

How to Create a Supplier Portal & Login in Oracle Fusion SCM

A Step-by-Step Guide for Oracle Practitioners

Abstract: Oracle Fusion Supply Chain Management (SCM) includes a powerful iSupplier Portal that allows suppliers to self-register, manage their profiles, view purchase orders, and collaborate with buyers — all through a dedicated web interface. This article walks Oracle practitioners through the complete process of creating a supplier record, enabling the supplier portal, and granting suppliers secure login access via the Security Console.

Introduction

The Oracle Fusion Supplier Portal — often referred to as iSupplier — is a critical component of the Oracle Fusion Procurement and SCM ecosystem. It provides a self-service interface where registered suppliers can interact directly with your organization's purchasing team, reducing manual work, improving transparency, and accelerating procurement cycles.

Setting up the supplier portal involves two distinct phases:

- Creating and configuring the supplier record in Oracle Fusion SCM
- Enabling portal access and providing login credentials to the supplier user

Prerequisites

Before beginning, ensure the following are in place:

- Access to Oracle Fusion SCM with Procurement Administrator or Supplier Management Administrator role
- Access to the Security Console (for user password reset and role assignment)
- Supplier's contact email address — this will serve as the portal login username
- Decision made on approval hierarchy: Business Relation Spend Authorization vs. Prospective supplier option

Part 1: Creating the Supplier Record

Step 1 — Navigate to Supplier Management

Log in to Oracle Fusion SCM and navigate to the Procurement module. From the main menu, open the Suppliers work area. This is the central hub for all supplier creation and maintenance activities.

Figure 1 – Oracle Fusion SCM Supplier Management home screen

Step 2 — Initiate Supplier Creation

Click the Create button to begin creating a new supplier record. The system presents the supplier creation form, which requires you to enter the supplier's basic identifying information.

Figure 2 – Supplier creation form

Step 3 — Complete the Supplier Profile

Complete the supplier profile by filling in all required fields across the various tabs. Pay particular attention to Organisation Details, Address Book, Contacts, and Business Classifications.

Figure 3 – Supplier profile configuration tabs

Step 4 — Select the Spend Authorization Type

Important: If your organisation uses an approval hierarchy, select Business Relation Spend Authorization. Otherwise, select the Prospective option. This controls how purchasing documents are processed against this supplier.

Figure 4 – Spend Authorization type selection (Business Relation vs Prospective)

Step 5 — Save the Supplier Record

Once all required information has been entered, press the Create button to save the supplier record. The system assigns a unique Supplier ID and the supplier is now registered in Oracle Fusion SCM.

Step 6 — Access the Supplier Contact Settings

With the supplier record created, navigate to the supplier contact record. Locate the user account linked to the contact email. This is where portal access is configured.

Figure 6 – Navigating to the supplier contact user account

Step 7 — Configure User Account Settings

Review the user account details and proceed to configure portal-specific settings in the following steps.

Figure 7 – Supplier user account settings overview

Step 8 — Enable the iSupplier Portal Checkbox

In the contact user settings, locate the iSupplier Portal access checkbox. This is the most critical configuration step in the entire process.

Critical: The iSupplier Portal checkbox MUST be enabled. If this checkbox is not checked, the supplier will not be able to access the Supplier Portal under any circumstances — regardless of what roles are assigned. Do not skip this step.

Figure 8 – Enabling the iSupplier Portal access checkbox (mandatory)

Step 9 — Assign Supplier Portal Roles

After enabling the checkbox, assign the appropriate roles to the supplier user. Oracle Fusion provides predefined roles for supplier portal access.

Note: You must assign at least one role to the supplier user. If you assign only one role, you can delete all other roles — but you must retain that assigned role at minimum.

Role	Overall PO Description of the goods/services being requested (not visible on PO pdf to supplier)
Supplier Bidder	Sales representative from a potential supplier responsible for responding to requests for quote, requests for proposal, requests for information and reverse auctions.
Supplier Accounts Receivable Specialist	Manages invoices and payments for the supplier company. Primary tasks include submitting invoices as well as tracking invoice and payment status.
DS AI ERP Supplier Contact	By adding this role to supplier contacts ,supplier portal users(supplier contacts) can receive offers and respond to them via email.

