ORACLE FUSION PROCUREMENT | PURCHASING ERROR MESSAGE GUIDE

PURCHASING • 887 ERROR CODES • ORIGINAL MESSAGES + RECOMMENDED RESOLUTION NOTES

Resolution notes are consultant suggestions; Oracle user details and administrator actions are identified separately.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055002	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this line to the document builder.	**Explanation:** This error appears if a requisition line includes an item that is not enabled in the item validation organization of the procurement business unit (from the purchasing options of the procurement BU). **Oracle user details:** The item isn't purchasable in the item validation organization of the procurement business unit. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055005	The account {ATTRIBUTE_NAME} couldn't be determined. Contact the Procurement application administrator.	**Explanation:** ATTRIBUTE_NAME represents the name of the account that cannot be determined such as PO Charge Account. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055006	You must enter an acknowledgment note when rejecting a document or a change order.	**Resolution note:** Enter a rejection acknowledgment note explaining the reason, then submit the rejection again.
PO-2055015	A rejection reason is missing from some of the lines. You must enter a rejection reason for those lines before you can reject them.	**Resolution note:** Provide a rejection reason for every selected line or schedule before rejecting the response.
PO-2055016	You must select at least 1 changed line to perform this action.	**Resolution note:** Select at least one changed line in the change order, then retry the action.
PO-2055019	A response is missing from some of the lines. You must enter a response for those lines.	**Resolution note:** Provide a response for each affected line or schedule; save and submit the supplier acknowledgment.
PO-2055020	You must enter an acknowledgment response.	**Resolution note:** Choose an acknowledgment response before submitting the supplier acknowledgment.
PO-2055021	You can't perform this action because the record is canceled or finally closed.	**Resolution note:** Confirm the document status in Manage Orders; canceled or finally closed records cannot be modified through this action. Use an eligible active document.
PO-2055022	You can't close the record because it's already closed.	**Resolution note:** Check whether the order is already closed; no additional close action is needed. Review status before retrying.
PO-2055023	You can't close the record for invoicing because it's either already closed for invoicing or on hold.	**Resolution note:** Check whether the schedule is on hold or already closed for invoicing. Resolve the hold where authorized, or leave an already closed schedule unchanged.
PO-2055024	You can't close the record because it's on hold.	**Resolution note:** Review the hold reason and release the hold through the appropriate authorized process before attempting to close.
PO-2055025	You can't close the record for receiving because it's either already closed for receiving or on hold.	**Resolution note:** Review receiving status and any hold; release an applicable hold first, or take no action if already closed for receiving.
PO-2055026	You can't communicate change orders that are in {CO_STATUS} status.	**Explanation:** The token CO_STATUS represents the status of the change order. The system should not communicate a change order in certain statuses such as Incomplete, Rejected etc. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055027	You can't reopen the record for invoicing because it's either already open for invoicing or on hold.	**Resolution note:** Verify the requested reopen status and any active hold. Release the hold if appropriate; do not repeat the action if already open.
PO-2055028	You can't reopen the record because it's either already open or on hold.	**Resolution note:** Verify the requested reopen status and any active hold. Release the hold if appropriate; do not repeat the action if already open.
PO-2055029	You can't reopen the record for receiving because it's either already open for receiving or on hold.	**Resolution note:** Verify the requested reopen status and any active hold. Release the hold if appropriate; do not repeat the action if already open.
PO-2055030	You can't cancel this change order, but you can delete it.	**Resolution note:** Use Delete for this eligible unapproved document or draft change order rather than the Cancel action; confirm status first.
PO-2055031	You can't cancel this document, but you can delete it.	**Resolution note:** Use Delete for this eligible unapproved document or draft change order rather than the Cancel action; confirm status first.
PO-2055032	A rejection reason is missing from some of the schedules. You must enter a rejection reason for those schedules before you can reject them.	**Resolution note:** Provide a rejection reason for every selected line or schedule before rejecting the response.
PO-2055033	A response is missing from some of the schedules. You must enter a response for those schedules.	**Resolution note:** Provide a response for each affected line or schedule; save and submit the supplier acknowledgment.
PO-2055034	The supplier agreement number must be unique for this procurement business unit, supplier, and supplier site.	**Resolution note:** Use a supplier agreement number not already assigned to that procurement BU, supplier and site; check existing agreements to avoid duplication.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055036	You can't acknowledge this document because it isn't pending acknowledgment.	**Resolution note:** Review the document status. Supplier acknowledgment is allowed only when it is pending acknowledgment; avoid repeating an already completed response.
PO-2055037	You can only reprice lines sourced from a blanket purchase agreement.	**Resolution note:** Repricing is available for lines sourced from blanket purchase agreements. Verify the source agreement before using Reprice.
PO-2055038	You can't edit this distribution because the corresponding schedule is either canceled or finally closed.	**Resolution note:** The related schedule is canceled or finally closed. Do not edit its distribution; use an eligible active schedule or approved correction path.
PO-2055039	The change order can't be implemented because additional delivery occurred after its submission.	**Explanation:** Application cannot implement the change order because additional receiving has happened against the purchase order after the change order was submitted for approval. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055040	The purchase order couldn't be created. Contact your help desk.	**Explanation:** This message appears if an error occurs while converting requisitions into purchase orders. **Oracle administrator action:** Contact Oracle Support for assistance. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055041	You must enter an amount that's the same as or less than the agreement amount of {AGREED_AMOUNT} {CURRENCY}.	**Explanation:** The amount on the notification control cannot be greater than the amount agreed on the header. Currency token represents the agreement currency. **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055042	The change order can't be implemented because additional invoicing has happened since its submission.	**Resolution note:** Review receipts and invoices posted after change-order submission. Reassess the proposed changes against the current fulfilled/invoiced quantities, then revise or withdraw the change order as permitted.
PO-2055043	An agreement amount is required because an amount limit is provided.	**Resolution note:** Enter the agreement amount when using an amount limit; validate the figures and resubmit.
PO-2055044	The change order can't be implemented because additional receiving has happened since its submission.	**Resolution note:** Review receipts and invoices posted after change-order submission. Reassess the proposed changes against the current fulfilled/invoiced quantities, then revise or withdraw the change order as permitted.
PO-2055045	The same blanket purchase agreement and agreement line already exist.	**Resolution note:** Remove the duplicate agreement reference; locate and select the intended unique agreement/line before saving.
PO-2055046	The same contract purchase agreement already exists.	**Resolution note:** Remove the duplicate agreement reference; locate and select the intended unique agreement/line before saving.
PO-2055047	An attribute set for this ship-to organization already exists.	**Resolution note:** An identical setup record already exists. Review the existing setup entry and update it if needed rather than creating a duplicate.
PO-2055048	An approved supplier list entry with the same definition already exists.	**Resolution note:** An identical setup record already exists. Review the existing setup entry and update it if needed rather than creating a duplicate.
PO-2055061	You can't cancel or finally close this agreement line because there are open purchase order lines referencing this document.	**Resolution note:** Identify active purchase orders referencing the agreement or agreement line. Close or otherwise resolve the dependent orders through supported processes before attempting final closure or cancellation.
PO-2055062	You can't cancel or finally close this agreement because there are open purchase order lines referencing this document.	**Resolution note:** Identify active purchase orders referencing the agreement or agreement line. Close or otherwise resolve the dependent orders through supported processes before attempting final closure or cancellation.
PO-2055063	You can't perform a final close because a pending receiving transaction exists.	**Resolution note:** Review open receiving interface or pending receipt transactions and complete or correct them before retrying the closing/cancellation action.
PO-2055064	You can't cancel or finally close this schedule because receipts pending delivery exist.	**Resolution note:** Complete or resolve receipts pending delivery for the affected schedule before canceling or finally closing it.
PO-2055065	You can't finally close the purchase order because it has invoices that are unvalidated or didn't pass validation.	**Explanation:** This message is displayed to user when he tries to finally close a purchase order for which invoice validation is attempted but not successful or validation is not attempted. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055066	You can't cancel or finally close this record because schedules with receipts pending delivery exist.	**Explanation:** This error message is displayed when the user tries to cancel or finally close a purchase order, but the application can't because there are open receipts. **Oracle user details:** Contact the requester and ensure all receipts for the purchase order schedules are either delivered or returned before you can cancel or finally close this record. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055067	You can't perform a final close because schedules with in-transit shipments exist.	**Resolution note:** Review in-transit shipments associated with the affected schedule(s); complete or resolve the shipping/receiving flow before cancellation or final close.
PO-2055069	You can't cancel this record because a receipt pending delivery exists.	**Resolution note:** Complete or resolve receipts pending delivery for the affected schedule before canceling or finally closing it.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055072	You can't cancel a schedule that has in-transit shipments.	**Resolution note:** Review in-transit shipments associated with the affected schedule(s); complete or resolve the shipping/receiving flow before cancellation or final close.
PO-2055073	You can't cancel this record because there are schedules with in-transit shipments.	**Resolution note:** Review in-transit shipments associated with the affected schedule(s); complete or resolve the shipping/receiving flow before cancellation or final close.
PO-2055074	You can't cancel this record because a pending receiving transaction exists.	**Resolution note:** Review open receiving interface or pending receipt transactions and complete or correct them before retrying the closing/cancellation action.
PO-2055075	You can't cancel this record without canceling the associated requisitions because received or invoiced schedules exist.	**Resolution note:** Check the received and invoiced schedules and associated requisitions. Choose a supported cancellation approach that preserves already processed activity.
PO-2055076	You must enter a line ID or a line number to cancel a schedule.	**Resolution note:** Specify an existing purchase order line ID or line number in the cancellation request and retry.
PO-2055077	You can't cancel the record because schedules were received after the cancellation change order was submitted for approval.	**Resolution note:** Receipts occurred after the cancellation change order was submitted. Review current received quantities and revise the cancellation request accordingly.
PO-2055080	You can't change the price on a service line.	**Resolution note:** Service-line price changes are restricted for this line type. Verify the line type and adjust only supported attributes or use an appropriate new transaction.
PO-2055081	You can't duplicate this document because one or more lines contain a punchout item with a supplier configuration ID.	**Resolution note:** Punchout configuration items cannot be duplicated with their supplier configuration ID. Recreate the required line through the appropriate punchout shopping flow.
PO-2055082	You can't delete this change order template because it's in use.	**Resolution note:** The template is assigned to existing change orders. Identify and remove its dependencies or retain the template; do not delete while in use.
PO-2055083	You can't duplicate this line because it contains a punchout item with a supplier configuration ID.	**Resolution note:** Punchout configuration items cannot be duplicated with their supplier configuration ID. Recreate the required line through the appropriate punchout shopping flow.
PO-2055084	You can't perform this action on change orders that are in {DOC_STATUS} status.	**Explanation:** This generic message is used in cases when an action cannot be performed on a change order because of change order status. Token DOC_STATUS represents the status of the change order. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055085	You can't split the schedule because multiple distributions exist.	**Resolution note:** The schedule has multiple charge distributions. Review and restructure distributions using supported editing methods before attempting a schedule split.
PO-2055086	You can't add requisition lines to this order because the order status is {DOC_STATUS}.	**Explanation:** The token DOC_STATUS represents the status of the purchase order. User is not allowed to add requisition lines to an order in certain statuses. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055088	You must enter a value for requisitioning business unit or commodity to create a rule.	**Explanation:** At least a value for requisitioning business unit or commodity is required to create a rule. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055089	You must undo your changes before canceling this line or schedule.	**Resolution note:** Undo uncommitted changes on the line or schedule, then start the cancellation action again.
PO-2055090	You can't acknowledge this change order because it isn't pending acknowledgment.	**Resolution note:** Review the document status. Supplier acknowledgment is allowed only when it is pending acknowledgment; avoid repeating an already completed response.
PO-2055091	You can't edit the change order because it's pending approval or pending supplier acknowledgment.	**Resolution note:** The change order is awaiting approval or supplier acknowledgment. Wait for workflow completion, or withdraw it if allowed before editing.
PO-2055092	You can't delete this price break because it was previously approved. Enter an end date for the price break instead.	**Resolution note:** An approved price break cannot be deleted. Set an appropriate end date while respecting the agreement and line effective dates.
PO-2055093	You can't provide a change order description while creating a new purchasing document.	**Resolution note:** Remove the change-order description from the creation request. Populate it only when creating or editing a change order.
PO-2055094	You can remove any open amount by reducing the ordered quantity or amount.	**Resolution note:** Reduce the ordered quantity or amount to the properly outstanding balance; first confirm any received/invoiced commitments.
PO-2055095	You can't delete this change order because it was submitted for approval at least once. Cancel the change order instead.	**Resolution note:** This change order was submitted previously. Use its allowed Cancel action rather than Delete, after reviewing current status.
PO-2055096	The destination type must be inventory on a consignment line.	**Explanation:** Items that are purchased on consignment (meaning not owned by the buying organization) must be delivered to an inventory location. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055097	The PDF couldn't be generated. Contact your help desk.	**Explanation:** This message displays if the system is unable to generate the PDF of the purchasing document due to some unexplained technical exception. **Oracle administrator action:** Contact Oracle Support for assistance. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055098	The trading partner isn't authorized to access the purchase order.	**Explanation:** The error is shown when a trading partner (supplier site) is trying to edit a purchase order that is not issued to that site and hence they are not authorized to edit it. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055099	The requested document to acknowledge couldn't be located. You must enter either a valid document ID or a valid combination of document number and sold-to legal entity.	**Explanation:** User must provide identifying information in order for the application to determine which document the user wants to acknowledge. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055100	The requested schedule to acknowledge couldn't be located. You must enter either a valid line location ID or a valid combination of both the line number and schedule number.	**Explanation:** Message validates that a valid line location ID or line number and schedule number is provided so that application can locate a schedule to acknowledge. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055101	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this line to the document builder.	**Explanation:** The requisition line (REQ_LINE_NUM) of the requisition (REQ_NUM) cannot be added to the document because of the reason mentioned in user details. **Oracle user details:** Requisition lines that reference a supplier configuration ID can only be placed on a purchase order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055106	You must enter an end date that's on or after the creation date of the purchase orders referencing the agreement.	**Resolution note:** Do not end the agreement earlier than the creation date of dependent orders. Change the proposed end date after reviewing referenced POs.
PO-2055107	You must enter a start date that's on or before the creation date of the purchase orders referencing the agreement.	**Resolution note:** Do not set agreement start date after creation of dependent orders. Correct the start date or manage the related orders.
PO-2055111	You can't copy this document because the requisitioning business unit is no longer valid.	**Resolution note:** Verify that the requisitioning BU is active and authorized for the user; use a valid BU before copying the order.
PO-2055112	You can't copy this document because the document style is no longer valid.	**Resolution note:** Verify the document style remains active and available for the document type; select an appropriate style before copying.
PO-2055114	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this requisition line to the document builder.	**Explanation:** The requisition line (REQ_LINE_NUM) of the requisition (REQ_NUM) cannot be added to the document because of the reason mentioned in user details. **Oracle user details:** Lines charged to a project can't be bought from the supplier site in the document builder. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055116	The price returned from the pricing API can't be negative. Contact the Procurement application administrator.	**Explanation:** This message appears if customers have created their own pricing API to calculate or amend PO prices instead of using standard purchasing logic, and their API returns a negative value for price. **Resolution note:** Review price returned by the item/configuration pricing service and related agreement pricing; correct the negative price or pricing setup before retrying.
PO-2055117	You can't make this status the default because it has an end date defined.	**Resolution note:** A default status must remain without an end date. Remove the end date or designate another valid active status as default.
PO-2055122	You can't delete this status because it's the default status.	**Resolution note:** Assign a different eligible default status first; then delete this status if it is no longer referenced.
PO-2055123	You can't delete this status because there are approved supplier list entries using this status.	**Resolution note:** Find approved supplier list entries using this status; update their status before removing the setup value.
PO-2055125	The ordered amount of {ORDERED} must be the same as or more than the delivered amount of {DELIVERED}.	**Explanation:** User gets this error if the user tries to reduce the ordered amount on a purchase order below the amount that has already been delivered. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055126	You must enter an ordered quantity that's the same as or more than the delivered quantity of {DELIVERED}. The current ordered quantity is {ORDERED}.	**Explanation:** User gets this error if the user tries to reduce the ordered quantity on a purchase order below the quantity that has already been delivered. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055127	You can't change the price on this line because cumulative price breaks exist for the referenced agreement line.	**Resolution note:** The line is subject to cumulative price break rules. Review the agreement pricing method; make supported changes on the source agreement rather than overriding this order price.
PO-2055128	You can't add these requisition lines to the document builder.	**Oracle user details:** The requisition lines must belong to the same business unit when creating a new order or adding to an existing order. **Resolution note:** Review requisition line eligibility, sourcing, BU and document-builder compatibility; correct the conflicting lines, then retry.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055130	The supplier order number must be unique for this sold-to legal entity, supplier, and supplier site.	**Explanation:** This error appears when the user-entered value for supplier order already exists for the combination of sold-to legal entity, supplier and supplier site. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055135	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: This requisition line doesn't match any of the lines on the agreement.	**Explanation:** When a buyer adds multiple requisition lines on demand workbench to create a purchase order for them, the system checks that all requisition lines can be sourced against the same agreement. **Resolution note:** The requisition line does not match the referenced agreement line. Verify item, UOM, category and supplier, then select a matching agreement line or another source.
PO-2055137	The generated document number {DOCUMENT_NUMBER} already exists. Contact the Procurement application administrator.	**Explanation:** If the document number generated already exists on the business unit on which the document is being created then this error is shown to the user. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055138	You can't enter an end date for this status because it's the default status.	**Resolution note:** A default status must remain without an end date. Remove the end date or designate another valid active status as default.
PO-2055139	You can't perform this action because a process to upload lines is running or pending.	**Resolution note:** Wait for the active line-upload process to finish or resolve its failed status before repeating this operation.
PO-2055141	You can't change the destination type because the schedule is either fulfilled or invoiced.	**Explanation:** The message is provided when the destination type cannot be changed. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055142	The application can't locate a document to edit. You must enter a valid document ID or a valid combination of document number and sold-to business unit.	**Resolution note:** Provide a valid document identifier, or verify the document number and sold-to BU combination. Check that the user can access the record.
PO-2055144	The invoice match option can't be changed because the schedule is either received or invoiced.	**Resolution note:** Received or invoiced schedules do not permit this match-option change. Retain the existing option or address the requirement through an eligible new schedule or order.
PO-2055145	You must provide a valid value for the {ATTRIBUTE_NAME} attribute. The current value is {VALUE}.	**Explanation:** When a user invokes purchase order web service to create or update an order, the system checks that the value provided for an attribute is valid. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055146	You can't change item revisions on lines with split schedules or sourced from a blanket purchase agreement.	**Explanation:** Message displays when updates are made via the web service. Item revision cannot be modified if multiple schedules exist or if the order line references a blanket purchase agreement. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055147	The line type isn't supported on the document style.	**Resolution note:** Select a line type supported by this document style, or choose a style that supports the required line type.
PO-2055148	The supplier doesn't have permission to update header or distribution level attributes.	**Resolution note:** Supplier-initiated changes are limited to permitted attributes. Ask the buyer to update header/distribution data using the buyer change-order process.
PO-2055149	You must provide at least 1 distribution for each schedule.	**Resolution note:** Add at least one distribution to each schedule; confirm charge account, quantity or amount allocation before submission.
PO-2055150	The document must have at least one line.	**Resolution note:** Add at least one valid purchasing line to the document before submitting it.
PO-2055151	You must provide at least 1 schedule for each line.	**Resolution note:** Add at least one schedule to every purchasing line before saving or submitting.
PO-2055152	You can't change the schedule quantity or amount because multiple distributions exist.	**Resolution note:** Multiple distributions exist. Adjust the schedule by updating and reconciling its distributions rather than directly changing an inconsistent schedule total.
PO-2055153	You can't perform this action on documents that are in {DOC_STATUS} status.	**Explanation:** The message is shown when a user performs an action and the action is not valid based on the status of the document (DOC_STATUS). **Resolution note:** Verify the current transaction status, eligibility and role permissions. Resolve the blocking condition before retrying.
PO-2055154	You can't edit this document because it's frozen.	**Resolution note:** The purchasing document is frozen. Confirm the reason and remove the freeze only through an authorized buyer action, if appropriate.
PO-2055155	You can't perform this action because a pending change order exists.	**Resolution note:** Open the active pending change order and complete, withdraw or cancel it as supported before initiating another action.
PO-2055156	You can't change the purchase order charge account because accounting has happened on the distribution.	**Resolution note:** Accounting has already occurred on this distribution. Do not change the existing charge account; coordinate with Finance on a supported adjustment if correction is required.
PO-2055157	Your application configuration doesn't allow changes to prices on lines that are invoiced or received with accrued liability.	**Explanation:** This message appears when the system is configured to prevent users from updating prices for items that have already been received and/or invoiced. This message will not display if the instance has been configured to allow retroactive pricing. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055158	You can't change the price because the source agreement line doesn't allow price override.	**Resolution note:** The source agreement line prohibits price overrides. Restore the agreed price or amend the agreement through the supported process.
PO-2055160	You can't change the price because the line references a punchout item that prevents price change.	**Resolution note:** Punchout item pricing is controlled by the supplier configuration. Re-source or recreate the punchout item instead of changing its PO price directly.
PO-2055161	You can't change the price because the line references a smart form that prevents price changes.	**Resolution note:** The smart form disallows price changes. Use the price derived from the smart form or correct the form/source selection.
