM (HR, Payroll)
Business Registration Data	- Legal Entity (LE)	
Business Transaction	- Business Unit (BU)	AP/AR/PO/OM/PC/PB
Stock/Item/Goods (Warehouse Data)	- Inventory Organization (IO)	Inventory

Enterprise:

- In one instance we can create one enterprise only

Legal Entity:

- In one instance we can create multiple LE

Business Units:

- Business units nothing but the branches.
- For each BU, we need to maintain transactions branch wise.
- We can create multiple Business units.

Inventory Organization:

- Purpose of inventory organization is maintaining stocks.
- How many warehouses business have those many we have to create inventory organization.

Examples:

1. If Tata Group has 3 Legal Entities and operating from one branch only then;
 - ⇒ For each LE, BU needs to be created.
 - ⇒ 3 Legal entity and 3 Business unites

Example:

2. If Tata Group has 2 Legal Entities and operating from two different locations then;
 - ⇒ For Each LE, BU needs to be created for two different locations
 - ⇒ For 1 Legal Entity – 2 Business units,
 - ⇒ Total 2 Legal Entity – 4 Business units

Example:

3. If Tata Group has 1 Legal Entity and operating from 10 different locations then;
 - ⇒ For 1 Legal Entity – 10 Business unites.

ORACLE FUSION GENERAL LEDGER

Enterprise: (HCM)

If you want to maintain employees details, Enterprise is required.

Division: Optional (N/A)

Business in multiple countries or vertical of business.

Primary Ledger: (GL/FA)

For any application if you want to record transaction PL is required.

For each country, we should create one PL

Legal Entity: (CM)

If you want to record company registration LE is required.

Business Units: (AP/AR/PO/OM/PC/PB)

If you want to record daily transaction of the business, Business Unit is required.

Inventory Organization: IO

If you want to record/maintain stock of the material, IO is required.

Manage Legal Address

Pre-requisites

1. Legal Address

Legal Address is nothing but the business/legal entity registered on which address that we need to define.

Create Legal Address:

- Go to Navigator => Setup and Maintenance => Select Financials as offering => Search for “**Manage Legal Addresses**”

Setup: Financials ▼ 🗨 ? Actions ▼

Column Hidden: 1

Assign Legal Entity to Primary Ledger

- In PL we have COA
- In COA we have 3 companies
- If 3 companies registered with 3 different Legal entities then we need to create 3 LE.
- Companies are assigned under Balancing Segment Label. So, companies are called Balancing segment and company values are called balancing segment values.
- Which company is registered under which Legal Entity, we need to specify or we need to map companies to LE.
- But, we cannot assign balancing segment values to Legal Entity directly.
- First, we need to assign LE to Primary Ledger.
So, that whatever BSV are in COA that you can map with LE.
- Go to Navigator => Setup and Maintenance => Select Financials as offering => Search for “Assign Legal Entities”

Setup: Financials

Complete the Ledger Setup

Additional information:

Whatever setups we do, all the data get stored into Oracle Database.

Once setup is done, we can record the transactions into Oracle database.

Transaction records also get stored into Oracle Database in the form of Tables.

We have tables in Oracle database for every transaction like Invoices/Payments etc.

Oracle is providing feature is called FRS stands for Financial Reporting Structure which is developed by Hyperion reporting Tools (Hyperion is another company) which Oracle acquired.

This tool doesn't support data in which is in the table form.

Data should be available in the cubes to use FRS.

Hyperion database name is Essbase Database.

In Essbase database we can save data in Cubes.

Oracle connected Oracle Database to Essbase Database
if you create any transaction that will store in tables in Oracle Database simultaneously same transaction balances go to Essbase database those will get stored into multidimensional cubes. Then you can prepare transactions related reports by using FRS.

When you complete PL, it will get copied to Essbase Database since both are connected.

Oracle already introduced Essbase Database in the instance we don't need to do any changes in the instance.

ORACLE FUSION GENERAL LEDGER

Review and Submit Accounting Configuration:

It will validate PL to database, and it will copied to Essbase database as well so that it will get stored in cubes.