Figure 9 – Assigning Supplier Portal roles to the user

Step 10 — Apply Site-Based Restrictions (Optional)

If your organisation operates with multiple supplier sites, you can restrict portal access at the site level. Navigate to the Sites section and check the mark next to the specific supplier site(s) you want to enable for portal access.

Figure 10 – Restricting portal access to specific supplier sites

Step 11 — Review Site Restrictions

Confirm the site-level restrictions have been applied correctly. This ensures the supplier user only sees transactions and documents associated with their designated site.

Figure 11 – Supplier site restriction confirmation

Part 3: Providing Supplier Login Access

Step 12 — Access the Security Console

Now that the supplier record is configured with portal access, you need to provide the supplier with login credentials. Navigate to the main menu, select Tools, and then open the Security Console. Use the search to find the supplier by their email address.

Figure 12 – Security Console: searching for the supplier user by email

Step 13 — Open the Supplier User Account

Click on the supplier's username in the search results to open their user account details. This screen shows the user's assigned roles, status, and account configuration.

The screenshot displays the 'User Account Details: FDGD Ltd' page in the Oracle Vision Security Console. The interface includes a left-hand navigation menu with options like Roles, Users, Analytics, Certificates, User Categories, Application Extensions, API Authentication, and Administration. The main content area is divided into three sections: User Information, Account Information, and Associated Party Information. The User Information section shows details like User Category (DEFAULT), User Name (FDGD.Ltd), First Name (FDGD), Last Name (Ltd), and Email (waqasmalik501@gmail.com). The Account Information section shows Password Expiration Date (7/7/26) and status (Active). The Associated Party Information section shows Party Name (FDGD Ltd), Party Number (1136719), and Party Usage (Supplier Contact). Below these sections is a table titled 'Roles' with columns for Role, Role Code, Assignable, and Auto-Provisioned. The table lists several roles assigned to the user, including DS AI ERP Supplier Contact, Supplier Accounts Receivable Specialist, Supplier Bidder, Supplier Customer Service Representative, Supplier Demand Planner, Supplier Product Administrator, and Supplier Sales Representative.

Role	Role Code	Assignable	Auto-Provisioned
DS AI ERP Supplier Contact	DS_AI_ERP_SUPPLIER_CONTACT	No	No
Supplier Accounts Receivable Specialist	ORA_POS_SUPPLIER_ACCOUNTS_RECEIVABLE_SPECIALIST...	No	No
Supplier Bidder	ORA_PON_SUPPLIER_BIDDER_ABSTRACT	No	No
Supplier Customer Service Representative	ORA_POS_SUPPLIER_CUSTOMER_SERVICE_REPRESENTATI...	No	No
Supplier Demand Planner	ORA_POS_SUPPLIER_DEMAND_PLANNER_JOB	No	No
Supplier Product Administrator	ORA_EGS_SUPPLIER_PRODUCT_ADMINISTRATOR_JOB	No	No
Supplier Sales Representative	ORA_POS_SUPPLIER_SALES_REPRESENTATIVE_JOB	No	No

Figure 13 – Opening the supplier user account in the Security Console

Step 14 — Reset the Supplier Password

Click the Reset Password button. Oracle Fusion will generate a password reset email and send it automatically to the supplier's registered email address.

The screenshot shows an email titled 'Vision - Welcome E-Mail' with a sub-header 'Inbox x'. The email is from 'eqjz.fa.sender@workflow.email.us-phoenix-1.ocs.oraclecloud.com' to 'me'. The body of the email addresses 'Dear FDGD Ltd,' and congratulates the user on their Oracle Fusion Applications account. It provides instructions to reset the password by following a link: <https://eqjz-ds-fa.oraclepdemos.com:443/hcmUI/faces/ResetPassword?ase.gid=051ab46fedf24dd19d22db93a067dabd>. It also includes contact information for system administrators and a sign-off from Oracle Fusion Applications.