PO-2055162	You can't change project attributes because accounting has happened on the distribution.	**Resolution note:** Project distribution attributes are locked after accounting. Review the transaction with Project Costing/Finance for a supported correction.
PO-2055163	A secondary quantity is required because the item is a dual UOM controlled item.	**Resolution note:** Provide the secondary quantity or UOM required for this dual-UOM-controlled item, using the configured conversion.
PO-2055164	You can't provide a secondary quantity because the item isn't a dual UOM controlled item.	**Resolution note:** Remove the secondary quantity/UOM for a single-UOM item, or select an item correctly configured for dual UOM.
PO-2055166	You can't change the ship-to location because fulfilled or invoiced schedules exist.	**Explanation:** The message is provided when the ship-to location cannot be edited. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055167	A source document line is required because a source blanket purchase agreement is provided.	**Resolution note:** Supply the specific source blanket agreement line when referencing a blanket purchase agreement.
PO-2055169	The combination of procurement business unit and agent must be unique.	**Resolution note:** Check for an existing procurement-agent assignment for this BU; update the existing assignment rather than duplicating it.
PO-2055171	The requested document to cancel couldn't be located. You must enter either a valid document ID or a valid combination of document number and procurement business unit.	**Explanation:** This message is displayed when the application can't locate a document to cancel. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055174	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: Another person is using the record you're attempting to update. Try again later.	**Explanation:** When two buyers simultaneously try to process the same requisition line the system provides this error. **Resolution note:** Review the affected purchase document and the validation condition stated in the message; correct the related data or setup, validate, and retry.
PO-2055179	You can't add these requisition lines to the purchase order because they aren't charged to the same procurement card as the one on the order.	**Resolution note:** Select requisition lines using the same procurement card as the PO, or separate lines into compatible orders.
PO-2055181	You can't cancel a price break on a blanket purchase agreement.	**Resolution note:** Cancellation of a blanket agreement price break is not supported. Review effective dates or amend the agreement as permitted.
PO-2055182	The quantity entered isn't within the allowed deviation for the item.	**Resolution note:** Adjust the entered quantity to the item's configured quantity-deviation tolerance or review the item setup with the responsible administrator.
PO-2055183	You can't provide a secondary UOM because the item isn't a dual UOM controlled item.	**Resolution note:** Remove the secondary quantity/UOM for a single-UOM item, or select an item correctly configured for dual UOM.
PO-2055184	A secondary UOM is required because the item is a dual UOM controlled item.	**Resolution note:** Provide the secondary quantity or UOM required for this dual-UOM-controlled item, using the configured conversion.
PO-2055185	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this requisition line to the document builder.	**Explanation:** This is an error message that appears if there is no currency conversion that can be used to convert a requisition line into a purchase order line. **Oracle user details:** No currency conversion is defined between the currency of the requisition line ({REQ_CUR}) and the document currency ({DOC_CUR}). **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055186	No conversion is defined between the UOM ({PRI_UOM}) and the secondary UOM ({SEC_UOM}).	**Explanation:** {PRI_UOM} represents the primary UOM of the item and {SEC_UOM} is the secondary UOM of the item. This is relevant for items that are tracked in dual UOMs. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055187	A currency conversion rate is required. Contact your help desk.	**Explanation:** This error is provided when the currency conversion rate is missing between the document currency and currency of the sold-to legal entity's primary ledger. An administrator needs to define the currency conversion and reprocess the transaction. **Oracle user details:** Share this info with your help desk: in the Setup and Maintenance work area, use the Manage Daily Rates task to define a currency conversion between the document currency ({DOC_CUR}) and the primary ledger currency of the sold-to legal entity ({SLE_CUR}). **Oracle administrator action:** In the Setup and Maintenance work area, use the Manage Daily Rates task to define a currency conversion between the document currency ({DOC_CUR}) and the primary ledger currency of the sold-to legal entity ({SLE_CUR}), and then resubmit the transaction. **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055189	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this requisition line to the document builder.	**Explanation:** The requisition line (REQ_LINE_NUM) of the requisition (REQ_NUM) cannot be added to the document because of the reason mentioned in user details. **Oracle user details:** The line type ({LINE_TYPE}) isn't supported on the selected style. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055190	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this requisition line to the document builder.	**Explanation:** The requisition line (REQ_LINE_NUM) of the requisition (REQ_NUM) cannot be added to the document because of the reason mentioned in user details. **Oracle user details:** The purchase basis ({PURCH_BASIS}) isn't supported on the selected style. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055191	You must select at least 1 line type.	**Resolution note:** Select at least one applicable line type in the configuration.
PO-2055192	You must select at least 1 purchase basis.	**Resolution note:** Select at least one applicable purchase basis in the configuration.
PO-2055193	The supplier isn't approved for the ordered item or category.	**Resolution note:** Verify approved supplier list qualification for the ordered item/category and supplier site; use an approved supplier or update the approved supplier setup through the authorized process.
PO-2055194	The amount limit can't be reduced below the released amount.	**Resolution note:** Do not set the agreement amount limit below the amount already released. Increase the proposed limit or review released orders.
PO-2055195	You must enter a minimum release amount that's the same as or less than to the amount limit.	**Resolution note:** Set the minimum release amount no higher than the agreement amount limit.
PO-2055196	You must assign the agreement to at least 1 requisitioning business unit.	**Resolution note:** Assign at least one eligible requisitioning BU to the agreement before approval or use.
PO-2055197	The sum of the schedule amounts must be the same as the line amount.	**Resolution note:** Reconcile child schedule totals with the parent line amount or quantity before submission.
PO-2055198	The sum of the schedule quantities must be the same as the line quantity.	**Resolution note:** Reconcile child schedule totals with the parent line amount or quantity before submission.
PO-2055199	The sum of the distribution amounts must be the same as the schedule amount.	**Resolution note:** Correct distribution allocations so their total amount or quantity equals the related schedule total.
PO-2055200	The sum of the distribution quantities must be the same as the schedule quantity.	**Resolution note:** Correct distribution allocations so their total amount or quantity equals the related schedule total.
PO-2055201	The amount change exceeds the price change tolerance amount specified for the requisitioning business unit.	**Resolution note:** Review price-change tolerance configured for the requisitioning BU; correct the proposed amount/price or use an authorized exception process.
PO-2055202	The price change exceeds the price change tolerance percentage specified for the requisitioning business unit.	**Resolution note:** Review price-change tolerance configured for the requisitioning BU; correct the proposed amount/price or use an authorized exception process.
PO-2055203	This line references an agreement that has expired.	**Resolution note:** Verify the referenced agreement expiration date; select an active agreement or renew/amend it before creating the PO.
PO-2055204	Your order will cause the total amount released against agreement {AGR_NUM} to exceed its amount limit.	**Explanation:** When a user submits a document for approval the system validates that the purchase order amount does not cause the total amount released to exceed the amount limit specified on the agreement that is referenced on the purchase order. **Resolution note:** The proposed order would exceed the source agreement or line release limit. Reduce the order amount/quantity or amend the agreement limit if authorized.
PO-2055206	The total amount released against source agreement {AGR_NUM} in this order is less than the required minimum release amount {MIN_AMT}{CURR}.	**Explanation:** When a user submits a purchase order for approval the system validates that the amount ordered on the purchase order is greater than or equal to the minimum release amount specified on the agreement that is referenced. **Resolution note:** Increase the purchase release value to the minimum permitted by the source agreement/line, or source the line from a different eligible agreement.
PO-2055207	The total amount released against source agreement {AGR_NUM} line {AGR_LINE_NUM} in this order is less than the required minimum release amount {MIN_AMT}{CURR}.	**Explanation:** When a user submits a purchase order for approval the system validates that the amount ordered on a purchase order line is greater than or equal to the minimum release amount specified on the agreement line that is referenced. **Resolution note:** Increase the purchase release value to the minimum permitted by the source agreement/line, or source the line from a different eligible agreement.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055208	The unit of measure conversion doesn't exist or is disabled.	**Resolution note:** Review UOM conversion setup for the item and involved UOMs; activate or define the required conversion before retrying.
PO-2055209	You must enter a price limit that's the same as or more than the price of the line.	**Resolution note:** Set the price limit equal to or greater than the line price while following the agreement terms.
PO-2055210	You must enter a line price that's less than the source agreement line price limit of {PRICE_LIMIT} {CURR}. The current line price is {LINE_PRICE}.	**Explanation:** The system provides this error if a user enters a price on a purchase order line that's more than the price limit set on the agreement that's referenced on the purchase order line. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055211	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this requisition line to the document builder.	**Explanation:** The requisition line (REQ_LINE_NUM) of the requisition (REQ_NUM) cannot be added to the document because of the reason mentioned in user details. **Oracle user details:** The taxation country and document fiscal classification on this requisition line don't match the taxation country and document fiscal classification of the requisition lines that are in the document builder. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055212	You can't add these requisition lines to the document builder because not all lines reference the same taxation country and document fiscal classification.	**Resolution note:** Group requisition lines with the same taxation country and fiscal classification; create separate purchasing documents for incompatible lines.
PO-2055213	The tax for this order couldn't be calculated. Contact the Procurement application administrator.	**Explanation:** Shown when there is some error while calculating the tax. **Resolution note:** Verify tax regime, classification and applicable procurement BU/legal entity; correct the tax attributes, then recalculate tax and validate.
PO-2055214	The tax for this order couldn't be validated. The tax will be recalculated when the document is submitted for approval.	**Resolution note:** Review tax classification and configuration, then submit for approval so Oracle recalculates the tax; confirm the recalculated amount before proceeding.
PO-2055215	The combination of UN number and description must be unique.	**Resolution note:** Remove or correct the duplicate UN number and description combination.
PO-2055216	This supplier site is on purchasing hold.	**Explanation:** This is an error message that appears when the buyer tries to submit an order/agreement for approval, but the supplier site is on hold. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055220	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this requisition line to the document builder.	**Explanation:** The requisition line (REQ_LINE_NUM) of the requisition (REQ_NUM) cannot be added to the document because of the reason mentioned in user details. **Oracle user details:** Requisition lines that reference an emergency PO number can only be placed on a purchase order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055222	You must enter an end date for the price break that's on or before the end date of the agreement on {AGREEMENT_END_DATE}. The current price break end date is {PRICE_BREAK_END_DATE}.	**Explanation:** A price break is associated with an agreement line. End date of a price break must not be after the agreement end date. **Resolution note:** Review agreement, line and price break effective dates. Align the price break to the permitted period and validate the agreement.
PO-2055223	The start date of the price break ({PRICE_BREAK_START_DATE}) must be on or after the start date of the agreement ({AGREEMENT_START_DATE}).	**Explanation:** A price break is associated with an agreement line. Start date of a price break must not be before the agreement start date. **Resolution note:** Review agreement, line and price break effective dates. Align the price break to the permitted period and validate the agreement.
PO-2055224	You must enter an end date for the price break that's on or before the expiration date of the line on {LINE_EXPIRATION_DATE}.	**Explanation:** A price break is associated with an agreement line. End date of a price break must not be after the line expiration date. **Oracle user details:** The current price break end date is {PRICE_BREAK_END_DATE}. **Resolution note:** Review agreement, line and price break effective dates. Align the price break to the permitted period and validate the agreement.
PO-2055225	You must enter a start date for the price break that's on or before the end date of the agreement on {AGREEMENT_END_DATE}.	**Explanation:** A price break is associated with an agreement line. Start date of a price break must not be after the agreement end date. **Oracle user details:** The current price break start date is {PRICE_BREAK_START_DATE}. **Resolution note:** Review agreement, line and price break effective dates. Align the price break to the permitted period and validate the agreement.
PO-2055226	The end date of the price break ({PRICE_BREAK_END_DATE}) must be on or after the start date of the agreement ({AGREEMENT_START_DATE}).	**Explanation:** A price break is associated with an agreement line. End date of a price break must not be before the agreement start date. **Resolution note:** Review agreement, line and price break effective dates. Align the price break to the permitted period and validate the agreement.
PO-2055227	You must enter a start date for the price break that's on or before the expiration date of the line on {LINE_EXPIRATION_DATE}.	**Explanation:** A price break is associated with an agreement line. Start date of a price break must not be after the line expiration date. **Oracle user details:** The current price break start date is {PRICE_BREAK_START_DATE}. **Resolution note:** Review agreement, line and price break effective dates. Align the price break to the permitted period and validate the agreement.
PO-2055228	You must enter an expiration date that's after the end date of all of the price breaks.	**Resolution note:** Move the line expiration date after the latest price break end date, ensuring all dates still fall within the agreement validity.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055229	The expiration date must be within the start and end dates of the agreement: {AGREEMENT_START_DATE} to {AGREEMENT_END_DATE}.	**Explanation:** The expiration date of an agreement line must be within the start and end dates of the agreement. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055231	The application can't locate a document to cancel. You must enter a valid document ID or a valid combination of document number and sold-to business unit.	**Explanation:** The error message needs to be provided when the document ID is not valid. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055232	You must enter a line amount that's less than the source agreement line price limit of {PRICE_LIMIT} {CURR}. The current line amount is {LINE_AMT}.	**Explanation:** The system provides this error if a user enters an amount on a purchase order line that's more than the price limit set on the agreement that's referenced on the purchase order line. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055233	You can't provide a price break on a service line.	**Resolution note:** Remove the price break from the service line, or use an eligible goods line/appropriate service pricing arrangement.
PO-2055234	The value for this attribute must be unique.	**Resolution note:** Check the applicable uniqueness scope and enter a value not already used.
PO-2055235	You must enter an amount limit that's the same as or more than the agreement amount.	**Resolution note:** Set the amount limit to at least the agreement amount.
PO-2055236	You must enter an ordered amount that's the same as or more than the invoiced amount of {BILLED}. The current ordered amount is {ORDERED}.	**Explanation:** User gets this error if the user tries to reduce the ordered amount on a purchase order below the amount that has already been invoiced. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055237	The ordered amount ({ORDERED}) must be the same as or more than the received amount ({RECEIVED}).	**Explanation:** User gets this error if the user tries to reduce the ordered amount on a purchase order below the amount that has already been received. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055238	You can't delete this distribution because it's linked to a requisition.	**Resolution note:** This distribution originates from a requisition. Change the source requisition or adjust an eligible distribution using the supported process instead of deleting it.
PO-2055241	The ordered quantity of {ORDERED} {PRICING_UOM} must be the same as or more than the invoiced quantity of {BILLED} {PRICING_UOM}.	**Explanation:** User gets this error if the user tries to reduce the ordered quantity on a purchase order below the quantity that has already been invoiced. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055242	You must enter an ordered quantity that's the same as or more than the received quantity of {RECEIVED}. The current ordered quantity is {ORDERED}.	**Explanation:** User gets this error if the user tries to reduce the ordered quantity on a purchase order below the quantity that has already been received. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055243	You can't change the accrual method because the schedule is either fulfilled or invoiced.	**Resolution note:** The schedule has been fulfilled or invoiced. Retain its accrual method and coordinate with Finance on any needed accounting treatment.
PO-2055244	You aren't allowed to accrue expense items at receipt.	**Explanation:** This message appears if the destination type is set to 'Expense', accrual accounting is set to 'Period End', and the user tries to set the 'Accrue at Receipt' flag to 'Yes'. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055246	You must accrue at receipt because the destination type is inventory.	**Resolution note:** Set accrual to receipt for inventory-destination purchasing schedules.
PO-2055247	An acknowledgment response time is required because document requires supplier acknowledgment.	**Resolution note:** Enter the required acknowledgment response time on a document that requires supplier acknowledgment.
PO-2055249	The {ATTRIBUTE_NAME} attribute can't be changed.	**Explanation:** When a user invokes purchase order web service to update an attribute that cannot be updated then the system provides this error. **Resolution note:** A protected purchasing attribute cannot be changed on the current record. Restore the original value and review the approved change-order rules before requesting a replacement.
PO-2055250	A supplier can't add a line to an order.	**Resolution note:** Supplier responses cannot add PO lines. Ask the buyer to create the required line using a buyer-initiated change order.
PO-2055251	This attribute can't be changed when the change order initiator is a supplier.	**Explanation:** The supplier is attempting to create a change order and is not allowed to change this attribute of the document. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055252	A conversion rate is required when using user-defined rate types.	**Resolution note:** Enter a conversion rate when using a user-defined currency rate type and verify the date/currency pair.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055254	You can't change the deliver-to location because the schedule is either fulfilled or invoiced.	**Explanation:** This message is provided when the deliver-to location is not editable for the reasons described. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055255	You can't change the destination charge account because accounting has happened on the distribution.	**Resolution note:** Accounting has already occurred on this distribution. Do not change the existing charge account; coordinate with Finance on a supported adjustment if correction is required.
PO-2055256	The destination type can't be inventory because the item is no longer stockable in the ship-to organization.	**Resolution note:** Confirm the item is stockable in the ship-to inventory organization. Choose a valid destination type or eligible stockable item.
PO-2055258	You can't cancel a line or a schedule on a contract purchase agreement.	**Resolution note:** A contract purchase agreement does not support cancellation at line or schedule level. Review permitted header-level agreement actions.
PO-2055259	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: This requisition line is no longer available.	**Explanation:** The requisition line (REQ_LINE_NUM) of the requisition (REQ_NUM) is no longer available to be processed because of at least one reason mentioned in the user details. **Oracle user details:** One of the following has happened to the requisition line: it was processed onto a purchase order or negotiation, it was returned, it was reassigned to another buyer, it was split, it was updated from the catalog, or it's canceled or withdrawn. **Resolution note:** The requisition line is no longer available. Confirm it was not canceled, reassigned, or already processed; select an available line to source.
PO-2055260	You can't perform this action because a document cancellation change order already exists.	**Resolution note:** A document cancellation change order already exists. Complete, withdraw or resolve that change order before another action.
PO-2055261	You can't perform this action because the change order was initiated by another party.	**Resolution note:** The active change order belongs to a different initiating party. Coordinate with that party to complete or withdraw it before making another change.
PO-2055262	You can't perform this action on a cancellation change order.	**Resolution note:** Only cancellation actions are permitted on a cancellation change order. Return to the appropriate document/change order flow for other modifications.
PO-2055263	You can't delete this record because it was previously approved. Cancel the record instead.	**Resolution note:** Previously approved records cannot be deleted. Use the permitted cancellation action after reviewing dependencies.
PO-2055264	You can't communicate the document because it was canceled before the supplier received the order.	**Resolution note:** The PO was canceled before supplier communication. Confirm the final status; do not attempt to communicate the canceled order.
PO-2055265	You can't cancel newly added records. Delete the record instead.	**Resolution note:** Remove the newly added unapproved record using Delete instead of Cancel.
PO-2055266	You can't delete this business unit assignment because it was previously approved. Disable the assignment instead.	**Resolution note:** Disable the approved BU assignment rather than deleting it.
PO-2055267	You can't delete documents that were previously submitted for approval. Cancel the document instead.	**Explanation:** Once a purchase order has gone through the approval process, history is captured for the document. Historical information cannot be deleted. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055269	The amount on one of the notification controls is more than the agreement amount of the agreement.	**Resolution note:** Adjust the notification threshold to not exceed the agreement amount.
PO-2055272	You can't edit the unit of measure on this line because it was previously approved.	**Resolution note:** The approved line UOM is locked. Use the original UOM or process a supported replacement/new line as appropriate.
PO-2055273	You can't provide start and end dates for cumulative price breaks.	**Resolution note:** Cumulative price breaks do not support individual start/end dates. Remove these dates and use the proper cumulative pricing configuration.
PO-2055274	The line description for the specified line item can't deviate from the standard description of the item.	**Resolution note:** Restore the standard item description or update the item master description through the controlled master-data process.
PO-2055275	The document number must be unique in a procurement business unit.	**Resolution note:** Provide a document number unique within the procurement BU; confirm numbering setup to prevent duplicates.
PO-2055276	The document style isn't valid for this type of document.	**Resolution note:** Select a document style allowed for the chosen purchasing document type.
PO-2055277	You can't provide a price limit unless you allow price override.	**Resolution note:** Enable price override where permitted before setting a price limit, or remove the price limit.
PO-2055278	The expiration date of the line must be within the start and end date of the agreement.	**Resolution note:** Adjust line expiration date to fall inside the agreement start and end dates.
PO-2055279	Project information on the distribution isn't valid. {PJM_ERROR_MSG}.	**Explanation:** The token represents the error message that purchasing will receive from projects on the cause of the error. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055280	The value of the attribute isn't valid.	**Resolution note:** Check the specified attribute against its valid value list and applicable BU/organization setup; correct and resubmit.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055281	You can't provide a category for an existing item.	**Resolution note:** For an existing item, derive its category from item master data; remove manual category override or correct the item category assignment.
PO-2055282	You can't provide translations for item descriptors because the descriptor doesn't exist in the base language.	**Resolution note:** Create the item descriptor in the base language first, then add translations.
PO-2055283	The requested document to edit couldn't be located.	**Oracle user details:** You must enter either a valid document ID, a valid combination of supplier agreement number and supplier site, or a valid combination of document number and procurement business unit. **Resolution note:** Provide a valid document identifier, or verify the document number and sold-to BU combination. Check that the user can access the record.
PO-2055284	You must enter a value for at least 1 of ship-to organization, location, quantity, start date, or end date.	**Resolution note:** Provide at least one valid price-break qualifier: ship-to organization, location, quantity, start date or end date.
PO-2055285	You must enter an end date for the price break that's on or after the start date of the agreement.	**Resolution note:** Correct the relevant price break start/end date so it falls within the agreement and line effective dates.