- Go to Navigator => Setup and Maintenance => Select Financials as offering => Search for “Review and Submit Accounting Configuration”

Status of the PL is in progress, by performing above task it will get changed to “Confirmed”.

Access Set Assignments

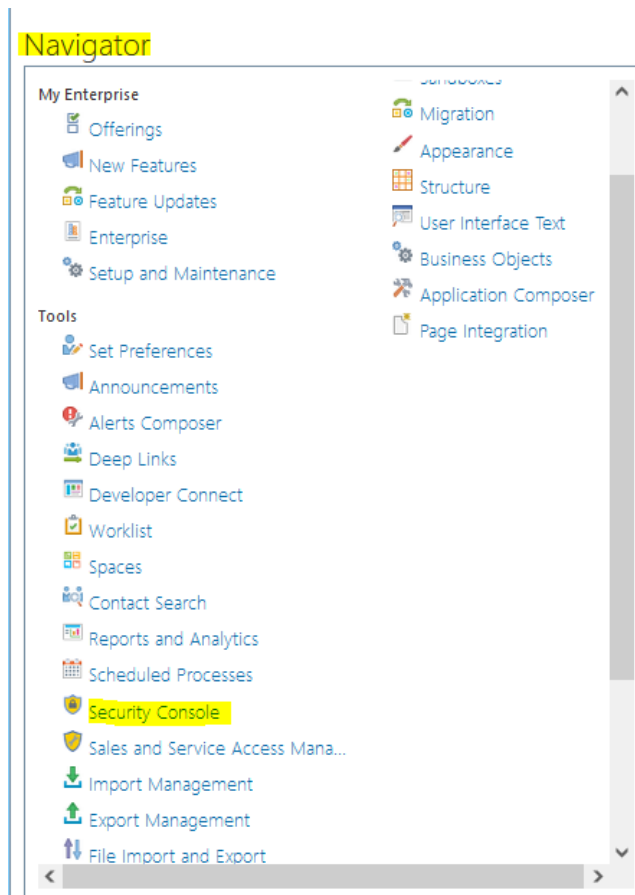

View ▾	Format ▾	+	×					
Ledger or Ledger Set	Type	All Values	Specific Value	Tree Code	Tree Version Name	Segment Value	Privilege	
Tata Primary Ledger - US/	Ledger	☐	Single Value ▾			3000 ▾	Read Only	
Tata Primary Ledger - US/	Ledger	☐	Single Value ▾			2000 ▾	Read and Write	
Tata Primary Ledger - US/	Ledger	☐	Single Value ▾			1000 ▾	Read and Write	

Above data set if you assign to any user, that user won't be able create transaction for Company 3000. User can view transactions only.

Assign GL Roles to User

To create new user and assign any roles to the user, you should have IT Security Manager Role.

- Go to Navigator => Tools => “Security Console”

ORACLE FUSION GENERAL LEDGER

Click on User and Add User Account to create new user:

Note: By this process, we can create implementation user, not a employee user

The screenshot shows the 'User Accounts' page in Oracle Fusion. The top navigation bar includes links like 'Set Preferences', 'Announcements', 'Alerts Composer', 'Deep Links', 'Developer Connect', 'Worklist', 'Contact Search', 'Reports and Analytics', 'Scheduled Processes', 'Security Console', 'Sales and Service Access', and 'Import Management'. The left sidebar contains 'Roles', 'Users', 'Analytics', 'Certificates', 'User Categories', 'Single Sign-On', 'API Authentication', and 'Administration'. The main content area is titled 'User Accounts' and features a search bar with a dropdown for 'All' and a text input for 'User Name'. Below the search bar, there's a table with columns 'Display Name', 'User', 'Status', and 'Action'. The table currently shows 'No data to display.' There are buttons for 'Add User Account' and 'Compare Users' in the top right corner.