Figure 14 – Initiating password reset for the supplier user

Step 15 — Supplier Receives the Reset Email

The supplier receives an email containing a secure password reset link and instructions to set their new password.

Figure 15 – Password reset email received by the supplier

Step 16 — Supplier Opens the Reset Link

The supplier opens the email and navigates to the reset page. The following screens show the password reset workflow.

Figure 16 – Password reset page (Step 1)

Figure 17 – Password reset page (Step 2)

Figure 18 – Password confirmation and account activation

Step 17 — Copy the Portal Login URL

In the password reset email, there is a highlighted URL that represents the direct login address for the Oracle Fusion Supplier Portal. Copy this highlighted URL and open it in a new browser window.

Tip: Share this portal URL with the supplier as a bookmark for future logins. It is the dedicated iSupplier Portal login page and is separate from the internal Oracle Fusion application URL.

Figure 19 – Highlighted portal URL in the email to copy and share with the supplier

Part 4: Supplier Portal First Login

Step 18 — Supplier Logs In

The supplier navigates to the portal URL and logs in using their email address and newly created password. Upon successful authentication, they are taken to their personalised Oracle Fusion landing page.

Figure 20 – Supplier portal login screen

Step 19 — Verify Role Assignments

After login, the supplier can view the roles assigned to their account. This is a useful verification step for both the supplier and the administrator to confirm the correct portal access levels have been granted.

Figure 21 – Supplier's assigned roles visible after login

Step 20 — Access the Supplier Portal

The supplier clicks on the Supplier Portal tile from their home screen. This launches the full iSupplier Portal interface where they can view purchase orders, submit invoices, respond to RFQs, and manage their profile.

Figure 22 – Supplier Portal home screen (iSupplier)

Quick Reference: End-to-End Process Summary

1	Navigate to Procurement > Suppliers in Oracle Fusion SCM
2	Click Create and fill in the supplier's basic information
3	Complete all profile tabs: Organisation, Address Book, Contacts, Business Classifications
4	Select Spend Authorization type: Business Relation (with hierarchy) or Prospective
5	Click Create to save the supplier record
6	Navigate to the supplier contact's user account settings
7	Enable the iSupplier Portal checkbox — mandatory for portal access
8	Assign at least one Supplier Portal role to the user
9	Optionally restrict access to specific supplier sites
10	Go to Tools > Security Console and search for the supplier by email
11	Open the user account and click Reset Password
12	Supplier receives email with reset link and sets their new password
13	Copy the highlighted portal URL from the email and share with the supplier
14	Supplier logs in, verifies roles, and accesses the Supplier Portal

Common Issues & Troubleshooting

Supplier cannot access the portal after login:

Verify that the iSupplier Portal checkbox is enabled on the supplier contact's user record. This is the most frequently missed step.

Supplier does not receive the password reset email:

Confirm the email address on the supplier's contact record is correct. Also check the spam/junk folder. The sending domain is Oracle's notification system.

Supplier can log in but sees no portal tile:

Check that at least one Supplier Portal role has been assigned in the Security Console. Without a role, the portal will not appear in their menu.

Supplier can see orders from other sites:

Enable site-level restrictions by checking the appropriate supplier site in the Sites section of the supplier record.

Conclusion

Setting up the Oracle Fusion iSupplier Portal is a straightforward process when the steps are followed in order. The three most important checkpoints to remember are:

- The iSupplier Portal checkbox must be explicitly enabled on the supplier contact record
- At least one portal role must be assigned to the supplier user
- The portal URL shared with the supplier comes from the password reset email

By following the process outlined in this article, procurement teams can quickly onboard suppliers to the self-service portal, reducing overhead of manual PO and invoice processing and improving supplier collaboration across the supply chain.

About this Article: This guide is written for Oracle practitioners working with Oracle Fusion SCM Procurement. It is based on hands-on configuration experience with the iSupplier Portal module. All screenshots are taken directly from Oracle Fusion and illustrate each configuration step.