PO-2055286	You must enter an end date for the price break that's on or before the end date of the agreement.	**Resolution note:** Correct the relevant price break start/end date so it falls within the agreement and line effective dates.
PO-2055287	You must enter an end date for the price break that's on or before the expiration date of the line.	**Resolution note:** Correct the relevant price break start/end date so it falls within the agreement and line effective dates.
PO-2055288	You must enter a start date for the price break that's on or after the start date of the agreement.	**Resolution note:** Correct the relevant price break start/end date so it falls within the agreement and line effective dates.
PO-2055289	You must enter a start date for the price break that's on or before the end date of the agreement.	**Resolution note:** Correct the relevant price break start/end date so it falls within the agreement and line effective dates.
PO-2055290	You must enter a start date for the price break that's on or before the expiration date of the line.	**Resolution note:** Correct the relevant price break start/end date so it falls within the agreement and line effective dates.
PO-2055291	The document style doesn't support price breaks.	**Resolution note:** Use a document style that supports price breaks or remove the price break from this document.
PO-2055293	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The configuration price couldn't be determined.	**Explanation:** Message appears when the base model can be sourced to a valid agreement, but the components that make up the configuration cannot be sourced to that same agreement. **Oracle user details:** Pricing information couldn't be found for some of the configuration components. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055294	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The configuration price couldn't be determined.	**Explanation:** When pricing configurations, the system adds the price of the base model to the extended price of the components that are part of the configuration. If this value is less than zero, this message is shown. Requisitions cannot have negatively-priced lines. **Oracle user details:** Invalid pricing information has resulted in a negative price for the configuration. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055299	The document style doesn't support procurement of configurations.	**Explanation:** This message appears when a buyer specifies configuration-specific fields while uploading a blanket agreement into the system, but the document style of the agreement doesn't support these fields. (In order to specify configuration-specific details for an agreement, you must use a document style that supports these fields) **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055304	The combination of document type and determinant value must be unique.	**Resolution note:** Review existing document-type/determinant combinations; update the matching setup row rather than inserting a duplicate.
PO-2055305	The document number exceeds the 30 character limit for the document type {DOC_TYPE} and value {DETERMINANT_VALUE} combination.	**Explanation:** Shown when the document number exceeds the 30 character limit. **Resolution note:** Shorten the proposed document number to 30 characters or fewer and confirm the document numbering setup for the type/determinant.
PO-2055306	The order number must be unique in a sold-to legal entity.	**Explanation:** Error shown while importing a purchase order and the entered order number already exists. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055308	The distribution didn't pass the funds check.	**Explanation:** Shown when the budgetary control module returns that the funds check failed on the distribution. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055311	This record can't be canceled because changes are being proposed on either an associated line, schedule, or distribution.	**Explanation:** This error is passed to the web service output when a line or schedule is being changed and at the same time being canceled. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055314	The requested document couldn't be located. You must enter either a valid PO header ID or a valid combination of order number and sold-to legal entity.	**Explanation:** This error is provided when the document number provided in the PO web service or PDOI to change the order is not valid. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055315	The requested document to cancel couldn't be located. You must enter either a valid document ID or a valid combination of document number and sold-to legal entity.	**Explanation:** This error is provided when the application is not able to locate a document. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055316	A purchase order can't be created because no qualifying financial orchestration flow could be found for one or more requisition lines.	**Explanation:** This error is provided when the sold-to legal entity at the document builder is different from the requisitioning BUs legal entity and one or more requisition lines do not roll up to the same sold-to legal entity. **Oracle user details:** A financial orchestration flow must exist for each requisition line between the requisitioning business unit's legal entity and the sold-to legal entity in the document builder. **Resolution note:** No qualifying financial orchestration flow exists for the relevant legal entities. Review intercompany financial orchestration assignments and legal entity relationships with Finance.
PO-2055317	A conversion rate type is required because the primary ledger currency of the sold-to legal entity and the document currency are different.	**Explanation:** This error is provided when the currency of the PO is different from the functional currency of the sold-to LE **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055320	The requested purchase order couldn't be located.	**Explanation:** This message code is returned via the purchase request web service. It is an exception and it is not expected to occur. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055321	Requisition {NUM}, Line {LNUM}: The deliver-to organization's legal entity, {DEL_LE}, must be the same as the sold-to legal entity in the document builder.	**Explanation:** Shown when buyer is creating a purchase order from requisition lines and one or more lines point to a legal entity different from the sold-to legal entity on the document builder. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055322	The ship-to organization's legal entity, {SHIP_TO_LE}, must be the same as the sold-to legal entity on the purchase order.	**Explanation:** Shown when the legal entity associated with the ship-to organization is different from the sold-to legal entity on the purchase order header. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055325	You must provide a value for requisitioning business unit before entering a value for the {ATTRIBUTE_NAME} attribute.	**Explanation:** A value must be provided for requisitioning business unit before entering a value for this attribute. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055329	A financial orchestration flow couldn't be determined for the schedule.	**Explanation:** This error will be provided when the financial orchestration flow does not exist on schedules that should have one. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055330	The {ATTRIBUTE_NAME} attribute can't be changed because there are existing purchase order lines that reference this agreement line.	**Explanation:** You cannot change {ATTRIBUTE_NAME} because purchase orders referencing this agreement line exist. **Resolution note:** A protected purchasing attribute cannot be changed on the current record. Restore the original value and review the approved change-order rules before requesting a replacement.
PO-2055331	Aging period days is required because the document specifies an aging onset point.	**Resolution note:** Specify aging period days when an aging onset point is configured.
PO-2055335	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this line to an existing order line because this line is associated with an information template.	**Explanation:** The token REQ_NUM and REQ_LINE_NUM represents the requisition number and requisition line number respectively of the requisition line that cannot be added to a purchase order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055336	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add a service line to an existing order line.	**Explanation:** The token REQ_NUM and REQ_LINE_NUM represents the requisition number and requisition line number respectively of the requisition line that cannot be added to a purchase order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055338	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this requisition line to the order.	**Explanation:** The token REQ_NUM represents the requisition number and REQ_LINE_NUM the requisition line number that cannot be added to the purchase order. **Oracle user details:** The requisition line is for a supplier configuration and the supplier and the supplier site of the configuration is different from the order's supplier or supplier site. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055339	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't group this line with other lines because this line is associated with an information template.	**Explanation:** The token REQ_NUM represents the requisition number and REQ_LINE_NUM the requisition line number of the requisition line that cannot be grouped. **Resolution note:** This requisition line cannot be grouped with the selected lines. Keep the information-template, service or configuration line separate as required.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055340	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't group a service line with another requisition line.	**Explanation:** The token REQ_NUM and REQ_LINE_NUM represents the requisition number and requisition line number respectively of the requisition line that cannot be group. **Resolution note:** This requisition line cannot be grouped with the selected lines. Keep the information-template, service or configuration line separate as required.
PO-2055341	You can't group these lines into the same order line.	**Explanation:** If an attribute value does not match on two different requisition lines that are selected for creating a purchase order then this message is provided. REASON_FOR_DIFF is that attribute whose values does not match. PO_LINE_NUM represents the purchase order line number that the user is trying to combine the requisition lines into. **Oracle user details:** Requisition lines identified for order line {PO_LN_NUM} have differing values for the attribute {REASON_FOR_DIFF}. **Resolution note:** This requisition line cannot be grouped with the selected lines. Keep the information-template, service or configuration line separate as required.
PO-2055342	The supplier site is enabled to communicate through an electronic message but the message couldn't be delivered. Contact your help desk.	**Explanation:** When the application is not able to deliver the electronic message then a notification is sent to the buyer. This message is shown in that notification. **Oracle administrator action:** Review the errors in the Oracle B2B Gateway console. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055343	You can't edit this agreement because it wasn't transferred to you for catalog authoring.	**Resolution note:** Agreement catalog authoring is not assigned to you. Ask the document owner to transfer or grant access before editing.
PO-2055350	The application can't locate a document to edit.	**Oracle user details:** You must enter either a valid document ID, a valid combination of supplier order number and supplier site, or a valid combination of document number and sold-to business unit. **Resolution note:** Provide a valid document identifier, or verify the document number and sold-to BU combination. Check that the user can access the record.
PO-2055351	An order number wasn't generated because the requisitioning configuration isn't defined for the sold-to business unit.	**Resolution note:** Review purchasing/requisitioning document numbering and configuration for the sold-to BU before recreating the PO.
PO-2055352	The unit of measure on the order line and the source agreement line referenced on the order must be the same.	**Resolution note:** Use the same UOM on the order line as the referenced source agreement line, or select a compatible source agreement.
PO-2055354	The value of the {ATTRIBUTE_NAME} attribute determined by the application isn't valid. Contact the Procurement application administrator.	**Explanation:** The token ATTRIBUTE_NAME represents the name of the account that is invalid such as PO Charge Account. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055356	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The order line number must be positive.	**Explanation:** Buyer can manually specify an order line number for a given requisition line. However, the order line number must be a positive number. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055360	The purchasing site {PURCHASING_SITE} specified on the business unit assignment isn't valid.	**Explanation:** The supplier site specified on the document must be valid in order to approve the document. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055361	The document was deleted.	**Explanation:** Error shown when user clicks on a link associated with a document that is already deleted. **Resolution note:** The source document has been deleted. Refresh the search and reference an existing active document; do not reuse the deleted identifier.
PO-2055363	You can't view this change order because it was either deleted, canceled, or processed.	**Explanation:** This message appears when a user navigates from the recent items link in the global area and the change order is either deleted, canceled, or processed. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055364	The search term can't begin with a wildcard character: percent sign (%) or underscore (_).	**Resolution note:** Enter a search term beginning with a normal character; move or remove the leading % or _ wildcard.
PO-2055366	The requisitioning configuration isn't defined for the business unit {REQ_BU}.	**Explanation:** The token REQ_BU represents the requisitioning business unit. **Resolution note:** Configure the requisitioning business function/options for the specified requisitioning BU, then retry the purchase order process.
PO-2055368	Another person modified the record you're attempting to update. Requery the results.	**Explanation:** Show message if the same record is updated by some other user. **Resolution note:** Review the affected purchase document and the validation condition stated in the message; correct the related data or setup, validate, and retry.
PO-2055369	The selected lines can't be reassigned together because they belong to different procurement business units for processing.	**Resolution note:** Reassign selected requisition lines in separate batches by procurement BU.
PO-2055370	The change request must include at least one new line.	**Explanation:** Shown when a user is trying to import purchase order changes without providing any line information to be imported. **Resolution note:** Add at least one new eligible line to the change request; if only existing lines need changes, use the appropriate update operation.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055376	The document didn't pass the funds check. Contact the buyer and provide budgetary control attempt identifier {DATA_SET_ID}.	**Explanation:** Shown when the budgetary control engine errors out and the logged in user is a supplier user. The token {DATA_SET_ID} shows the budgetary control attempt identifier used to call the budgetary control engine. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055377	The funds reserved on this purchase order can't be released. Contact the budget manager listed on the Funds Reservation page.	**Explanation:** Shown when user tries to final close a document and budgetary control engine cannot unreserve the funds. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055378	The financial orchestration flow isn't valid. Perform the Rebuild Account action on any associated distribution to derive a financial orchestration flow.	**Explanation:** Message is shown if the financial orchestration flow is invalid. It instructs the user to perform the Rebuild Account action. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055380	You can't reopen this record because the budgetary control process couldn't be completed. Contact the budget manager listed on the Funds Reservation page.	**Explanation:** Shown when the user tries to reopen a finally closed purchase order budgetary control engine failed. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055381	The document failed funds check. You should cancel the document if it's no longer needed.	**Explanation:** Shown when the budgetary control engine is not able to release funds from the purchase order. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055382	This schedule requires financial orchestration. Perform the Rebuild Account action on any associated distribution to derive a financial orchestration flow.	**Explanation:** Shown to user if financial orchestration flow does not exist on the schedule but one is required. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055383	A value for the {ATTRIBUTE_NAME} attribute couldn't be determined. Contact the Procurement application administrator.	**Explanation:** Shown when the user does not have privilege to enter the attribute value and the application was not able to derive a value for the attribute. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055384	You must enter either an item number or a supplier item number when using a document style that has configuration ordering enabled.	**Resolution note:** For configuration ordering, provide a valid item number or supplier item number.
PO-2055385	An item number is required when specifying a top model or parent item.	**Explanation:** Error is generated when Item is not provided, but a value is provided for parent item or Top Model. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055386	You can't change the carrier, mode of transport, or service level because the schedule is either shipped, received, or invoiced.	**Resolution note:** Shipping/carrier fields cannot be altered on shipped, received or invoiced schedules. Review downstream transactions before proposing a new order or schedule.
PO-2055387	You must enter a valid combination of carrier, mode of transport, and service level.	**Resolution note:** Choose a carrier, mode of transport and service level combination enabled for the shipping context.
PO-2055389	The requested purchase order line couldn't be located.	**Explanation:** Included in the purchase order web service output when line requested to be changed is not found. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055390	The requested purchase order schedule couldn't be located.	**Explanation:** This error is included in the output of the service if the service cannot locate the requester purchase order schedule on which certain action needs to be performed. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055395	You can't add requisition lines eligible for financial orchestration to a purchase order that's charged to a procurement card.	**Explanation:** Shown when the user tries to add a requisition line eligible for financial orchestration and having a procurement card reference to an existing purchase order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055396	An application error occurred. Contact your help desk.	**Explanation:** REASON token will have a message passed by budgetary control engine specifying the reason for the error. INCIDENT_SID is the incident identifier raised by budgetary control engine. DB_SERVER_NAME and DB_INSTANCE_NAME and the service and instance names on which the incident is logged. **Oracle user details:** Your help desk can use the following information to obtain a more detailed description of this incident: Incident ID: {INCIDENT_SID}, Server Domain: {DB_SERVER_NAME}, Server Instance: {DB_INSTANCE_NAME}. **Oracle administrator action:** Review this incident: Incident ID: {INCIDENT_SID}, Server Domain: {DB_SERVER_NAME}, Server Instance: {DB_INSTANCE_NAME}. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055397	The billing cycle closing date ({BILLING_CYCLE_CLOSING_DATE}) must be on or after the start date of the current billing period ({BILLING_START_DT}).	**Explanation:** User gets this error if the user tries to specify the Billing Cycle Closing Date that is prior to start date of the current billing period. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055398	You must enter a billing cycle closing date that's on or after {TODAY_DATE}.	**Explanation:** The billing cycle closing date for the next billing period cannot be in the past. It must be later than or equal to today. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055399	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this line to an existing order line because this line is for a configuration.	**Explanation:** The token REQ_NUM and REQ_LINE_NUM represents the requisition number and requisition line number respectively of the requisition line that cannot be added to a purchase order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055400	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't group this line with other lines because this line is for a configuration.	**Explanation:** The token REQ_NUM represents the requisition number and REQ_LINE_NUM the requisition line number of the requisition line that cannot be grouped. **Resolution note:** This requisition line cannot be grouped with the selected lines. Keep the information-template, service or configuration line separate as required.
PO-2055401	One or more requisition lines are in currency {REQ_CUR}. No conversion exists between this currency and the currency you selected.	**Explanation:** This message appears during the process of converting requisition lines into PO or Negotiation lines. If the buyer tries to change the currency of the PO or Negotiation that he wants to create, but no conversion rate exists to convert the requisition line prices, this message is shown. **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055402	The price can't exceed 10 decimal places.	**Explanation:** This message appears when the user provides a value for price that has greater than 10 decimal places. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055403	You can only perform this action on lines for configurations.	**Explanation:** This error displays if the buyer/supplier tries to access configuration details for a line item that isn't a configured product. **Resolution note:** Use the action only on configuration lines; select a supported configuration item or a different operation for standard items.
PO-2055404	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this requisition line to the document builder.	**Explanation:** The requisition line (REQ_LINE_NUM) of the requisition (REQ_NUM) cannot be added to the document because of the reason mentioned in user details. **Oracle user details:** Requisition lines for configurations can only be placed on a purchase order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055405	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The document style doesn't support procurement of configurations.	**Explanation:** This message appears if the buyer tries to place requisition lines for configurations onto a purchasing document whose style does not support the procurement of configurations. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055406	You can't duplicate this line because the item is a configuration.	**Resolution note:** Configured items cannot be duplicated directly. Create the needed configuration through the supported configuration flow.
PO-2055407	You can't duplicate a line associated with a work order.	**Explanation:** This message is displayed when user tries to duplicate a purchase order line associated with a work order. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055408	You can't duplicate this document because it contains one or more lines associated with work orders.	**Explanation:** This message is displayed when user tries to duplicate a purchase order which has one or more lines associate with work orders. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055409	The requested attachments couldn't be located.	**Explanation:** This message is displayed to the integrating application when they call the purchase request web service at the attachments are requested to be copied, but cannot be found. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055411	You can't release the hold or unfreeze the document because the purchase order isn't on hold or frozen.	**Explanation:** This message is returned via the purchase request web service to integrating applications when the integrating applications attempt to release a hold and unfreeze and the document is not on hold or frozen. **Resolution note:** Confirm the current hold, freeze or firm status before changing it; the requested transition is redundant or not applicable to the record.
PO-2055412	You can't hold or freeze the purchase order because the purchase order is already on hold or frozen.	**Explanation:** This message is returned to integrating applications when they attempt to place a document on hold or freeze a document that is already frozen or on hold. **Resolution note:** Confirm the current hold, freeze or firm status before changing it; the requested transition is redundant or not applicable to the record.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055413	You can't undo the firm action because the schedule isn't already firm.	**Explanation:** This error displayed when a user tries to undo a firm status on a schedule that is not firm. **Resolution note:** Confirm the current hold, freeze or firm status before changing it; the requested transition is redundant or not applicable to the record.
PO-2055414	You must provide either an order number or a requisition line number to perform the hold, freeze, release hold or unfreeze actions.	**Explanation:** This error is sent to the integrating application when they call the purchase request application without a po header unique identifier or requisition line unique identifier. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055415	You can't change the hold or freeze status on a purchase order schedule. You can only perform these actions on a requisition line or entire purchase order.	**Explanation:** This message can be displayed when integrating applications call the purchase request web service with the incorrect attributes for hold or freeze actions. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055416	You must provide a schedule number to perform the firm or undo firm action.	**Explanation:** This message is displayed when a planning performs a firm action, but does not provide a line location id. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055417	You can't change the firm status on a requisition line. You can only firm a purchase order schedule.	**Explanation:** This is a message that is displayed when Planning or Supply Chain Orchestration calls the purchase request web service attempting to firm the requisition line. You can only firm a purchase order schedule. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055418	One or more backing requisition lines must be externally managed for the requested operation.	**Explanation:** This message is display when an integrating application attempts to change a purchase order schedule that has a purchase order schedule that has a backing requisition that is NOT externally managed. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055419	The requested change order couldn't be located.	**Explanation:** This message will be displayed when the change order id for the integration application is not correct. This message is for the purchase request web service. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055420	You must provide either a schedule number or a requisition line number.	**Explanation:** This is message returned to an integrating application if they do not pass in either the requisition line id or the schedule id. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055421	You must provide a schedule number because the requisition line is on an implemented purchase order.	**Explanation:** This is an error message for the purchase request web service. It means that the integrating application does not have the latest content on their transaction. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055422	You must provide an order number because the requisition line is on an implemented purchase order.	**Explanation:** This error is displayed to integrating applications interfacing with the purchase request web service. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055423	You must provide a purchase order number if the base change order is provided.	**Explanation:** This message is displayed to the integrating application if they call the purchase request web service with the base change order sequence and not the purchase order header ID. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055425	You can't firm this schedule because the schedule is already firmed.	**Explanation:** This message is displayed when a user/integrating application attempts to firm a schedule that is already firmed. **Resolution note:** Confirm the current hold, freeze or firm status before changing it; the requested transition is redundant or not applicable to the record.
PO-2055427	You can't apply changes to a version of the document which has undergone subsequent revisions.	**Explanation:** Integrating applications will call purchase request web service with the latest change order sequence that they have on their transaction. if this sequence does not match the latest on the purchase order, we will return error. **Resolution note:** The purchase document has a newer revision. Refresh its current version and re-enter the intended changes against the latest version.
PO-2055431	You can't change project attributes because the order is already open with reserved funds.	**Explanation:** Included in the error XML when purchase order web service change operation is invoked and project attributes are changed on a purchase order and the requisitioning business unit of the purchase order is budgetary controlled. **Resolution note:** The distribution has downstream activity or a controlled status. Keep processed values unchanged and coordinate a supported correction with Finance.
PO-2055432	You can't reopen a canceled document, line, or schedule.	**Explanation:** Shown when the user is trying to re-open a canceled document, line or schedule. **Resolution note:** Canceled documents, lines and schedules cannot be reopened. Create a new eligible purchasing transaction if the requirement remains.
PO-2055433	You can't change an existing purchase order schedule to be back-to-back.	**Explanation:** Provide message when integrating applications request to change the back to back indicator to Yes on the purchase order schedule. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055434	You can't create new requisition lines for unfulfilled demand because the requisitioning business unit on the purchase order is budgetary controlled.	**Explanation:** Shown if user is trying to cancel a purchase order, line or schedule using an API or web service and indicates to reinstate the backing requisition but the requisitioning business unit on the purchase order is budgetary controlled. **Resolution note:** The requisitioning BU uses budgetary control; review the supported unfulfilled-demand and budget restoration flow rather than automatically creating replacement requisition lines.