Click on Add Roles to assign the Roles

The screenshot shows the 'Add User Account' page in Oracle Fusion. The top navigation bar is the same as the previous screenshot. The left sidebar is also the same. The main content area is titled 'Add User Account' and features a 'Save and Close' button and a 'Cancel' button. The page is divided into two main sections: 'Associated Person Information' and 'User Information'. The 'Associated Person Information' section has a dropdown for 'Associated Person Type' set to 'None'. The 'User Information' section has a dropdown for 'User Category' set to 'DEFAULT', and text input fields for 'First Name', '*Last Name', '*Email', '*User Name', '*Password', and '*Confirm Password'. Below these sections, there's a 'Roles' section with a note: 'Updates involving more than twenty role memberships are processed using the user-to-user role memberships transfer job.' There are buttons for 'Add Role', 'Add Auto-Provisioned Roles', and 'Remove All Roles'. Below the buttons, there's a table with columns 'Role', 'Role Code', 'Assignable', and 'Auto-Provisioned'. The table currently shows 'No data to display.'

Roles to be assigned:

1. General Accountant
2. General Accounting Manager
3. Financial Analyst

Open GL Periods

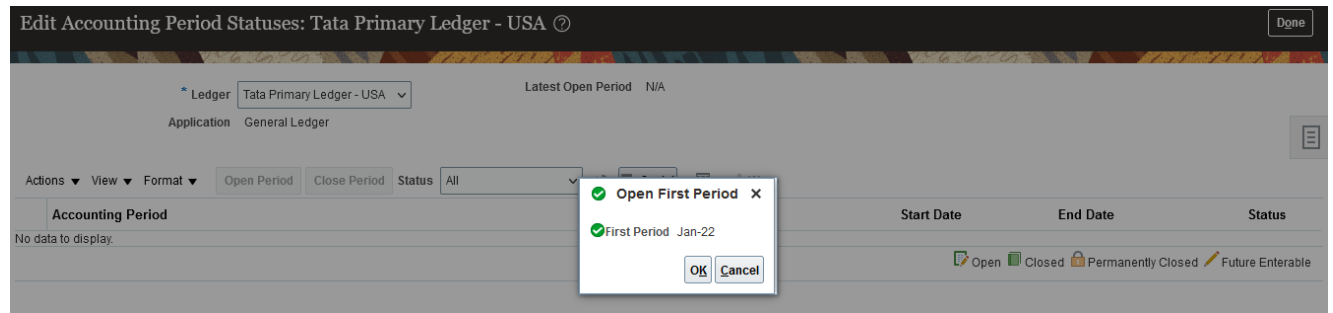

- Go to Navigator => General Accounting => Period Close

Select PL as Data Access Set. Click on General Ledger
(Current status is Never opened)

ORACLE FUSION GENERAL LEDGER

Warning

This action will open the first period in the ledger. Do you want to continue? (GL-780155)

Yes No

As per calendar, it will open first period.

Also there would be next period which will be in Future Enterable Status.

If you want to create any transaction in journal in particular period, that period status should be Open.

Open – Transactions can be created into Open Period and can be Post.

Future Enterable – You can create transaction in Future Enterable period but cant Post.

Closed – Transaction can't be posted to Closed Period but you can reopen the Period

Permanently Closed – Transactions can't be posted and can't be reopened.

If you want to open any Future Period or Target period...

Go to Action and Select "Open Target Period".

Note: System will open all the period which are in between target period.

Example:

Current Period is Jan

Target Period is May

System will open all the periods from Jan to May.

Additional Information:

Legislative Data Group

Create Legislative Data Group

Assign Legislative Data Group to Legal Entity

Create Employee User

1. New Employee User

2. Convert Implementation user as Employee user

When New Employee user needs be created in the instance, we need to select Legal Employer and BU.

Without assigning Legislative Data Group to LE we won't be able to create employee.

Types of Users:

1. Implementation user – If you want to create employee user, we require PL, LE and BU. All these setups needs to be completed.
In fresh instance we get implementation user.
Once we complete above setups, we can create Employee user.
User can't create PO, Supplier and Customer etc...
2. Employee User – Employee users will have privileges to process transaction in instance. When we create employee user, we have to select LE..
When you select LE, system will identify Legislative Data Group

Purpose of creating Legislative Data Group:

Legislative Data Group identify that employee is belongs to which payroll.
Once Legislative data group is created then the same has to be assigned to appropriate LE.

- Go to Navigator => Setup and Maintenance => Tasks => click on Search