PO-2055435	A unique value for the {ATTRIBUTE_NAME} attribute couldn't be determined.	**Explanation:** This message is used in web services and interfaces when the user provides a value for attribute from which the system needs to derive the ID. However, the system is unable to uniquely identify the attribute since the provided value matches multiple records. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055436	A value for the {ATTRIBUTE_NAME} attribute couldn't be determined.	**Explanation:** This error is thrown when PO web service or PDOI cannot uniquely determine an ID from the name and/or E-Mail provided for some attributes e.g. Buyer, Requester, Change Order Initiator. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055437	You can't provide a schedule number if the base change order is provided.	**Explanation:** This message is displayed when a integrating application calls the purchase request web service with a line location ID and base line change order sequence. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055438	You can't change or split a requisition line. You can only perform these actions on a purchase order schedule.	**Explanation:** This message is displayed to integrating applications when they try to split or cancel a requisition line. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055439	You can't add these requisition lines to the document builder because not all lines reference the same import source.	**Explanation:** This message appears when the buyer tries to add multiple requisition lines to the document builder with the intent to create a new purchasing document or add to an existing document, but the requisitions originate from different sources. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055440	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this requisition line to the document builder.	**Explanation:** The import source of the selected requisition line does not match with the import source of the requisition lines that are already in the document builder. **Oracle user details:** The import source on this requisition line doesn't match the import source of the requisition lines that are in the document builder. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055441	You can't change the aging onset point once lines have been added to the document.	**Explanation:** Message indicates that the user cannot change the attribute, Aging Onset Point, once the user has added lines to the document. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055442	The requested document couldn't be located either because a unique record doesn't exist or because you're using an older version of this service.	**Explanation:** The message is returned as an output of purchase order web service when the application is not able to find a document to perform the action being requested such as cancel or change. It requests the user to uptake the latest version of the purchase order service. **Oracle user details:** You should uptake the latest version of the purchase order service. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055443	You can't create project based rules because Oracle Fusion Project Costing isn't implemented.	**Explanation:** This message is displayed in the ADFDI workbook for buyer assignment rules when Oracle Fusion Project Costing is not implemented and user tries to create a project based rule. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2055444	You can't duplicate documents that are intended for procuring configurations.	**Explanation:** Purchase orders for procured configurations are created for a specific sales order created in an order management system. Buyers cannot create standalone purchase orders for these types of items. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055445	You can't increase the quantity on a purchase order schedule that will be shipped to a third party.	**Explanation:** This message appears if the buyer or supplier tries to increase the quantity for a line item that is reserved for a specific customer sales order. **Resolution note:** A back-to-back or third-party shipped quantity is controlled by the downstream order. Review fulfillment commitments before attempting to increase the PO quantity.
PO-2055446	You can't add lines to a purchase order that's reserved to fulfill a customer sales order.	**Explanation:** If a purchase order is associated with a customer sales order, the buyer should not be able to add additional lines to the order. **Resolution note:** The PO is reserved for a customer sales order. Do not manually add unrelated PO lines; process additional demand through the corresponding fulfillment flow.
PO-2055447	The {ATTRIBUTE_NAME} attribute can't be updated on a purchase order distribution that has a backing requisition line that's managed by an external application.	**Explanation:** Provide message when buyer request changes to customer attributes on purchase order distributions that reference backing requisitions that are externally managed. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055448	The requester doesn't have permission to update header level attributes.	**Explanation:** Provide message when integrating applications requests changes to header level attributes on the purchase order. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055449	You can't update the {ATTRIBUTE_NAME} attribute on a purchase order schedule that has a backing requisition line managed by an external application.	**Explanation:** Issue an error when the buyer creates a change order to change shipping and delivery information like ship-to location, deliver-to location, and so forth on order schedules that reference externally managed requisition lines. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055450	The destination type must be inventory for a back-to-back purchase order schedule.	**Explanation:** Issue error message if the destination type is not inventory on PO schedules that are reserved to fulfill a customer sales order (back to back orders). **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055451	You can't change an existing purchase order schedule to one that should be shipped to a third party.	**Explanation:** Provide message when integrating applications request change to reserve the purchase order schedule to be drop shipped to a third party. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055452	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this line to the existing order because this line originates from a different source application.	**Explanation:** This error message is displayed when the user attempts to add requisition lines with an interface source code that is different from what's on the existing order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055453	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this line to a negotiation because this line will be shipped to a third party.	**Explanation:** Requisition lines being shipped to a third party cannot be added to a negotiation. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055455	You can't access the catalog to update requisition lines that are managed by an external application.	**Explanation:** Buyers cannot replace a line item on a requisition that originated from an external application because those items were specifically requested by an end customer. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055456	You can't duplicate this document because one or more schedules are reserved to fulfill a customer sales order.	**Explanation:** This document cannot be duplicated as one or more of its schedule are reserved against a customer sales order. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055457	You can't duplicate this line because the underlying schedules are reserved to fulfill a customer sales order.	**Explanation:** This line cannot be duplicated as one or more of its underlying schedule are reserved against a customer sales order. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055458	You can't reference a source agreement with a transportation arrangement that differs from the purchase order.	**Explanation:** This message is displayed if the order has more than one line and user selects an agreement with a different Buyer managed transportation value via agreement LOV from the order. **Resolution note:** Align the PO transportation arrangement with the referenced source agreement, or select an agreement that supports the required arrangement.
PO-2055461	You can't increase the quantity on a purchase order line that will be shipped to a third party.	**Explanation:** This message appears if the buyer or supplier tries to increase the quantity on a purchase order line that is shipped to a third party. **Resolution note:** A back-to-back or third-party shipped quantity is controlled by the downstream order. Review fulfillment commitments before attempting to increase the PO quantity.
PO-2055462	An assignment record for the business unit {REQ_BU} already exists.	**Explanation:** This error message is generated when a user is creating or amending a purchase agreement through the open interface and the user is trying to create a new BU assignment record for a BU for which a record already exists. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055463	You can't delete an item that's associated with a procurement business object. This item is referenced by at least one {BUSINESS_OBJECT}.	**Explanation:** This error message is thrown when some one tries to delete an item and the item is referenced on one or more procurement transactions. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055464	A supplier item number is required when specifying a supplier top model or supplier parent item.	**Explanation:** This error is generated when supplier parent item or supplier top model is provided without specifying supplier item number. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055466	The document didn't pass the funds check. View funds check results to review the error details.	**Explanation:** The error message is shown to the user when the user rejects a document that is pending supplier acknowledgment and the budgetary control process returns a failure to release funds. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055470	You must enter either a requested date or a promised date for planned items.	**Explanation:** This message will be used in V2: You must enter either a requested date or a promised date for planned items. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055471	You can't request changes to schedules on a draft purchase order.	**Explanation:** This message is displayed when an integrating application attempts to change or perform a control action using the purchase request web service on a purchase order that is in the draft state. **Resolution note:** Schedule change requests are not supported for draft POs. Complete draft editing directly before submission, or use a later eligible document status.
PO-2055472	A purchase order can't be created because the requisition lines require different transportation arrangements.	**Explanation:** The buyer managed transportation values determined for all requisition lines should be the same, else this message will be displayed. **Resolution note:** Separate requisition lines by compatible transportation arrangements, or revise the source line arrangements where permitted.
PO-2055473	Requisition {REQ_NUM}, Line {LINE_NUM}: You can't add this line to an existing order because the transportation arrangements aren't the same.	**Explanation:** This message is displayed if the requisition line, added to an existing order, has a different predetermined buyer managed transportation value from the order header. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055476	Line {PO_LINE_NUM}: The configuration price couldn't be determined.	**Explanation:** Message appears when the base model can be sourced to a valid agreement, but the components that make up the configuration cannot be sourced to that same agreement. **Oracle user details:** Pricing information couldn't be found for some of the configuration components. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055477	Line {PO_LINE_NUM}: The configuration price couldn't be determined.	**Explanation:** When pricing configurations, the system adds the price of the base model to the extended price of the components that are part of the configuration. If this value is less than zero, this message is shown. Purchase orders cannot have negatively-priced lines. **Oracle user details:** Invalid pricing information has resulted in a negative price for the configuration. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055478	Line {PO_LINE_NUM}: The configuration price couldn't be determined.	**Explanation:** If the pricing API is used to retrieve the base model price from a blanket purchase agreement and the price is negative, display this error. The base model price must be zero or a positive number. **Oracle user details:** Invalid pricing information has resulted in a negative price for the base model. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055479	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The configuration price couldn't be determined.	**Explanation:** If the pricing API is used to retrieve the base model price from a blanket purchase agreement and the price is negative, display this error. The base model price must be zero or a positive number. **Oracle user details:** Invalid pricing information has resulted in a negative price for the base model. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055480	You can't update the promised ship date. The transportation arrangement must be buyer managed to update promised ship dates.	**Explanation:** Show this error when user is trying to update Promised Ship Date and the line type has purchase basis as Goods and Buyer managed transportation is null or set to false. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055481	The {ATTRIBUTE_NAME} attribute can't be changed when the change order initiator is a supplier.	**Explanation:** Show this error when the supplier attempts to update an attribute that they cannot update. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055482	You can't update the promised delivery date because the transportation arrangement is buyer managed.	**Explanation:** If the line type has purchase basis as Goods and buyer managed transportation is set to true, then show an error if the user attempts to update the Promised Delivery Date. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055484	You must enter a base model price that's less than the source agreement line price limit of {PRICE_LIMIT} {CURR}. The current base model price is {BASE_MODEL_PRICE}.	**Explanation:** The system provides this error if a user enters a base model price on a purchase order line that is greater than the price limit set on the agreement that is referenced on the purchase order line. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055489	The value of the attribute isn't valid for the assigned business unit {REQ_BU_NAME}.	**Explanation:** This message is recorded in the error report of the Import Agreement program when the value of an attribute is invalid for a BU assignment record. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055491	You can't order locally from the business unit {REQ_BU_NAME} because it isn't configured for the procurement business function.	**Explanation:** This error message is captured in the error report while importing BU assignment records for an agreement when a user wants to order locally from a BU which does not have the procurement business function assigned. **Resolution note:** The specified BU is not enabled for local procurement. Route the requisition to an eligible procurement BU or enable procurement functions through configuration.
PO-2055492	You can't change the line attachments because the line contains other schedules.	**Explanation:** This message is displayed if a integrating application attempts to change the attachments at the line level and the line has more than one schedule. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055493	You don't have permission to create approved purchasing documents.	**Explanation:** Message is shown when a user invokes the purchase order web service to create or change a purchase order and then chooses to bypass approval but the user does not have appropriate privilege to do so. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055494	The procurement business function couldn't be configured for the business unit {PRC_BU_NAME}. The process was terminated.	**Explanation:** If the procurement business function could not be configured for some reason, this message is published in the output file of the ESS process Define Basic Enterprise Structure for Procurement. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055495	Business units configured for this procurement business function already exist. The process was terminated.	**Explanation:** If one or more business units with a procurement business function configuration already exist, this message is published in the output file of the ESS process Define Basic Enterprise Structure for Procurement. **Resolution note:** Review existing BU procurement-function setup before rerunning the setup process; do not attempt to create a duplicate configuration.
PO-2055496	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't group this line with other lines because the line contains attachments with additional product details.	**Explanation:** This message appears if the buyer tries to combine multiple requisition lines and one of the lines has attachments provided by an external application. The token REQ_NUM and REQ_LINE_NUM represent the requisition number and requisition line number respectively that cannot be combined with another line. **Resolution note:** The line has additional product-detail attachments that prevent consolidation. Keep it on a separate PO line.
PO-2055497	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't add this line to an existing line because the line contains attachments with additional product details.	**Explanation:** This message appears if the buyer tries to add a requisition line that has attachments provided by an external application to an existing order line. A new line needs to be created as the lines cannot be combined. The token REQ_NUM and REQ_LINE_NUM represent the requisition number and requisition line number respectively that cannot be added to a purchase order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055498	The rounding factor must be between zero and one.	**Explanation:** When the input rounding factor value is not between 0 and 1, show this error. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055499	You must enter a price that's below {PRICE_LIMIT} {CURR} for the {ITEM_DESCR} component. The current price is {COMPONENT_PRICE} {CURR}.	**Explanation:** This message is shown when the user tries to approve a purchase order and the price of one of the configuration components exceeds the price limit on the blanket purchase agreement the component references. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055500	The configuration price couldn't be determined. Invalid pricing information has resulted in a negative price for the base model.	**Explanation:** This message appears in the web service response payload if the pricing API is used to retrieve the base model price from a blanket purchase agreement and the price is negative. The base model price must be zero or a positive number. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055501	The configuration price couldn't be determined. Invalid pricing information has resulted in a negative price for the configuration.	**Explanation:** This message appears in the web service response payload. When pricing configurations, the application adds the price of the base model to the extended price of the components that are part of the configuration. If this value is less than zero, this message appears. Purchase orders cannot have negatively-priced lines. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055502	The destination type must be either expense or drop ship because inventory isn't implemented.	**Explanation:** If the inventory product offering is not implemented, then the destination type must be either expense or drop ship. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055503	You can't change the overreceipt action or overreceipt tolerance percentage on a purchase order schedule that will be shipped to a third party.	**Explanation:** This message appears if a buyer tries to change the overreceipt action or tolerance on a purchase order schedule that is reserved to a customer sales order that is being drop shipped. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055504	The requisition line wasn't processed into a purchase order because the source agreement is currently not open for new orders.	**Explanation:** Shown when the application cannot automatically convert a requisition line into a purchase order because the source agreement is not open. For example the agreement is canceled, on hold, or finally closed. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055505	The requisition line wasn't processed into a purchase order because the supplier site doesn't have an active assignment in the requisitioning business unit.	**Explanation:** The application cannot automatically convert a requisition line into a purchase order because the supplier site does not have an active assignment in the requisitioning BU. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055506	The requisition line wasn't processed into a purchase order because the source agreement is no longer enabled for use by the requisitioning business unit.	**Explanation:** This message is displayed when the application cannot automatically convert a requisition line into a purchase order because the source agreement is no longer enabled for use by the requisitioning BU. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055507	The requisition line wasn't processed into a purchase order because the supplier is inactive.	**Explanation:** The supplier must be active for the application to automatically convert a requisition line into a purchase order. **Resolution note:** Verify that the supplier and supplier site are active, valid for the purchasing BU and effective on the transaction date; select the correct record and retry.
PO-2055508	The requisition line wasn't processed into a purchase order because the buyer is no longer an active agent.	**Explanation:** The specified buyer must be an active agent for the application to automatically convert a requisition line into a purchase order. **Resolution note:** Assign the requisition line to an active procurement agent/buyer with access to the responsible procurement BU, then reprocess.
PO-2055509	The requisition line wasn't processed into a purchase order because a purchase order already exists with the number reserved for the emergency requisition.	**Explanation:** This message is displayed when the application cannot automatically convert a requisition line into a new purchase order because a purchase order already exists with the number reserved for the emergency requisition. The buyer has to either manually add the requisition line to the existing PO or create another PO for the request (which will have a different number than the one on the emergency requisition). **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055510	The requisition line wasn't processed into a purchase order because a supplier and site couldn't be determined.	**Explanation:** This message is shown when the application could not identify a valid supplier and supplier site to be used to automatically convert a requisition line into a purchase order. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055511	The requisition line wasn't processed into a purchase order because it must be financially orchestrated and isn't eligible for procurement card use.	**Explanation:** Shown when the application cannot automatically convert a requisition line into a purchase order because is not eligible for procurement card use as it requires financial orchestration. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055512	The requisition line wasn't processed into a purchase order because the supplier site doesn't accept procurement cards.	**Explanation:** This message is displayed when the application cannot automatically convert a requisition line into a purchase order because the supplier site is not configured to accept procurement cards. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055513	The requisition line wasn't processed into a purchase order because a buyer couldn't be determined.	**Explanation:** This message is shown when the application could not identify the buyer in order to automatically convert a requisition line into a purchase order. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055514	The requisition line wasn't processed into a purchase order because the requested item isn't purchasable in the inventory organization of the procurement business unit.	**Explanation:** Displayed when the application cannot automatically convert a requisition line into a purchase order because the requested item is not purchasable in the default inventory organization of the procurement business unit. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055515	The requisition line wasn't processed into a purchase order because the specified procurement card isn't valid.	**Explanation:** This message is displayed when the application cannot automatically convert a requisition line into a purchase order because the specified procurement card is not valid. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055516	The requisition line wasn't processed into a purchase order because it requires a negotiation.	**Explanation:** Shown when the application cannot automatically convert a requisition line into a purchase order because it specified that is requires a negotiation and none can be found. **Resolution note:** The requisition line must go through sourcing. Create or complete the required negotiation and then create the purchasing document from the awarded result.
PO-2055517	The requisition line wasn't processed into a purchase order because the source agreement is no longer effective.	**Explanation:** This message is displayed when the application cannot automatically convert a requisition line into a purchase order because the current date is not within the start and end dates specified on the referenced agreement. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055518	The requisition line wasn't processed into a purchase order because the supplier site is inactive.	**Explanation:** This message is displayed when the application cannot automatically convert a requisition line into a purchase order because the supplier site on the requisition line is no longer active. **Resolution note:** Verify that the supplier and supplier site are active, valid for the purchasing BU and effective on the transaction date; select the correct record and retry.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055519	The requisition line wasn't processed into a purchase order because the source agreement line expired.	**Explanation:** This message is shown when the application cannot automatically convert a requisition line into a purchase order because the referenced source agreement line has expired. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055521	The requisition line wasn't processed into a purchase order because the price isn't negotiated.	**Explanation:** Displayed when the application cannot automatically convert a requisition line into a purchase order because the price was specified to be negotiated and no negotiation exists. **Resolution note:** Verify negotiated price flag, supplier sourcing and price setup on the requisition/agreement; complete required price negotiation before automated PO creation.
PO-2055525	You must have a valid account with the signature solution provider {SIGN_PROVIDER_NAME} to send documents for signature.	**Explanation:** The user who prepares the documents for signature or performs Manage Signature action on the document does not have a valid e-mail address, or is not configured as a user of the electronic signature provider application. **Resolution note:** Ensure the signature provider account is valid and configured for the purchasing organization; reauthenticate or correct the signature integration before sending.
PO-2055527	You can propose changes on documents pending supplier acknowledgment only if schedule level acknowledgment response is required.	**Explanation:** Display the error message if supplier attempts to propose changes on a PO/CO which is not pending acknowledgment at the document and schedule level. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055530	The document style doesn't support procurement of outside processing items.	**Explanation:** The user is attempting to import a blanket agreement and have specified a document style. The specified document style does not support outside processing items and so an error must be displayed. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055531	The document style can be enabled for configuration ordering, consignment terms, or outside processing, but not any combination of these.	**Explanation:** When defining document styles, if the user tries to create a document style that can be used to purchase both consigned items and/or, configurations, and/or OSP, they will receive this error because this style is not supported. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055532	You can't duplicate an outside processing line.	**Explanation:** This error is displayed when trying to duplicate a po line with an outside processing item. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055533	You can't duplicate this document because one or more lines are for an outside processing item.	**Explanation:** This error is displayed when trying to duplicate a po with outside processing items. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055535	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The document style doesn't support procurement of outside processing items.	**Explanation:** This message is displayed in the process requisition lines UI when you attempt to add an outside processing requisition line to the document builder when the style in the document builder does not support outside processing. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055537	You can't edit this change order because it's pending signature processing.	**Explanation:** This error is displayed when user tries to edit a change order which is either pending signature preparation or sent for signature. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055538	You can't withdraw or cancel this change order because it was sent for signature.	**Explanation:** This error is displayed when a requester or supplier user tries to withdraw or cancel a change order which is in sent for signature status. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055539	You can't cancel this document because a pending change order was sent for signature.	**Explanation:** This error is displayed when a requester or supplier user tries to cancel a document which has a pending change order in Sent for Signature status. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055540	You must enter a quantity as a positive number.	**Explanation:** Error message to indicate that purchase order schedule quantity must be positive. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055541	You must acknowledge all schedules of order {ORDER_NUM}.	**Explanation:** This message is displayed in the Acknowledge Schedules ADFDI workbook when supplier tries to submit acknowledgment for an order missing a response on one or more of its schedules. **Resolution note:** Acknowledge each schedule for the specified PO, not only selected lines, then submit the complete acknowledgment.
PO-2055542	You must enter a rejection reason for a schedule before you can reject it.	**Explanation:** This message is displayed in the Acknowledge Schedules ADFDI workbook when supplier tries to reject an order schedule without justification. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055543	Order {ORDER_NUM}, Line {LINE_NUM}, Schedule {SCHEDULE_NUM}: {ERROR_MESSAGE}	**Explanation:** Generic message which indicates that a purchase order schedule acknowledged using ADFdi spreadsheet contains error. The token {ERROR_MESSAGE} identifies the nature of the error. The message in the token always includes a period (full stop), so no full stop should be required in this message. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055545	You don't have permission to finally close a schedule.	**Explanation:** The error displayed when a user tries to final close a schedule from spreadsheet but does not have the appropriate privilege to perform the action. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055546	You don't have permission to close a schedule.	**Explanation:** This error is displayed when a user tries to close a schedule from spreadsheet but does not have the associated privilege to perform the function. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055547	The schedule can't be finally closed because the distribution budget date is after the carry-forward cutoff date.	**Explanation:** This message is returned by the purchase order final close API when called by the period end carry-forward process. If the distribution budget date is after the carry-forward cutoff date, the schedule cannot be finally closed and users are notified so they can fix the issue manually. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055548	Your request couldn't be approved. Contact your help desk.	**Explanation:** When a purchase order is submitted for approval the application creates a human task to seek approval. If the approval task creation fails the application raises an incident explicitly. The incident number and related information are stored in the task payload. The purchase order is rejected and a notification is sent to the buyer. This message is also shown in the notification. The application grabs the incident information from the payload and exposes them using the tokens. Additional information about the specific occurrence of the error within the task is provided in the form of a stack trace. This information is included in the notification that is sent to the end user, so that they can provide the reference to the help desk with the incident information to help them troubleshoot. Most likely cause is an incorrect approval rule setup. This can be diagnosed by the help desk or Oracle Support by using the incident information from the notification. **Oracle user details:** Your help desk can use this information to get a more detailed description of this incident: Incident ID: {INCIDENT_NUM}, Server Domain: {DB_SERVER_NAME}, Server Instance: {DB_INSTANCE_NAME}, Application Name: {APPLICATION_NAME}, Additional Information: {ADDITIONAL_INFO}. **Oracle administrator action:** Review this incident: Incident ID: {INCIDENT_NUM}, Server Domain: {DB_SERVER_NAME}, Server Instance: {DB_INSTANCE_NAME}, Application Name: {APPLICATION_NAME}, Additional Information: {ADDITIONAL_INFO}. Check database and application server logs. Restart server if necessary. If it isn't a hardware or code failure issue, and you suspect it's an incorrect setup issue, contact the procurement applications administrator to investigate and correct the setup parameters. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055550	You can't add these requisition lines to the document builder.	**Explanation:** As the application is configured to copy descriptive flexfields from requisitions to purchase orders, the requisition lines added to the document builder must belong to the same requisition when creating a new order. **Oracle user details:** Your application is configured to copy descriptive flexfields from requisitions to purchase orders. As a result, a purchase order can't process requisition lines from more than one requisition. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055552	The accounts couldn't be determined because the transaction account definition {TRAN_ACCT_DEFIN} isn't active.	**Explanation:** Indicates that a transaction account definition is not currently active and the accounts could not be determined. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055553	The accounts couldn't be determined because the ledger {LEDGER_NAME} doesn't have an assigned transaction account definition.	**Explanation:** Indicates that a ledger does not have an assigned transaction account definition and the accounts could not be determined. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055554	The account for account type {ACC_TYPE} couldn't be determined because there are no mappings for the mapping set {MAPPING_SET_NAME}.	**Explanation:** Indicates that there are no mappings for a mapping set, so the account could not be determined. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055555	The account for account type {ACC_TYPE} couldn't be determined because the mapping set {MAPPING_SET_NAME} doesn't have a matching row.	**Explanation:** Indicates that a mapping set does not have a matching row, so the account could not be determined. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055556	The accrual account combination can't be used because it isn't a liability account.	**Explanation:** The account the user entered must be a liability account to use as an accrual account. **Resolution note:** Use a valid liability account for the accrual account combination. Correct account derivation in the applicable setup with Finance.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055558	The account combination for account type {ACC_TYPE} doesn't exist.	**Explanation:** The account combination the user entered does not exist in the general ledger. **Resolution note:** Create or correct the required code combination for the specified account type, and validate account rules and business unit setup.
PO-2055559	The account combination for account type {ACC_TYPE} can't be used because it doesn't allow detailed posting.	**Explanation:** The account the user entered does not allow detailed posting. **Resolution note:** Choose or derive an enabled posting-level account combination; summary-only accounts cannot be used for transactional distributions.
PO-2055560	The account combination for account type {ACC_TYPE} can't be used because it's disabled.	**Explanation:** The account is defined in the general ledger but it is disabled. **Resolution note:** Enable the appropriate account combination through Finance controls or select another active valid combination.
PO-2055561	The account combination for account type {ACC_TYPE} can't be used because the balancing segment {BALSEG_NUM} isn't assigned to the ledger {LEDGER_NAME}.	**Explanation:** For this account type, the account the user entered has an invalid balancing segment for the ledger associated with the business unit that owns the purchase order. **Resolution note:** Confirm balancing segment to ledger assignments and the derived account segments with Finance, then correct the distribution.
PO-2055562	You must enter an end date that's after the date when the most recent order was opened.	**Explanation:** This message appears if a user tries to update the end date of a purchase agreement to a date that precedes open purchase orders referencing the agreement. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055563	A currency conversion isn't defined between the document currency ({DOC_CUR}) and the source agreement currency ({AGR_CUR}) for the agreement {AGR_NUM}.	**Explanation:** The currencies in the purchase order and source agreement are different and a currency conversion does not exist between the currencies. **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055564	You must cancel the unfulfilled demand to cancel purchase orders that are subject to budgetary control.	**Explanation:** This error message is displayed when a user chooses to reinstate the backing requisition while canceling a complex work purchase order that is subject to budgetary control. This is a REST message. **Resolution note:** Under budgetary control, cancel the linked unfulfilled demand through the supported option before attempting to cancel the PO.
PO-2055565	You can't create requisition lines for unfulfilled demand because encumbrance accounting is enabled for the requisitioning business unit.	**Explanation:** Shown if encumbrance accounting of the requisitioning business unit is enabled or the purchase order is budgetary controlled, and the user is trying to cancel a purchase order, line or schedule using an API or web service. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055568	You can't communicate an internal change order.	**Explanation:** Only external change order is allowed to be communicated. Internal change order can't be communicated. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055569	You can't communicate the document because the current version of the document has been communicated.	**Explanation:** The current version of the document has been communicated, so the user cannot communicate the document again. **Resolution note:** The current document revision has already been sent to the supplier. Communicate only a newly approved change or another eligible version.
PO-2055572	You can't communicate the document because the supplier site isn't enabled for communication using electronic messages.	**Explanation:** The supplier site is not enabled for electronic message communication, so you can't communicate the document. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055573	You can only communicate the document when it has been processed, or is in pending acknowledgment, pending signature preparation, or sent for signature status.	**Explanation:** Documents in the following status can be communicated. (Processed, Pending Acknowledgment, Pending Signature Preparation and Sent for Signature) **Resolution note:** Communicate the PO only after it reaches a supported status (processed, pending acknowledgment/signature preparation, or sent for signature).
PO-2055574	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: Creating a negotiation for lines shipped to a one-time location is currently not supported.	**Explanation:** This is an error message that appears while creating a negotiation for lines shipped to a one-time location which is currently not supported. **Resolution note:** Negotiations for requisition lines delivered to a one-time location are not supported by this path. Use a supported permanent location or separate process.
PO-2055577	You can't change the item description because the source agreement line doesn't allow it.	**Explanation:** This message applies to the purchase order import program. If the source agreement line does not allow update of the item description, and the user specifies a value in the import template, this error will be shown. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055579	The procurement business unit isn't valid.	**Explanation:** This error appears during the Import Purchase Agreements process if the provided procurement business unit is not valid. **Oracle user details:** Verify that the business unit is active, has the procurement business function enabled, and that the user is allowed to manage purchase agreements for this business unit. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055580	The supplier site isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the provided supplier site is not valid. **Oracle user details:** Verify that the site is active, has the purchasing purpose assigned, is associated with the procurement business unit, and has an active assignment for the requisitioning business unit. **Resolution note:** Verify that the supplier and supplier site are active, valid for the purchasing BU and effective on the transaction date; select the correct record and retry.
PO-2055581	The requisitioning business unit isn't valid.	**Explanation:** This error appears during the Import Purchase Agreements/Import Purchase Orders process if the provided requisitioning business unit is not valid. **Oracle user details:** Verify that the business unit is active, has the requisitioning business function enabled, and is identified as a client of the procurement business unit. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055582	The supplier isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the provided supplier is not valid. **Oracle user details:** Verify that the supplier is active, has a business relationship that's spend authorized, and has at least one active purchasing site associated to the procurement business unit. **Resolution note:** Verify that the supplier and supplier site are active, valid for the purchasing BU and effective on the transaction date; select the correct record and retry.
PO-2055583	The supplier isn't valid.	**Explanation:** This error appears during the Import Purchase Agreements process if the provided supplier is not valid. **Oracle user details:** Verify that the supplier is active and has a business relationship that's spend authorized. **Resolution note:** Verify that the supplier and supplier site are active, valid for the purchasing BU and effective on the transaction date; select the correct record and retry.
PO-2055584	You must enter a valid charge account.	**Explanation:** The value of the charge account distribution attribute is not valid. **Oracle user details:** Possible reasons for this issue include an incorrect ship-to organization, missing mapping set entries, or incorrect accounts that defaulted from the account rules. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055585	The ship-to organization isn't valid.	**Explanation:** The value of the ship-to organization schedule attribute is not valid. **Oracle user details:** Possible reasons for this error are that the item or its revision isn't purchasable in the ship-to organization, the parent business unit of the ship-to organization isn't a client of the procurement business unit, or the ship-to organization is a logistics service provider. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055586	The requester isn't valid.	**Explanation:** The value of the requester distribution attribute is not valid. **Oracle user details:** Verify that the requester name and email match the ones entered in the Oracle Human Capital Management Cloud, and that the correct name format is used. For example, use John Smith instead of Smith, John. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055588	The price change exceeds the price change tolerance percentage specified on the item definition.	**Explanation:** This error appears during the purchase order submission process when a price change exceeds the price tolerance percentage specified on the item definition. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055590	The item definition doesn't allow a value of Y for this attribute.	**Explanation:** The attribute can't be set to Y on the blanket purchase agreement line because the item definition does not allow it. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055594	You can't cancel a line while order management is processing a change. Also, you can't cancel a line or the schedule for configured item, kit, or shipment set.	**Explanation:** The user cannot cancel this record **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055595	You can't change this schedule in procurement.	**Explanation:** You can change the schedule if following conditions are met **Oracle user details:** If the line is part of a configured item, kit, or shipment set, then you must group all lines into a single purchase order. If you revise the delivery date, shipment date, or shipping method on the line in procurement, then your revision must use the same values on each line that's part of the item, kit, or set. If procurement splits a schedule, then you can't increase the quantity on the schedule. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055596	Supplier and supplier site changes must be initiated from the associated sales order.	**Explanation:** The supplier and supplier site values can be changed only if the change is initiated on the associated sales order. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055599	Schedules for project-related purchases with inventory destinations can have only one distribution.	**Explanation:** Displayed in the FBDI error report. If a schedule has an inventory destination type and any distribution has a project reference, the schedule can only have one distribution. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055600	You can't enter a project reference for this distribution because inventory tracking by project is disabled for the destination organization {DEST_ORG}.	**Explanation:** Displayed in the FBDI error report when the user uploads a distribution with a project reference, but inventory tracking by project is disabled for the destination organization. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055601	You must enter a discount amount that's between 0 and the base price.	**Explanation:** This error message appears during the purchase order creation process when a discount amount entered for a line exceeds the base price of the item or service. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055602	You can't enter a project reference for a consignment purchase order line.	**Explanation:** Project references are not supported for consignment purchase order lines. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2055603	You can't increase the quantity of this schedule because inventory tracking by project is disabled for the inventory organization.	**Explanation:** The message is displayed when the user tries to increase the quantity for a specified schedule with a project reference, but inventory tracking by project is disabled for the inventory organization. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2055605	Price can't be updated on a purchase order line that has a discount applied.	**Explanation:** The system provides this error if a user updates a price on a change order through POWS for a PO having discount. **Resolution note:** Review the affected purchase document and the validation condition stated in the message; correct the related data or setup, validate, and retry.
PO-2055609	You don't have permission to cancel the purchase order.	**Explanation:** The message is displayed when a requester who doesn't have permission to change or cancel a purchase order, tries to cancel a requisition linked to a purchase order from the Self Service Procurement UI. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055610	An approved document that was later rejected or withdrawn can't be resubmitted. Create a change order and then resubmit the document.	**Explanation:** The error is displayed when resubmitting an approved document that was later rejected or withdrawn. To proceed, create a change order using the Oracle Cloud Purchasing application and then resubmit the document. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055612	Requisition {REQNO}, Line {REQLINENO}: Requisition lines shipped to a third party can only be added to a purchase order that hasn't been submitted for approval.	**Explanation:** This error message is displayed when the user attempts to add requisition lines with a drop shipment customer sales order reference to an existing purchase order that has already been submitted for approval. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055613	A discount type and a discount value must be provided to specify a discount for a line.	**Explanation:** This error message will be displayed during the purchase order import process using FBDI if one of the values for a discount type and a discount value is missing. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055615	The attribute can't exceed the following decimal places: {DISCOUNT_PRECISION_NUM}.	**Explanation:** The error message is displayed during the purchase order import process using FBDI if the precision value for the entered discount exceeds the predefined limit. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055616	The discount can't be applied because the source agreement line doesn't allow price override.	**Explanation:** The error message is displayed during the purchase order import process using FBDI when the discount is applied to a line, and the line refers to a blanket agreement line that doesn't allow price override. **Resolution note:** Discounts would override fixed pricing on the source agreement line. Remove the discount or amend the agreement through the authorized pricing process.
PO-2055617	The discount amount must be between zero and the price.	**Explanation:** The error message is displayed during the purchase order import process using FBDI when a discount amount entered for a line exceeds the price of the item or service. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055618	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can add lines with work order references only to a purchase order that hasn't been submitted for approval.	**Explanation:** This message displays when the buyer tries to add a requisition line with a work order reference to an open purchase order. Instead, they need to create a new order or add to a draft order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055619	The value for the {ATTR_NAME} attribute isn't valid because the attribute is associated with a feature that requires opt in. Feature name: {FEATURE_NAME}.	**Explanation:** This message is used when an opt-in attribute is available in FBDI, ADFdi, or REST. Opt-in attributes are attributes that are associated with features that require opt in. If a user puts a value in an opt-in attribute but has not opted in to the corresponding feature, then when the user attempts to import or create data, the user will see this error message. **Oracle user details:** Remove the attribute value and try again. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055621	The master contract associated with the document is no longer valid.	**Explanation:** The error message is displayed when a user tries to submit a purchasing document that's associated with a master contract, and the master contract is no longer valid. **Oracle user details:** The master contract is no longer valid because either it isn't active or the party on the contract has changed. **Resolution note:** Validate that the referenced master contract is active and effective; select a valid contract or resolve the contract status before proceeding.
PO-2055622	You don't have permission to perform corrective actions on purchase orders.	**Explanation:** The error message is shown in REST response when the user who invokes the communicate, renumber or submit REST purchase order POST actions doesn't have access to Resolve Purchasing Document function security privilege. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055623	You don't have the required permission. You must either be defined as an agent for the procurement BU, or have permission to update other agents' documents.	**Explanation:** The error message is shown in REST response when the user who invokes the close action is not the owner of the purchase order or doesn't have full access to other agents documents. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055624	You must enter a valid master contract number.	**Explanation:** This error message is displayed when the user enters an invalid master contract number during the purchasing document import process using FBDI. These are the possible reasons for this error: the master contract isn't active, the combination of the master contract and contract type doesn't exist for this supplier, the contract type supports lines, or the contract doesn't have a buy intent. **Oracle user details:** These are the possible reasons: the master contract isn't active, the combination of the master contract and contract type doesn't exist for this supplier, the contract type supports lines, or the contract doesn't have a buy intent. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055625	You must provide a contract type because multiple master contracts exist.	**Explanation:** The error message is displayed when the user during the purchasing document import process using FBDI enters a master contract number, and a duplicate master contract number exists in Enterprise Contract Management. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055626	You must provide a master contract number with the contract type.	**Explanation:** This error message is displayed during the purchasing document import process using FBDI when the user enters a contract type but master contract number is not provided. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055627	You must provide a valid master contract type.	**Explanation:** This error message is displayed during the purchasing document import process using FBDI when the user enters a invalid contract type. **Oracle user details:** Either the contract type supports lines or the contract type doesn't exist. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055628	The maximum retainage amount {MAX_RETAINAGE_AMOUNT_NUM} must be greater than or equal to the amount retained {RETAINAGE_WITHHELD_NUM}.	**Explanation:** If the user changes the maximum retainage amount set on the schedule, it can't be lower than the retainage amount that has already been retained on the invoice. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055630	The price can't be updated on a purchase order line that has a configuration item.	**Explanation:** This error message is displayed when the user tries to update the price on a purchase order line having configuration item. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055631	The charge account can't be updated because either the PO schedule is associated with a financial orchestration flow or the destination type isn't Expense.	**Explanation:** This message is needed when the buyer or a REST integration user is updating a purchase order through a REST service. You can only update the charge account for an expense destination. Further more, when an SFO flow exists for a purchase order schedule, the destination charge account should be updated instead of the charge account. This error message is displayed when the user tries to update the charge account when either the PO schedule is associated with a financial orchestration flow or the destination type isn't Expense. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055632	The project details for the destination type {DEST_TYPE} can't be updated on a purchase order using REST services.	**Explanation:** This message is needed when the buyer or a REST integration user is updating a purchase order through a REST service. You can update project details only for expense destination using the REST service. This error message is displayed when the user tries to update the project details on a purchase order distribution for destination type other than expense. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055633	The charge account can't be updated because the Account Updates Allowed on Project-Related Distributions profile option isn't enabled.	**Explanation:** This message is needed when the buyer or an REST integration user is creating or updating a purchase order through a REST service. The PJC profile PJC_ALLOW_ACCOUNT_OVERRIDE (Account Updates Allowed on Project-Related Distributions)controls whether changes to charge account is allowed when a purchase order for expense destination contains project details. This error message is displayed when the user tries to update the charge account when the profile option PJC_ALLOW_ACCOUNT_OVERRIDE is set to no. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055634	The buyer isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the provided buyer isn't valid. **Oracle user details:** Verify that the buyer is an active user, is an active procurement agent, matches the name format used in the Oracle Human Capital Management Cloud, and is allowed to manage purchasing documents for the procurement business unit. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055635	The source agreement isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the provided source agreement isn't valid. **Oracle user details:** Verify that the source agreement is open, its effective end date is either blank or in the future, it has an active assignment for the requisitioning BU, and the supplier site and the supplier is the same as on the purchase order. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055636	The bill-to business unit isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the provided bill-to business unit isn't valid. **Oracle user details:** Verify that the bill-to BU is active, has the payables invoicing business function assigned, has an active service provider relationship with the Procurement BU, and is assigned to the same ledger as the Sold-to LE. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055637	The item isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the provided item isn't valid. **Oracle user details:** Verify that the item is defined in the item master and is purchasable in either the Ship-to Organization or the default Inventory Organization of the Procurement BU. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055638	The sold-to legal entity isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the provided sold-to legal entity isn't valid. **Oracle user details:** Verify that the sold-to legal entity is assigned to the ledger of the requisitioning BU. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055639	The UOM isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the provided UOM isn't valid. **Oracle user details:** Verify that the interclass conversions between UOM specified on the line and standard UOM for the item are valid. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055640	The supplier contact isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the provided supplier contact is not valid. **Oracle user details:** Verify that the name of the supplier contact is in the correct format for your country. **Resolution note:** Verify that the supplier and supplier site are active, valid for the purchasing BU and effective on the transaction date; select the correct record and retry.
PO-2055641	You must provide a date for the {ATTRIBUTE_NAME} attribute that's within the start and end date of the source agreement that's referenced on the corresponding PO line.	**Explanation:** This message is needed when the buyer or a REST integration user is updating the requested delivery or requested shipping date on a PO schedule through a REST service. We currently do not support source agreement reference during create or update of a PO in REST. This message will be displayed when the requested date provided for update doesn't fall within the start and end date of the source agreement that is referenced on the corresponding PO line. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055642	You can't enter retainage rate or maximum retainage amount because the document style doesn't support retainage terms.	**Explanation:** This error message appears when creating a purchase order with Retainage Rate or Maximum Retainage Amount attributes through FBDI or REST, but the document style of the purchase order is not Retainage Enabled. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055643	You must enter a percentage that's between 0 and 100% for the {ATTRIBUTE_NAME} attribute.	**Explanation:** When entering Retainage Rate (%), number should be between 0 and 100. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055648	You can't cancel this record because invoiced or received schedules exist.	**Explanation:** User can't cancel order header/line because some schedule has been fully or partially (after opt in) invoiced or received. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055649	You can't cancel this record because invoiced or delivered distributions exist.	**Explanation:** User can't cancel order/line/schedule because some of the distributions have been fully delivered or invoiced. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055650	You can't cancel an invoiced or received schedule.	**Explanation:** The user can't cancel a schedule that is fully invoiced or received. After opt in, they can't cancel schedules that are partially invoiced or received either. They can take the alternative actions described in the user details. **Oracle user details:** If the schedule is partially invoiced or received, reduce the ordered amount or quantity to match the total invoiced or received. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055651	The ship-to location isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the ship-to location is not valid. **Oracle user details:** Verify that the location is a Ship-to Site and is included in the location set for the requisitioning BU. The associated inventory organization, if there is any, must be the schedule's ship-to organization. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055652	The deliver-to location isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the deliver-to location is not valid. **Oracle user details:** Verify that the location is included in the location set for the requisitioning BU. The associated inventory organization, if there is any, must be the schedule's ship-to organization. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055653	You can't provide a value for the destination subinventory because the destination type is expense.	**Explanation:** This message is displayed when a user provides a value for the attribute subinventory and the destination type on that schedule is expense. **Resolution note:** Expense destinations do not use destination subinventories. Remove the subinventory or change to an eligible inventory destination.
PO-2055654	The {ATTRIBUTE_NAME} attribute can't be provided for a service line.	**Explanation:** This message is displayed in REST services when an attribute value which is invalid for a fixed price service line is provided in the payload. **Resolution note:** Remove the specified unsupported attribute from the service line, or use a supported line type.
PO-2055655	You can provide the {ATTRIBUTE_NAME} attribute only if the transportation arrangement is managed by buyer.	**Explanation:** This message is displayed when the user tries to provide promised ship date or requested ship date for a purchase order schedule using a REST service when the line type has purchase basis as Goods and buyer managed transportation check box is not selected. **Resolution note:** Populate this transportation attribute only when the arrangement is Buyer Managed; otherwise omit it or align the arrangement.
PO-2055656	You can't provide promised delivery date because the transportation arrangement is managed by buyer.	**Explanation:** This message is displayed when the user tries to provide promised delivery date for a purchase order schedule using a REST service when the line type has purchase basis as Goods and buyer managed transportation check box is selected. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055657	You must provide the {ATTRIBUTE_NAME} attribute to create a change order on the approved purchase order.	**Explanation:** This message is displayed when the user tries to create a change order on an approved purchase order without providing change order description in REST Services. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055658	You can provide the {ATTRIBUTE_NAME} attribute only for approved purchase orders.	**Explanation:** This message is displayed in REST services when change order attributes like change order description or change order initiating party is provided in the payload for incomplete purchase orders or purchase orders that are withdrawn from or rejected during the approval process. **Resolution note:** Use the attribute only on approved purchasing documents of the supported type; omit it during draft creation or before approval.
PO-2055659	You must enter an ordered quantity that's the same as or more than the shipped quantity of {SHIPPED}. The current ordered quantity is {ORDERED}.	**Explanation:** The error is displayed when user attempts to reduce the ordered quantity on a purchase order below the quantity that has already been shipped. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055660	The charge account can't be provided because the PO schedule is associated with a financial orchestration flow.	**Explanation:** The error is displayed in REST when charge account is provided for a new distribution on a PO schedule that is associated with a financial orchestration flow. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055661	The {ATTRIBUTE_NAME} attribute can only be provided for purchase order schedules with an expense destination type.	**Explanation:** The error is displayed in REST when account information such as destination charge account, destination variance account, and accrual account is provided for a new distribution. The new distribution is for an order schedule that has inventory destination type. **Oracle user details:** The account information can't be provided in REST for a new distribution whose order schedule has an inventory destination type. The account information will be derived when the purchase order is submitted. **Resolution note:** The specified schedule attribute is valid only for an expense destination. Remove it from inventory schedules or change destination appropriately.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055663	The change order can't be implemented because additional shipping has occurred after its submission.	**Explanation:** Application cannot implement the change order because additional shipping has happened against the purchase order after the change order was submitted for approval. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055664	You don't have the required permission to validate, update, or submit a draft purchase order.	**Explanation:** This message is displayed when a buyer or a procurement agent tries to validate, update, or submit a draft purchase order using the REST service but doesn't have the appropriate privilege. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055665	You don't have the required permission to initiate or submit changes on an approved purchase order.	**Explanation:** This message is displayed when the user tries to initiate or submit changes on an approved purchase order using the REST service but doesn't have the appropriate privilege. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055666	The unfulfilled demand couldn't be reinstated because the requisitioning business unit doesn't allow reinstating the unfulfilled demand.	**Explanation:** This message is displayed when the user tries to reinstate unfulfilled demand when canceling a purchase order with backing requisition using the REST service and the requisitioning business unit doesn't allow reinstating the unfulfilled demand. **Resolution note:** Review the requisitioning BU setting governing cancellation or reinstatement of unfulfilled demand. Use only the permitted PO cancellation/REST option or request an authorized configuration change.
PO-2055667	The unfulfilled demand couldn't be canceled because the requisitioning business unit doesn't allow canceling the unfulfilled demand.	**Explanation:** This message is displayed when the user tries to cancel unfulfilled demand when canceling a purchase order with backing requisition using the REST service and the requisitioning business unit doesn't allow canceling the unfulfilled demand. **Resolution note:** Review the requisitioning BU setting governing cancellation or reinstatement of unfulfilled demand. Use only the permitted PO cancellation/REST option or request an authorized configuration change.
PO-2055668	You must provide email addresses in a valid format.	**Explanation:** This message is displayed when the user provides email addresses, which are used for supplier communication, in an incorrect format using the REST service or FBDI template. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055669	You must enter an ordered amount that's the same as or more than the shipped amount of {SHIPPED}. The current ordered amount is {ORDERED}.	**Explanation:** This error message is displayed when the user tries to reduce the ordered amount on a purchase order to an amount that is lower than the shipped amount. **Resolution note:** Do not reduce the ordered amount below the amount already shipped. Increase the proposed amount to at least {SHIPPED}, then validate the change order.
PO-2055672	You don't have the required permission to cancel a purchase order, or its lines or schedules. Contact your IT Security Manager.	**Explanation:** This message is displayed when the user tries to cancel a purchase order or its associated lines or schedules using REST Services, but they don't have the required permission. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055673	You don't have the required permission to cancel a change order. Contact your IT Security Manager.	**Explanation:** This message is displayed when the user tries to cancel a change order using REST services, but they don't have the required permission. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055674	Your request for approval couldn't be initiated. Withdraw and resubmit the transaction.	**Explanation:** When a purchase order is submitted for approval the application creates a human task to seek approval. If the approval task creation fails the purchase order gets stuck in the Pending Approval status. This message is displayed when user tries to view the purchase order status but the purchase order is stuck in the Pending Approval status because of the database or SOA server failure. The user has to withdraw and resubmit the transaction once the server is up. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055675	Your request for approval couldn't be processed. Contact your help desk.	**Explanation:** An approved purchase order can be stuck in the Pending Approval, Pending Supplier Acknowledgement, or Sent for Signature because of an unexpected error while processing the request. This message is displayed when user tries to view the purchase order status but the purchase order is stuck in the Pending Approval, Pending Supplier Acknowledgement, or Sent for Signature status because of the database or SOA server failure to process the request. The user receiving the message isn't expected to be someone who can fix the problem, but needs to contact the help desk with some specific information. **Oracle user details:** Share this info with your help desk: {TAC_ERROR_DETAILS}. Review the error details in the Transaction Console work area and recover the transaction. **Oracle administrator action:** Review the error details in the Transaction Console work area. Select the transaction, and then in the Actions menu, click Recover. If the error persists, contact Oracle Support. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055676	You can't update the purchase order schedule because there are transactions pending cost processing for this order. Contact your help desk.	**Explanation:** This error message is displayed during order submission because the user can't update the purchase order schedule as there are transactions pending cost processing for this order. The user receiving the message isn't expected to be someone who can fix the problem but needs to contact the help desk with some specific information. **Oracle user details:** Share this info with your help desk: to process pending cost accounting transactions, in the Scheduled Processes work area, run the Transfer Transactions from Receiving to Costing job and Transfer Costs to Cost Management job. Then, in the Receipt Accounting work area, run the Create Receipt Accounting Distribution job. **Oracle administrator action:** To process pending cost accounting transactions, in the Scheduled Processes work area, run the Transfer Transactions from Receiving to Costing job and Transfer Costs to Cost Management job. Then, in the Receipt Accounting work area, run Create Receipt Accounting Distribution. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055677	You can't update the match option because receipt transactions are costed for this purchase order schedule.	**Explanation:** This error message is displayed during submission check because the user can't update the match option as receipt transactions are costed. **Oracle user details:** To update the purchase order schedule, split it to the extent of undelivered quantity. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055678	You can't update the purchase order because either the purchase order line or schedule is marked for cancellation.	**Explanation:** This message is displayed when the user tries to update a purchase order line or schedule using the REST service but it's marked for cancellation. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055679	A value for the {ATTR_NAME} attribute can't be provided while creating or updating either the purchase order line or schedule.	**Explanation:** This message is displayed when the user provides a value for CancelFlag or CancelReason while creating or updating a purchase order line or schedule using the REST service. **Resolution note:** Remove the attribute from the create/update payload for the PO line or schedule; it is not supported by this operation.
PO-2055680	Your request for approval couldn't be processed. Contact your help desk.	**Explanation:** This message is used when the user tries to view the status of the purchase order they submitted and the purchase order is stuck in the Pending Approval status due to incorrect approval rule setup. The user receiving the message isn't expected to be someone who can fix the problem, but needs to contact the help desk with some specific information. The user has to contact the Procurement application administrator to get the valid approval rules defined for the submitted document. **Oracle user details:** Share this info with your help desk: The approval rule set {RULESET} didn't return any results. Use the Manage Purchasing Document Approvals task in the Setup and Maintenance work area, or use BPM Worklist, to modify the conditions in the rule set so that approvers are found. Then recover the transaction from the Transaction Console. **Oracle administrator action:** Run the Document Approval-Validate diagnostic test to analyze the approval rules configured in the rule set and identify the rule condition that returned false. This diagnostic test is available only if you're using the Manage Purchasing Document Approvals task to manage the approval rules. To access the diagnostic tests, see the Troubleshoot chapter of the Using Common Features guide. If you're using the BPM Worklist application to manage approval rules, you can click the validate button and review the validation log for errors. After you fix the approval rules, go to the Transaction Console work area and recover the transaction. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055681	You don't have the required permission to provide the {ATTR_NAME} attribute.	**Explanation:** This message is displayed when the buyer provides a value for Bill-to BU, Sold-to LE or Negotiated flag in the REST payload while creating a purchase order but doesn't have the required privilege. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055682	Agreement {AGREEMENT_NUM} was rejected because it didn't pass 1 or more validation checks.	**Explanation:** This message is displayed when a purchase agreement is rejected by the application because of 1 or validation errors. **Resolution note:** Open the specific agreement or order validation results. Correct the reported attribute or setup errors, then validate and submit the document again.
PO-2055683	The change order {CO_NUM} has 1 or more validation errors.	**Explanation:** This message is displayed when the change request on a purchase order can't be implemented because of one or more validation errors. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055684	Order {ORDER_NUM} was rejected because it didn't pass 1 or more validation checks.	**Explanation:** This message is displayed when a purchase order is rejected because of validation errors. The application runs validation checks after a purchase order is approved. When validation checks fail, the application rejects the purchase order. **Resolution note:** Open the specific agreement or order validation results. Correct the reported attribute or setup errors, then validate and submit the document again.
PO-2055686	The {ATTRIBUTE_NAME} attribute can't be updated when the change order initiator is a requester.	**Explanation:** This message is displayed when the requester attempts to update an attribute that they can't update. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055687	The destination charge account can only be provided for schedules associated with a financial orchestration flow and expense destination type.	**Explanation:** This message is displayed in REST when the user provides the destination charge account for a PO schedule that isn't associated with a financial orchestration flow and doesn't have expense destination type. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055689	You can't reject this purchase order because it has already been implemented. Cancel the purchase order instead.	**Explanation:** Orders that are Open cannot be rejected through the Acknowledgement web service. Users need to cancel the order instead. **Resolution note:** The purchase order is already implemented. Use a permitted cancellation process rather than rejecting the implemented order.
PO-2055691	Order {ORDER_NUM} couldn't be submitted because it didn't pass 1 or more validation checks.	**Explanation:** This message is displayed when validation checks fail for purchase orders that are automatically created. When validation checks fail, the order comes back to the incomplete status. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055692	Agreement {AGREEMENT_NUM} couldn't be submitted because it didn't pass 1 or more validation checks.	**Explanation:** This message is displayed when validation checks fail for purchase agreements that are automatically created. When validation checks fail, the purchase agreement comes back to the incomplete status. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055693	The purchase order couldn't be canceled because only a buyer can provide a value for the {ATTR_NAME} attribute.	**Explanation:** This message is displayed when an user with initiating party as supplier or requester provides a value for the attributes requiredAcknowledgment, communicationMethod and cancelUnfulfilledDemandFlag when canceling a purchase order using the REST service. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055694	You must provide a base price instead of the {ATTR_NAME} attribute along with a supplier discount.	**Explanation:** This message is displayed in REST when the feature Capture Supplier Discounts on Purchase Order Lines is opted in and user provides Price or Amount in the request payload along with a discount. When a discount is provided in the REST payload, user should provide a base price instead of Price or amount. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055695	A supplier can't add a new schedule using REST services.	**Explanation:** This error is displayed when the supplier tries to add a new schedule in a change order to an existing line in a purchase order. A supplier can add a new schedule (split schedule) for an existing line using the UI but not using REST services. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055696	You can't acknowledge this purchase order because it's canceled, finally closed, or frozen.	**Explanation:** After opt in to Allow Delivery on Purchase Orders that Are Pending Supplier Acknowledgment feature, buyers will not be able to acknowledge orders that are in canceled, finally closed, or frozen status. **Resolution note:** Review the PO status and acknowledgment history; acknowledge only an implemented, active order still awaiting acknowledgment.
PO-2055697	You can't acknowledge this purchase order because it has already been acknowledged.	**Explanation:** After opt in to Allow Delivery on Purchase Orders that Are Pending Supplier Acknowledgment feature, users can't acknowledge an order if acknowledgment has already been recorded for that order. **Resolution note:** Review the PO status and acknowledgment history; acknowledge only an implemented, active order still awaiting acknowledgment.
PO-2055698	You can't acknowledge this purchase order because it hasn't been implemented.	**Explanation:** After opt in to Allow Delivery on Purchase Orders that Are Pending Supplier Acknowledgment feature, users can't acknowledge orders in a number of statuses where the order has not been implemented. **Resolution note:** Review the PO status and acknowledgment history; acknowledge only an implemented, active order still awaiting acknowledgment.
PO-2055699	You can only provide a base price along with a supplier discount.	**Explanation:** This message is displayed in REST when user provides a base price in the request payload but doesn't provide any supplier discount. A base price can only be provided along with a discount. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055700	The {ATTRIBUTE_NAME} attribute on the purchase order and referenced source agreement must be the same.	**Explanation:** This message is displayed when the attribute on a purchase order doesn't match the source agreement referenced on the purchase order through REST services. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055701	You can only update the {ATTR_NAME} attribute for incomplete purchase orders or purchase orders withdrawn or rejected during the approval process.	**Explanation:** This message is displayed in REST when user tries to update the agreement references like Source Agreement, Source Agreement Line number, Source Agreement Procurement BU for a purchase order line that has gone through approval process. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055702	The NegotiatedFlag attribute can't be provided for the purchase order lines that reference a blanket purchase agreement.	**Explanation:** This message is displayed when the user provides negotiated flag on the Purchase order line having a blanket purchase agreement referenced. **Resolution note:** Omit NegotiatedFlag on PO lines sourced from a blanket purchase agreement; pricing/negotiation is governed by the agreement.
PO-2055703	You can provide quantity, price, and UOM only for rate-based schedules.	**Explanation:** This message is displayed when the user provides quantity, price, and UOM for a lump sum schedule when creating a purchase order via REST. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055704	You can provide the {ATTR_NAME} attribute only when using a document style with progress payments enabled.	**Explanation:** This message is displayed when the user provides progress payment attributes like type and description when creating a purchase order via REST using a document style that doesn't support progress payments. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055705	The invoice match option must either be order or receipt for a purchase order schedule.	**Explanation:** This error message is displayed when the buyer tries to provide invoice match option as consumption advice for a non-consignment purchase order schedule while using file-based import for the purchase order creation. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055706	The invoice match option must be consumption advice for a consignment purchase order line.	**Explanation:** This error message is displayed when the buyer tries to provide invoice match option as either order or receipt for a consignment purchase order line while using file-based import for the purchase order creation. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055708	You can only cancel the unfulfilled demand on a progress payment schedule.	**Explanation:** This message is displayed when user tries to reinstate the unfulfilled demand on a progress payment schedule. **Resolution note:** Cancel unfulfilled demand only for a progress-payment schedule; use the appropriate supported flow for other schedules.
PO-2055709	Your application configuration doesn't allow changes to price on schedules that are invoiced or received with accrued liability.	**Explanation:** This message appears when the system is configured to prevent users from updating prices for rate based schedules that have already been received and/or invoiced. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055710	You can't change the {ATTR_NAME} attribute on the progress payment schedule because either a receiving or invoicing transaction exists.	**Explanation:** This message is displayed when the user tries to update the schedule type or description of a progress payment schedule via REST which is already received or invoiced. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055711	The schedule type on the progress payment schedule can't be changed when the schedule has multiple distributions.	**Explanation:** This message is displayed when a supplier tries to update the schedule type of a progress payment schedule with multiple distributions when updating a purchase order via REST. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055712	You don't have permission to update the supplier site on approved purchasing documents.	**Explanation:** The error message is shown in REST response when the user updates the supplier site on an approved purchase order and doesn't have access to Change Supplier Site security privilege. **Resolution note:** Verify supplier qualification, approved supplier list settings and category/item restrictions before creating or sourcing the order.
PO-2055713	The supplier site can't be updated because the purchase order references a blanket purchase agreement.	**Explanation:** The error message is shown in REST response when the user updates the supplier site on an approved purchase order that references a blanket purchase agreement. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055716	You can't cancel the schedule because this is the only active progress payment schedule for the purchase order line. Cancel the line instead.	**Explanation:** This message is displayed when the buyer tries to cancel the last active progress payment schedule of the purchase order line with a backing requisition. User must cancel the line to specify a value for canceling the unfulfilled demand on the purchase order line. **Resolution note:** Review document status and dependent records. Resolve outstanding activity and use only the delete, cancel or close action supported for that status.
PO-2055717	You can provide an amount only for lump sum schedules.	**Explanation:** This message is displayed when the user provides amount attribute for a rate based schedule when creating a purchase order via REST. **Resolution note:** Provide an amount only for lump-sum payment schedules; for other schedule types, use the appropriate quantity or payment structure.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055718	Your request for the electronic signature couldn't be processed because 1 or more attachments have more than 2000 pages.	**Explanation:** This message is displayed when the user tries to sign a purchase order or purchase agreement electronically. The application can't process the purchase order or agreement attachments because 1 or more attachments added for the To-Supplier category or contract documents has more than 2000 pages. **Oracle user details:** You must withdraw the document, reduce the number of pages in the attachment to comply with the Docusign attachment limits, and submit it again. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055719	You can't create or update purchase orders that have progress payments enabled using file-based data import or web services.	**Explanation:** This message is displayed when the user tries to create or update purchase orders that have progress payments enabled using file-based data import or web services. **Resolution note:** Review the affected purchase document and the validation condition stated in the message; correct the related data or setup, validate, and retry.
PO-2055720	The unfulfilled demand couldn't be reinstated because the primary ledger currency of the requisitioning BU and the document currency are different.	**Explanation:** This message is displayed when the Buyer tries to cancel a complex work purchase order which is in a different currency than the primary ledger currency of the requisitioning BU by specifying the value of the cancel unfulfilled demand attribute as no. This is a REST message. **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055721	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't process the requisition line because it's being processed by another user.	**Explanation:** This message is displayed when the user tries to process a requisition line which is already being processed by another other user into a purchase order or a negotiation. **Resolution note:** Another user is editing or processing the requisition line. Wait for that action to finish, refresh the record and check availability before retrying.
PO-2055722	You don't have permission to add lines to a work confirmation.	**Explanation:** This error message is displayed when the user tries to add lines to an existing work confirmation but does not have the appropriate privilege. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055723	A work confirmation can only be created for a single purchase order at a time.	**Explanation:** This error message is displayed when the user tries to create work confirmations on multiple purchase orders using the purchase order schedules REST resource. **Resolution note:** Create one work confirmation for a single purchase order at a time; separate confirmations for different orders.
PO-2055724	You must provide the start date, end date, and request date only for the first PO schedule because there can only be 1 value for these attributes.	**Explanation:** This error message is displayed when the user tries to create multiple work confirmations for a purchase order by providing different values for start date, end date, and request date attributes using the purchase order schedules REST service. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055725	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The item isn't purchasable in the item validation organization of the procurement business unit.	**Explanation:** This error message is displayed if a requisition line includes an item that isn't enabled in the item validation organization of the procurement business unit (from the purchasing options of the procurement BU). **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055726	Requisition {REQ}, Line {REQ_LINE}: The requisitioning business unit you provided must match with the requisitioning business unit on the requisition lines.	**Explanation:** This error message is displayed when the user tries to process requisition lines into a purchase order using REST API and the user provided requisitioning business unit doesn't match with the requisition lines requisitioning business unit. **Resolution note:** Correct the purchase order/requisition BU values so the procurement and requisitioning business units match the source requisition lines.
PO-2055728	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can't process this request because duplicate requisition lines exist.	**Explanation:** This error is displayed to users when they invoking POST operation using requisitionProcessingRequests REST API and there are duplicate requisition lines in the request. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055729	You can't provide a value for the {ATTR_NAME} attribute when a source agreement is provided.	**Explanation:** This error message is displayed when the user tries to provide value for a attribute when there is a source agreement reference. **Resolution note:** Remove the specified attribute from the PO line when a source agreement is provided; derive the value through the agreement.
PO-2055732	You can't group requisition lines when the application is configured to copy descriptive flexfields from requisitions to purchase orders.	**Explanation:** When the application is configured to copy descriptive flexfields from requisition headers or lines to corresponding purchase order headers or lines, you can't group requisition lines. **Resolution note:** Requisition DFF copying requires line-level traceability. Keep affected requisition lines separate instead of grouping them on one PO line.
PO-2055733	You can't group requisition lines from different requisitions because your application is configured to copy descriptive flexfields from requisitions to POs.	**Explanation:** As the application is configured to copy descriptive flexfields from requisitions to purchase orders, the requisition lines added to the document builder must belong to the same requisition when creating a new order. **Resolution note:** Requisition DFF copying requires line-level traceability. Keep affected requisition lines separate instead of grouping them on one PO line.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055735	You can't ship to this location because the secondary UOM in the item definition for this ship-to organization doesn't match the pricing UOM of the line.	**Explanation:** If the line's pricing UOM is the secondary UOM of the item in the default inventory org, then the secondary UOM from the ship to org on each schedule must also be that same UOM. **Oracle user details:** Change the ship-to location so that the secondary UOM of the item matches the pricing UOM of the line. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055736	You can't create purchase order lines with the UOM set to the item's secondary UOM.	**Explanation:** After opt in to the feature, buyers can't create purchase order lines with the ordering UOM set to the secondary UOM. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055737	You can't create consignment purchase order lines that are priced in the secondary UOM.	**Explanation:** Consignment purchase order lines are not allowed to be priced in the secondary UOM. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055738	The ordered quantity can't be less than the total quantity {WC_QTY} requested through work confirmations.	**Explanation:** This message is displayed when the user tries to update the quantity on a rate-based PO schedule to a value less than the sum of the quantity requested for the schedule through work confirmations. This is a REST message. **Resolution note:** Do not reduce PO ordered quantity below the total quantity already requested in work confirmations; reconcile confirmations before any reduction.
PO-2055739	You must enter an ordered amount that's more than the total amount of {WC_AMNT} that was requested through work confirmations.	**Explanation:** This message is displayed when the user tries to update the amount on a lump sum PO schedule to a value less than the sum of the work confirmation amount submitted for the schedule. This is a REST message. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055740	The Order Number attribute can't be updated using web services.	**Explanation:** This error is displayed when the user invokes the purchase order web service to update the order number attribute. **Resolution note:** Review the affected purchase document and the validation condition stated in the message; correct the related data or setup, validate, and retry.
PO-2055741	The purchase order couldn't be created because one or more requisition lines are charged to different procurement cards.	**Explanation:** This message is displayed when the user tries to process requisition lines with different procurement cards into a purchase order. **Oracle user details:** Process the request with bypassWarningsFlag set as true to create the purchase order without procurement card references. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055742	The purchase order couldn't be created because one or more requisition lines are charged to an inactive procurement card.	**Explanation:** This message is displayed when the user tries to process requisitions into a purchase order using REST API and one or more requisition lines are charged to an inactive procurement card. **Oracle user details:** Process the request with bypassWarningsFlag set as true to create the purchase order without procurement card references. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055743	The purchase order couldn't be created because one or more requisition lines have different emergency purchase order references.	**Explanation:** This warning message is displayed when user tries to process requisition lines using REST API and one or more requisition lines have the same emergency purchase order reference. **Oracle user details:** Process the request with bypassWarningsFlag set as true to create the purchase order without emergency purchase order references. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055744	The purchase order couldn't be created because all requisition lines don't refer to the same import source.	**Explanation:** This message is displayed when all requisition lines don't have the same import source. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055745	The purchase order couldn't be created because requisition lines are from different customers.	**Explanation:** This message is displayed when the user tries to process requisitions from different customers into a purchase order using REST API. **Oracle user details:** Process the request with bypassWarningsFlag set as true to create the purchase order. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055746	The purchase order couldn't be created because one or more requisition lines refer to a legal entity different from the sold-to legal entity of the PO.	**Explanation:** This message is displayed if requisition line deliver-to organization's legal entity is different from the sold-to legal entity of the purchase order. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055747	The purchase order couldn't be created because all requisition lines don't refer to the same taxation country and document fiscal classification.	**Explanation:** This message is displayed when the taxation country and document fiscal classification are different on one or more requisition lines. **Resolution note:** Verify tax regime, classification and applicable procurement BU/legal entity; correct the tax attributes, then recalculate tax and validate.
PO-2055748	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The purchase basis {PURCH_BASIS} isn't supported on the document style of the purchase order.	**Explanation:** This message is displayed when requisition line has unsupported purchase basis. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055749	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The line type {LINE_TYPE} isn't supported on the document style of the purchase order.	**Explanation:** This message is displayed when the requisition line type is not supported on the provided document style of the purchase order. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055750	You can't create or change records for items that are dual UOM controlled using the REST service.	**Explanation:** Users can't POST new lines or PATCH changes for lines that are dual UOM controlled when using REST. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055751	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The procurement business unit you provided must match with the procurement business unit on the requisition lines.	**Explanation:** This error message is displayed when the user tries to process requisition lines into a purchase order using REST API and the user provided procurement business unit doesn't match with the requisition lines procurement business unit. **Resolution note:** Correct the purchase order/requisition BU values so the procurement and requisitioning business units match the source requisition lines.
PO-2055753	The supplier site you provided isn't valid because the source agreement doesn't allow ordering from unassigned sites.	**Explanation:** This error is displayed when the user tries to process requisition lines into a purchase order using REST API and provides supplier site and source agreement in the header but the agreement doesn't allow ordering from unassigned sites. **Resolution note:** Verify that the supplier and supplier site are active, valid for the purchasing BU and effective on the transaction date; select the correct record and retry.
PO-2055754	You must only provide a blanket purchase agreement as the source agreement for processing requisition into a purchase order.	**Explanation:** This error message is displayed when the user tries to process requisitions into a purchase order using REST API and has provided a contract purchase agreement reference in the header. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055755	You must provide a value for the currency attribute when the application is configured to create purchase orders in the invoice currency of the supplier site.	**Explanation:** This message is displayed when PO_CURR_DIFF_FROM_SOURCE_BPA is enabled and neither invoice currency nor agreement currency is derived when the user tries to process requisition lines into a new purchase order. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055756	Requisition {REQ}, Line {LINE}: Currency conversion isn't defined between the currency of the requisition line ({RQ_CR}) and the document currency ({DC_CR}).	**Explanation:** This error message is displayed when there is no currency conversion that can be used to convert a requisition line into a purchase order line. **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055757	You can provide a conversion rate only when using user-defined rate types.	**Explanation:** This error message is displayed when the user tries to process requisition lines into a purchase order using REST API and the user provides a specific conversion rate and conversion rate type isn't user-defined. For example, user provided rate type is corporate. **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055758	You can provide a conversion date only when the conversion rate type isn't user-defined.	**Explanation:** This error message is displayed when the user tries to process requisition lines into a purchase order using REST API and the user provides a specific rate date and conversion rate type is user. **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055759	You can't cancel purchase orders for items that are tracked and priced in the secondary UOM when the billed quantity is more than the received quantity.	**Explanation:** This message is displayed to prevent canceling of purchase orders for items that are tracked and priced in the secondary unit of measure when the billed quantity is more than the received quantity. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055760	You can't reduce the ordered quantity of items that are tracked and priced in the secondary UOM when the billed quantity is more than the received quantity.	**Explanation:** This message is displayed to prevent decreasing purchase order quantity of items that are tracked and priced in the secondary unit of measure when the billed quantity is more than the received quantity. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055761	Requisition {REQ}, Line {REQ_LINE}: The procurement business unit on the purchase order and the requisition line don't match.	**Explanation:** This error is displayed when the user adds the requisition line to an existing order using REST API and the procurement business unit on the purchase order and the requisition line don't match. **Resolution note:** Correct the purchase order/requisition BU values so the procurement and requisitioning business units match the source requisition lines.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055762	Requisition {REQ}, Line {REQ_LINE}: The requisitioning business unit on the purchase order and the requisition line don't match.	**Explanation:** This error is displayed when the user adds the requisition line to an existing order using REST API and the requisitioning business unit on the purchase order and the requisition line don't match. **Resolution note:** Correct the purchase order/requisition BU values so the procurement and requisitioning business units match the source requisition lines.
PO-2055763	You can't provide the {ATTRIBUTE_NAME} attribute when adding requisition lines to an existing order.	**Explanation:** This error is displayed when the user adds the requisition lines to an existing order using REST API and provides any of these attributes: Procurement BU, Requisitioning BU, Supplier, Supplier Site, Document Style, Source Agreement, Currency, Conversion Rate Type, Conversion Rate Date, Conversion Rate, Buyer in the request payload. These attributes aren't required when you are adding requisition lines to an existing order. **Resolution note:** Remove disallowed manually provided attributes from the Add Requisition Lines request. Let Oracle derive these values from the requisition.
PO-2055764	You can't provide the {ATTRIBUTE_NAME} attribute when adding requisition lines to a new order.	**Explanation:** This error is displayed when the user tries to process requisition lines into a new purchase order using REST API and provides any of these attributes: OrderNumber or POHeaderId. These attributes are not required when you are adding requisition lines to a new order. **Resolution note:** Remove disallowed manually provided attributes from the Add Requisition Lines request. Let Oracle derive these values from the requisition.
PO-2055765	You can't cancel this record because there is a work confirmation in pending approval or approved status.	**Explanation:** This message is displayed when the user tries to cancel a purchase order, its lines, or schedules with pending work confirmations. **Oracle user details:** Reduce the ordered amount or quantity to match the total work confirmed. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055766	You can't provide these attributes when adding requisition lines to a new order: {ATTRIBUTE_LIST}.	**Explanation:** This error is displayed when the user tries to process requisition lines into a new purchase order using REST API and provides both OrderNumber and POHeaderId in the request payload. These attributes are not required when you are adding requisition lines to a new purchase order. **Resolution note:** Remove disallowed manually provided attributes from the Add Requisition Lines request. Let Oracle derive these values from the requisition.
PO-2055767	You can't provide these attributes when adding requisition lines to an existing order: {ATTRIBUTE_LIST}.	**Explanation:** This error is displayed when user adds the requisition lines to an existing order using REST API and provides attributes like Procurement BU, Requisitioning BU, Supplier, Supplier Site, Document Style, Source Agreement, Currency, Conversion Rate Type, Conversion Rate Date, Conversion Rate, Buyer in the request payload. These attributes are not required when you are adding requisition lines to an existing purchase order. **Resolution note:** Remove disallowed manually provided attributes from the Add Requisition Lines request. Let Oracle derive these values from the requisition.
PO-2055768	You can't match invoices to receipts for items priced in the secondary UOM.	**Explanation:** This message is displayed when creating purchase order lines/schedules with invoice match option set to receipt for items that are tracked and priced in the secondary UOM. Invoice match to receipt is not supported. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055769	The purchase order couldn't be created because the requisition lines are associated with different sales orders.	**Explanation:** This message is displayed when the user tries to process requisition lines associated with different sales orders into a same purchase order using REST API. **Oracle user details:** Process the request with bypassWarningsFlag set as true to create the purchase order with requisition lines associated with different sales orders. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055770	The requisition lines couldn't be added because the purchase order was deleted by another user.	**Explanation:** This message is displayed when the user tries to add requisition lines to a purchase order using REST API and the purchase order was deleted. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055771	The requisition lines couldn't be added to the purchase order because a change order initiated by a supplier or requester already exists for it.	**Explanation:** This message is displayed when a change order initiated by a supplier or requester exists in pending approval and user tries to process requisition lines on to that order. This is a REST message. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055772	You can add requisition lines to buyer-initiated change orders only when it's in Incomplete, Withdrawn, or Rejected status.	**Explanation:** This message is displayed when an existing purchase order has a change order created and the change order status doesn't support processing of new requisition lines onto the purchase order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055774	You can't add requisition lines to the purchase order because it's frozen.	**Explanation:** This message is displayed when the user tries to add requisition lines to a purchase order using REST API and the purchase order is frozen. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055775	You can't update the item because the purchase order line has multiple schedules or distributions.	**Explanation:** This message is displayed when the user tries to update the item on a PO line which has multiple schedules or distributions. This is a REST message. **Resolution note:** The distribution has downstream activity or a controlled status. Keep processed values unchanged and coordinate a supported correction with Finance.
PO-2055776	You can't update the item because either invoiced or received schedules exist for the purchase order line.	**Explanation:** This message is displayed when the user tries to update the item on a PO line that has been invoice or received. This is a REST message. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055777	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The terms and conditions of the source agreement on this requisition line don't apply to the existing order.	**Explanation:** This message is displayed when processing requisition lines sourced from different agreements whose supplier is same as purchase order's supplier and terms and conditions can't be copied over to existing order. This is a REST message. **Oracle user details:** To add requisition lines to the existing order without terms and conditions of the source agreement, process request with bypassWarningsFlag as true. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055778	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The {ATTR} attribute on the PO is different from the source agreement referenced on the requisition line.	**Explanation:** This error is displayed when the source agreement referenced on the requisition line can't be copied to the existing purchase order created as style or currency doesn't match. This is a REST message. **Oracle user details:** To add the requisition line without the source agreement reference on the resulting order line, process the request with bypassWarningsFlag set as true. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055779	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: Currency of the purchase order is different from the source agreement referenced on the requisition line.	**Explanation:** This message is displayed when processing the requisition lines sourced to a CPA whose currency is different from the existing purchase order. This is a REST message. **Oracle user details:** To add the requisition line in purchase order currency, process the request with bypassWarningsFlag set as true. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055780	Requisition {RNUM}, Line {RLINE}: An emergency purchase order is reserved for this requisition line.	**Explanation:** This message is displayed when user the tries to add requisition lines to an existing order using REST API and the requisition line has an emergency purchase order reference. **Oracle user details:** To add requisition lines to the order without the emergency purchase order reference, process the request with bypassWarningsFlag set as true. **Resolution note:** An emergency PO already reserves this requisition line. Use the associated emergency purchasing flow rather than creating another order.
PO-2055781	The request couldn't be processed because requisition lines are from different customers.	**Explanation:** This message is displayed when user the tries to add requisition lines from multiple customers to an existing order using REST API. **Oracle user details:** To add requisition lines to the order from different customers, process the request with bypassWarningsFlag set as true. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055782	The request couldn't be processed because the requisition lines are associated with different sales orders.	**Explanation:** This message notifies the user that requisition lines associated with different sales orders are being added to the same order using REST API. **Oracle user details:** To add requisition lines with different sales order references to the order, process the request with bypassWarningsFlag set as true. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055783	Requisition {NUM}, Line {LNO}: A financial orchestration flow must exist between the requisitioning BU's legal entity and the sold-to legal entity of the order.	**Explanation:** This error is displayed when the user tries to add requisition lines to the order using REST API and the sold-to legal entity of the order is different from one or more requisition lines sold-to legal entity. **Resolution note:** No qualifying financial orchestration flow exists for the relevant legal entities. Review intercompany financial orchestration assignments and legal entity relationships with Finance.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055784	Requisition {REQ_NUM}, Line {REQ_LNUM}: The deliver-to organization's legal entity, {DEL_TO_LE}, differs from the legal entity of the purchase order.	**Explanation:** This message is displayed when the user tries to add requisition lines to an order using REST API and requisition line's deliver-to organization legal entity is different from the sold-to legal entity of the order. **Oracle user details:** To add requisition lines to the existing order with one or more schedules pointing to a legal entity different from the sold-to legal entity of the order, process the request with bypassWarningsFlag set as true. **Resolution note:** Validate the legal entity on the requisition, deliver-to organization and PO. Align the source lines with compatible sold-to/legal entity assignments.
PO-2055785	Requisition {RNUM}, Line {RLINE}: You can't add a requisition line with a procurement card reference to the order without any procurement card reference.	**Explanation:** This message is displayed when the user tries to add requisition lines with procurement card references to an existing order with no procurement card using REST API. After successful processing of requisition line to the order, requisition line procurement card reference will be dropped. **Oracle user details:** To add the requisition line to the order, process the request with bypassWarningsFlag set as true. With this setting, the requisition line won't be charged to any procurement card. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055786	The requisitioning business unit {REQ_BU} specified on the business unit assignment isn't valid.	**Explanation:** This message is displayed when the user submits a agreement that has invalid requisitioning BU specified in the business unit access. **Oracle user details:** Verify that the business unit is active, has the requisitioning business function enabled, and is identified as a client of the procurement business unit. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055787	Requisition {RNUM}, Line {RLINE}: The sold-to legal entity for the requisition line differs from the sold-to legal entity in the order.	**Explanation:** This message is displayed when the user tries to add requisition lines with an reserved purchase order reference to an existing order using REST API and the sold-to legal entity for the requisition line differs from the sold-to legal entity in the order. **Oracle user details:** To add the requisition line to the order, process the request with bypassWarningsFlag set as true. With this setting, the purchase order number reserved for the requisition line won't be used. **Resolution note:** Validate the legal entity on the requisition, deliver-to organization and PO. Align the source lines with compatible sold-to/legal entity assignments.
PO-2055788	You can't update the item on a purchase order line associated with a work order.	**Explanation:** This message is shown when the user tries to update the item on a purchase order line having a work order reference. This is a REST message. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055789	You can't update the item because 1 or more schedules are reserved to fulfill a customer sales order.	**Explanation:** This message is shown when the user tries to update the item on a purchase order line having a sales order reference. This is REST message. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055790	You can't update the item on description-based purchase order lines and service lines.	**Explanation:** This message is displayed when the user tries to update the item on a description-based purchase order line or a service line using the REST API. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055791	You can't update the item or description on a purchase order line for a configuration.	**Explanation:** This message is shown when the user tries to update the item or description on a purchase order line that has a configuration item. This is a REST message. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055792	Requisition {NUM}, Line {LNUM}: The deliver-to organization's legal entity, {DEL_LE}, must be the same as the sold-to legal entity of the purchase order.	**Explanation:** This message is displayed when the user tries to add requisition lines to an existing order using REST API and requisition lines point to a legal entity different from the sold-to legal entity of the purchase order. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055793	You must opt in to the Add New Approved Requisitions to Existing Open Purchase Orders feature to add requisition lines to the order that's in {STATUS} status.	**Explanation:** This message is displayed when the Add New Approved Requisitions to Existing Open Purchase Orders feature is disabled and the user tries to add requisition lines to the order that is not in incomplete or withdrawn or rejected status using REST API. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055794	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The request couldn't be processed because the requisition line requires a negotiation.	**Explanation:** This message is displayed when the user tries to process requisitions line that is eligible for the negotiation process into a new order or tries to add lines to an existing order. **Oracle user details:** To bypass the negotiation process, process the request with bypassWarningsFlag set as true. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055795	You can't add requisition lines to the order because all the lines don't have the same import source.	**Explanation:** This error message is displayed when the user attempts to add requisition lines with an interface source code that is different from what's on the existing order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055796	You can confirm work only when the purchase order has a single work confirmation in any of these statuses: Incomplete, Rejected, and Withdrawn.	**Explanation:** This message is displayed when the user tries to confirm work on a progress payment schedule for the purchase order that doesn't have a draft work confirmation. Work confirmation lines can be added only when there is an incomplete, withdrawn, or rejected work confirmation for the purchase order. **Resolution note:** Review draft work confirmations for the PO. Resolve or withdraw duplicates before confirming or entering progress against a single eligible confirmation.
PO-2055797	You can't enter the PO schedule progress when the purchase order has multiple draft work confirmations.	**Explanation:** This message is displayed when the user tries to enter the PO schedule progress for the purchase order that has multiple Work confirmations that are in incomplete, withdrawn, or rejected status. **Resolution note:** Review draft work confirmations for the PO. Resolve or withdraw duplicates before confirming or entering progress against a single eligible confirmation.
PO-2055798	The pricing UOM must match the item's secondary UOM or the UOM on the order line.	**Explanation:** This message is displayed when an invalid pricing unit of measure attribute is provided when creating a purchase order line for a dual unit of measure item priced in secondary, without a valid source agreement reference. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055799	You can't provide a pricing UOM because the item isn't a dual UOM controlled item.	**Explanation:** This message is displayed when a pricing unit of measure attribute is provided when creating a purchase order line for a non dual unit of measure item, without a valid source agreement reference. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055800	You can't update the price because the PO schedule has a work confirmation in either pending approval or approved status.	**Explanation:** This error message is displayed when the user tries to update the price of a rate-based purchase order schedule that has a work confirmation in pending approval or approved status. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055801	The work confirmation couldn't be processed because the purchase order or schedule is either in closed or on hold status.	**Explanation:** This message is displayed in the error notification when the application automatically rejects a work confirmation because the purchase order or schedule has been either closed or put on hold after the work confirmation was submitted for approval. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055802	You can't submit a PO with a substituted item if there are invoiced or received schedules for the purchase order.	**Explanation:** This message is displayed when the user tries to submit a PO in which you replaced one item with another but there are invoiced or received schedules for the PO. This is a REST message. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055803	The item can't be replaced because the quantity was rounded down to 0.	**Explanation:** This message is displayed when the quantity on the purchase order line becomes 0 during item substitution. This is a REST message. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055805	The pricing UOM on the order line must be the same as the UOM on the source agreement line.	**Explanation:** The pricing UOM must match the UOM on the agreement. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055806	The UOM on the order line must be the primary UOM of the item when the source agreement line is priced in the secondary UOM.	**Explanation:** The order UOM must be the primary UOM of the item if the BPA line is priced in the secondary UOM. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055807	You don't have permission to create an approved work confirmation.	**Explanation:** This message is displayed when the user tries to submit a work confirmation by bypassing approval but the user doesn't have the appropriate privilege to do so. This is a REST message. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055808	You can't replace the item on order lines priced in the secondary UOM.	**Explanation:** The integrator is prevented from replacing the item if the order line is priced in the secondary UOM when calling the REST service. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055809	You can't replace the item on the order line with an item priced in the secondary UOM.	**Explanation:** The integrator is prevented from replacing the item on the order line with an item priced in the secondary UOM. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055810	You can't update project details on schedules with multiple distributions.	**Explanation:** If the schedule has multiple distributions, the user can't update the project details on the schedule using Purchase Request web service. **Resolution note:** The distribution has downstream activity or a controlled status. Keep processed values unchanged and coordinate a supported correction with Finance.
PO-2055811	Your order will cause the total amount released against agreement {AGR_NUM}, line {AGR_LINE_NUM} to exceed its amount limit.	**Explanation:** This message is displayed when the purchase order referencing a source agreement is submitted for approval and the PO line total amount cumulatively released against the agreement line exceeds the BPA Line Agreement Amount. **Resolution note:** The proposed order would exceed the source agreement or line release limit. Reduce the order amount/quantity or amend the agreement limit if authorized.
PO-2055812	Your order will cause the total quantity released against agreement {AGR_NUM}, line {AGR_LINE_NUM} to exceed its quantity limit.	**Explanation:** This message is displayed when the purchase order referencing a source agreement is submitted for approval and the PO line total quantity cumulatively released against the agreement line exceeds the BPA Line Agreement Quantity. **Resolution note:** The proposed order would exceed the source agreement or line release limit. Reduce the order amount/quantity or amend the agreement limit if authorized.
PO-2055813	You can't update the project and task attributes because this purchase order schedule is reserved to supply the demand in the destination organization.	**Explanation:** If a reservation is made for a PO after SCP releases their recommendation, the project attributes on the PO cannot be updated. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2055814	The purchase basis of the line type on the purchase order and referenced source agreement must be the same.	**Explanation:** This message is displayed when the purchase basis of the line type on a purchase order doesn't match with the referenced source agreement line type purchase basis. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055815	You can enable work confirmation on a document style when there are no receipts for the purchase orders of that style.	**Explanation:** This message is displayed when the user tries to enable work confirmation on an existing document style but there are purchase orders of that style with receipts. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055816	You must provide a deliver-to location attribute.	**Explanation:** This is a submit time validation message is displayed to the user when the deliver to location is blank on the purchase order distribution. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055817	The document couldn't be prepared for electronic signature.	**Explanation:** This message is displayed to the buyer when they try to prepare and manage a purchasing document for electronic signature but they haven't granted prior consent to the authentication application to perform signature processing on their behalf. **Oracle user details:** You must grant one-time consent for the authentication application to prepare envelopes on your behalf. After granting your consent, close this message and perform the Prepare for Signature action again. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055818	The document couldn't be processed for electronic signature.	**Explanation:** This message is displayed to the buyer when they try to perform manage signature action on a purchasing document for electronic signature but they haven't granted prior consent to the authentication application to perform signature processing on their behalf. **Oracle user details:** You must grant one-time consent for the authentication application to manage envelopes on your behalf. After granting your consent, close this message and perform the Manage Signature action again. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055819	You can't submit a PO with a substituted item when the order line is associated with a fiscal document or a landed cost.	**Explanation:** This message is displayed when the user tries to submit a PO in which they replaced one item with another but the order line is associated with a fiscal document or a landed cost. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055820	You must be the owner or recipient of the envelope to view the signature history.	**Explanation:** This message is displayed when the user tries to view the signature history by clicking the request signature link on the purchasing document history page. The user must be the owner or recipient of the envelope to view the signature history. But if user is a procurement agent having access to view purchase orders of other agents, he can view the signature history from the purchasing document PDF. **Oracle user details:** Alternatively, you can review the signature history from the purchasing document PDF report. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055821	You can't distribute project costs because there are no eligible distributions.	**Explanation:** This message is displayed when user clicks the Distribute Project Costs button and there are no PO distributions eligible for award allocation. **Oracle user details:** Here are the most likely reasons why none of the distributions are eligible for distributing project costs: the distribution may already have a contract number and funding source, the distribution may not be for a sponsored project, the distribution may not have a project, or the destination type on the distribution's schedule isn't expense based. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055823	The distribution of project costs wasn't completed for 1 or more distributions. View the results for more details.	**Explanation:** This message is displayed to users when distributions couldn't be distributed by distribute project costs process using the associated funding pattern. Using the View Results button, the user can get more details. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055824	You must provide the contract number and funding source for sponsored projects.	**Explanation:** This message is displayed when user invokes Manage Approvals or Submit action on a PO without invoking Distribute Projects Costs and there are eligible PO distributions which can be allocated automatically. **Oracle user details:** There are 1 or more distributions without contract number and funding source information. You can either click Distribute Project Costs to allocate distributions and review the changes or manually enter the contract number and funding source. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2055825	The distribution of project costs wasn't completed for 1 or more distributions.	**Explanation:** This message is displayed to users when distributions couldn't be distributed by distribute project costs process using the associated funding pattern. **Oracle user details:** To review the results, you must call the projectAwardDistributions REST resource by providing AwardDistributionBatchId: {AWD_DIST_BATCH_ID_NUM}. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055826	You must provide the contract number and funding source for sponsored projects.	**Explanation:** This message is displayed when user invokes Manage Approvals or Submit action on a PO without invoking Distribute Projects Costs and there are eligible PO distributions which can be allocated automatically. **Oracle user details:** There are 1 or more distributions without contract number and funding source information. You can either initiate the distributeProjectCosts custom action to allocate distributions and review the changes or manually enter the contract number and funding source. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2055827	The distributeProjectcosts action can be performed only by a buyer or requester.	**Explanation:** This message is displayed when supplier user invokes distributeProjectcosts on a purchase order. This is REST message. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2055828	You can distribute project costs for incomplete purchase orders or purchase orders that are withdrawn or rejected during the approval process.	**Explanation:** This message is displayed to users when they try to invoke distributeProjectCosts custom action on Order in invalid status. Few invalid statuses are: Open, Pending approval, Withdrawn from Pending supplier acknowledgement, signature preparation, canceled, closed, closed for invoicing etc. This is a REST message. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055829	The {CUSTOM_ACTION_NAME} custom action is currently not supported.	**Explanation:** This message is displayed when user invokes distributeProjectcosts which is planned for a future release. **Resolution note:** The requested custom action is unsupported or unavailable in the current status/configuration. Review the implemented extension and available actions.
PO-2055830	You can distribute project costs for incomplete change orders or change orders that are withdrawn or rejected during the approval process.	**Explanation:** This message is displayed to users when they try to invoke distributeProjectCosts custom action on change order which is in invalid status. Few invalid statuses are: Open, Pending approval, Withdrawn from Pending supplier acknowledgement, signature preparation, canceled, closed, closed for invoicing etc. This is a REST message. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055831	You can't distribute project costs on a change order initiated by another party.	**Explanation:** This message is displayed when buyer/requester tries to invoke distributeProjectCosts action on change order which is initiated by another party: requester, buyer, or supplier already exists. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2055832	The distribution of project costs couldn't be completed. Contact your help desk.	**Explanation:** This error message is displayed to the user when there is an unexpected error while invoking the process to distribute project costs. **Oracle administrator action:** Review the application logs for the cause of the error. Contact Oracle Support for assistance if the cause of the error can't be determined. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055833	You must withdraw the purchase order and create a change order to distribute project costs for documents that are in {DOC_STATUS} status.	**Explanation:** This message is displayed to user when he invokes distributeProjectCosts custom action on the purchase order which is in invalid statues like Pending supplier acknowledgement, pending signature preparation status. However user can withdraw the document and create a change order to invoke the action for allocating the costs. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055834	You must create a change order to distribute project costs for documents that are in {DOC_STATUS} status.	**Explanation:** This message is displayed to user when he invokes distributeProjectCosts custom action on the purchase order which is in invalid statues like Open, withdrawn from pending supplier acknowledgement, withdrawn from pending signature preparation, closed for invoicing, closed, closed, closed for receiving status. However user can create a change order to invoke the action for allocating the costs. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2055835	You can't specify yourself or your subordinate as an overriding approver.	**Explanation:** The user specifies himself or any of his subordinates as the overriding approver on a purchase order or change order. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055836	You can't create this credit line because the schedule is associated with a financial orchestration flow.	**Explanation:** Credit lines are only supported if there is no financial orchestration flow associated with the schedule. **Resolution note:** The schedule uses a financial orchestration flow, which prevents creating this credit line. Review the intercompany setup and use a supported adjustment.
PO-2055837	You can't create this credit line because fiscal document processing is enabled for the requisitioning business unit.	**Explanation:** Credit lines are not supported when the requisitioning BU is located in Brazil and fiscal document processing is enabled. **Resolution note:** The requisitioning BU has fiscal document processing enabled. Review the permitted fiscal-document credit flow rather than adding a standard PO credit line.
PO-2055838	You can't create multiple schedules for a purchase order line with a credit line type.	**Explanation:** Purchase order lines with a credit line type can't have multiple schedules. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055839	You can't provide the {ATTRIBUTE_NAME} attribute for a purchase order line with a credit line type.	**Explanation:** Display this error when buyer enters a value for attributes that are not supported for credit line types. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055840	You can't enable credit line types with the provided values.	**Explanation:** In the migrator, if the user enables credit line types, but provides invalid values for other fields (Consignment Terms Enabled, Configuration Ordering Enabled, etc.), then display this error. **Oracle user details:** To enable credit line types, you must enable the purchase basis amount and disable consignment terms, configuration ordering, outside processing, retainage, progress payments, and work confirmation. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055841	You can't submit the document because the overriding approver {OVRDNG_APPRVR} is inactive.	**Explanation:** When the document is submitted, if the overriding approver specified on the purchase order or change order isn't active, an error will be displayed. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055842	You can provide the {ATTR} attribute in the purchase order header when the {PROFILE_OPTION_NAME} profile option is enabled.	**Explanation:** The message appears when the user provides values for the global descriptive flex fields for the purchase order header using draftPurchaseOrders REST API, and the Allow Manual Entry of Award Financial Information for DATA Act profile option isn't selected. **Resolution note:** Enable the named profile option if the header attribute is required and the feature is approved; otherwise omit the attribute.
PO-2055843	The overriding approver isn't valid.	**Explanation:** This error appears during the Import Purchase Orders process if the provided overriding approver isn't valid. **Oracle user details:** Verify that the overriding approver is an active user and matches the name format used in the Oracle Cloud Human Capital Management. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055844	You don't have permission to perform the {CUSTOM_ACTION_NAME} custom action.	**Explanation:** This message is displayed when user attempts to perform a custom action, but doesn't have the necessary security privilege to do so. This is a REST message. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055845	You can't provide the BETC value unless you provide the charge account value.	**Explanation:** This message is displayed in REST when user provides a BETC in the request payload but doesn't provide any PO Charge Account. A BETC can only be provided along with a PO Charge Account. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055847	You can't provide the OverridingApprover attribute when the change order initiator is a supplier.	**Explanation:** This message is displayed when supplier tries to provide an overriding approver on a supplier-initiated change order. Only Requester or buyer can provide an overriding approver on the change orders initiated by them. This is a REST message. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055848	You can't provide an overriding approver when the Enable approver override option isn't enabled for the requisitioning BU.	**Explanation:** This message is displayed when enable approver override isn't enabled for the requisitioning BU of the purchase order and user specifies a value for overriding approver. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055849	You can't create or change purchase order lines with a credit line type.	**Explanation:** Users can't create or update credit lines using the Purchase Order Service. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055850	Enter a value that's between zero and the ordered amount.	**Explanation:** This message is displayed when user provides a discount amount that exceeds the ordered amount of the purchase order. **Resolution note:** Correct the amount to fall between zero and the ordered amount.
PO-2055851	The discount can't be applied to the purchase order because the price is fixed for at least 1 of the purchase order lines.	**Explanation:** This message is displayed when user tries to apply discount on the purchase order but discount is not allowed on one of the purchase order line as the price is read only on the purchase order line. **Oracle user details:** Here are the most likely reasons why the price is fixed for 1 of the purchase order lines: it might have a source agreement that doesn't allow price to be modified, it might be created from a punchout or smart form that doesn't allow price to be modified, it may be already fulfilled and procurement business unit doesn't allow modifying the price, or it may have a configured item. **Resolution note:** A PO line uses fixed pricing. Remove the discount for that line or adjust pricing on the authorized source agreement.
PO-2055852	You can't unfreeze the purchase order because the freeze was initiated from an external application.	**Explanation:** This message is displayed when buyer attempts to unfreeze a PO on which freeze was applied by the Requester. **Resolution note:** The freeze/hold originated in an external application. Release it from the originating system or through the owning integration, not directly in Purchasing.
PO-2055853	You can't remove the hold on the purchase order because the hold was initiated from an external application.	**Explanation:** This message is displayed when buyer attempts to remove hold on a PO on which hold was applied by a Requester. **Resolution note:** The freeze/hold originated in an external application. Release it from the originating system or through the owning integration, not directly in Purchasing.
PO-2055855	The scope must either be Global or Ship-to Organization.	**Explanation:** This message is displayed when the buyer or a REST integration user enters an incorrect value for scope through the REST service. This is a REST message. **Resolution note:** Set the scope to one of the supported values: Global or Ship-to Organization.
PO-2055856	The source document type must either be Blanket Purchase Agreement or Contract Purchase Agreement.	**Explanation:** This message is displayed when the buyer or a REST integration user enters an incorrect value for source document type through the REST service. This is a REST message. **Resolution note:** Specify a supported source type: Blanket Purchase Agreement or Contract Purchase Agreement.
PO-2055857	You can't change the budget date if the schedule has been invoiced or received.	**Explanation:** If the schedule has already been invoiced or received, the buyer is not allowed to change the budget date on the distribution. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055858	The approved supplier list entry doesn't exist.	**Explanation:** This message is displayed when a buyer or an integration user attempts to update through a REST service an approved supplier list entry that doesn't exist. **Resolution note:** Verify that the supplier and supplier site are active, valid for the purchasing BU and effective on the transaction date; select the correct record and retry.
PO-2055861	You don't have permission to override B2B communication of purchase orders.	**Explanation:** This error is displayed when a user tries to upload a value for Override B2B communication, but does not have the associated privilege to perform the function. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055862	The value for the {ATTR_NAME} attribute isn't valid.	**Explanation:** This message is used when attributes related to functional areas are available in FBDI, ADFdi, or REST. If a user puts an attribute value but has not enabled the corresponding functional area, then when the user attempts to import or create data, the user will see this error message. **Oracle user details:** The US Federal Financials functional area must be enabled to use the attribute. Remove the attribute value and try again. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055863	You must enable the Extensible Data Model Used for Electronic Messaging profile option to communicate the change order.	**Explanation:** This message is displayed when the user tries to communicate a change order using a REST API, but the Extensible Data Model Used for Electronic Messaging profile option isn't enabled. **Resolution note:** Enable and validate the Extensible Data Model Used for Electronic Messaging profile option through configuration before communicating this change order by REST.
PO-2055864	The ordered quantity of {ORDERED} must be the same as or more than the sum of the received quantity ({RECEIVED}) and the in-transit quantity ({TRANSIT}).	**Explanation:** The error is displayed when user attempts to reduce the ordered quantity on a purchase order below the quantity that has already been shipped and received. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055865	The change order can't be implemented because additional receiving or shipping has happened since its submission.	**Explanation:** The error is displayed if any shipping or receiving transaction happened after change order submission that would result in the ordered quantity to be less the quantity that has already been shipped and received. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055866	You can't update the deliver-to location if a purchase order distribution has a one-time location.	**Explanation:** This message is used when the buyer or requester changes the deliver-to location attribute on a purchase order distribution with a one-time location. **Resolution note:** The distribution has downstream activity or a controlled status. Keep processed values unchanged and coordinate a supported correction with Finance.
PO-2055867	You must be a preparer of one of the backing requisitions of this purchase order to create a change order.	**Explanation:** This message is displayed when the user tries to create a change order on the purchase order using the REST service, and he or she isn't the preparer of any of the backing requisition lines of the purchase order. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055868	You don't have permission to cancel either the purchase order, or its lines or schedules.	**Explanation:** This message is displayed when the user tries to cancel either the purchase order or its lines or schedules using the REST service, and he or she doesn't have the required permission to do so. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055869	You don't have permission to update purchase orders that combine multiple requisitions.	**Explanation:** This message is displayed when the user tries to update a purchase order using the REST service and the purchase order consolidates multiple requisitions, and he or she doesn't have the privilege to do so. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055870	You can't use the UpdateAllLines custom action to update these attributes: {ATTR_LIST}.	**Explanation:** REST Users can only mass update deliver-to location ID, RequesterId, code combination ID, and charge account. This message is displayed to the user when they call the update all lines custom action on any of the attributes that aren't supported for the mass update. **Resolution note:** Review the affected purchase document and the validation condition stated in the message; correct the related data or setup, validate, and retry.
PO-2055871	You must update the Base Price or Discount attribute value to generate the price.	**Explanation:** This message is displayed to the user when supplier discount couldn't be calculated correctly for purchase order. Possible reasons could be that the user has configured the discount fields or price and entered incorrect values. **Resolution note:** Review the affected purchase document and the validation condition stated in the message; correct the related data or setup, validate, and retry.
PO-2055872	You can use the updateAllLines custom action only for those requester change orders that are in Incomplete, Rejected, or withdrawn status.	**Explanation:** The updateAllLines custom action is used to mass update attributes on an incomplete/Rejected/Withdrawn requester change order. This can't be used for Buyer or supplier change orders and change orders that aren't in Incomplete status. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055873	You must be a requester or buyer to perform the {NAME_CUSTOM} custom action.	**Explanation:** This message is displayed when the buyer or supplier user calls the custom action on a change order. This is REST message. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055874	You can use the calculateTaxAndAccounting custom action only for change orders that are in Incomplete, Rejected, or Withdrawn status.	**Explanation:** The calculateTaxAndAccounting custom action is used to recalculate and rederive accounts for change orders if any schedule or distribution level attributes are modified. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055875	You can only use the deleteChangeOrder custom action for requester change orders that are in Incomplete status.	**Explanation:** The deleteChangeOrder custom action is used to delete an incomplete requester change order. This can't be used for Buyer or supplier change orders and change orders that aren't in Incomplete status. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055876	You can provide a value for either the DeliverToCustomerLocationId attribute or for the DeliverToLocationId attribute, but not for both.	**Explanation:** This message is displayed to the REST user when the user tries to update the location at the purchase order distribution and provide values for both DeliverToCustomerLocationId and DeliverToLocationId when the value is required only for one of the attributes. **Resolution note:** Provide either DeliverToCustomerLocationId or DeliverToLocationId in the request, not both.
PO-2055877	You must be a preparer of one of the backing requisitions of the purchase order to delete or update a change order.	**Explanation:** This message is displayed when the user tries to delete or update a change order on the purchase order using the REST service, and they are not the preparer of any of the backing requisition lines of the purchase order. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055878	You can't initiate the {NAME_CUSTOM} custom action because it's currently not available.	**Explanation:** This error will be displayed when user is trying to access custom actions and change order UI features for PWA application if profile option PO_ENABLE_RCO_PWA is set as No. These features are still under development and cannot be released to customers. **Resolution note:** The requested custom action is unsupported or unavailable in the current status/configuration. Review the implemented extension and available actions.
PO-2055879	You can't initiate the {NAME_ACTION} action because it's currently not available.	**Explanation:** This error will be displayed when user is trying to access change order UI features for PWA application if profile option PO_ENABLE_RCO_PWA is set as No. These features are still under development and cannot be released to customers. **Resolution note:** The requested custom action is unsupported or unavailable in the current status/configuration. Review the implemented extension and available actions.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055880	You can use the deleteChangeOrder custom action only for purchase orders with an incomplete change order.	**Explanation:** The deleteChangeOrder custom action is used to delete an incomplete change order. This can't be used for purchase orders which have no change orders. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055881	You can't update the one-time location if a purchase order distribution has an internal location.	**Explanation:** This message is used when the buyer or requester changes the one-time location attribute on a purchase order distribution which has one-time location. **Resolution note:** The distribution has downstream activity or a controlled status. Keep processed values unchanged and coordinate a supported correction with Finance.
PO-2055882	You can't provide a value for checklist attributes using the procurementAgents REST API.	**Explanation:** The error message is displayed when the user provides a value for checklist attributes using the procurementAgents REST API. **Resolution note:** Do not send compliance checklist fields through the procurementAgents REST resource. Use the purchasing document/checklist resource that supports them.
PO-2055883	You can't submit the document with a canceled checklist.	**Explanation:** This error message is displayed when the buyer tries to submit a purchasing document that has a compliance checklist in canceled status. **Resolution note:** Remove or replace the canceled checklist; attach an active eligible compliance checklist before submission.
PO-2055884	You must enter a priority that's between 1 and 999.	**Explanation:** This message is displayed when the user enters a value out of the range of 1 and 999. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055885	You must use a checklist that isn't associated with any other purchasing document.	**Explanation:** This error message is displayed when the buyer tries to submit a purchasing document that has a compliance checklist which is associated with other purchase order or purchase agreement. **Resolution note:** Attach a compliance checklist not already assigned to another purchasing document; create a separate checklist where required.
PO-2055886	The received quantity of {RECEIVED} must be the same as or more than the invoiced quantity of {BILLED}.	**Explanation:** This error message is used when the user tries to update drop ship purchase order which has received quantity less than invoiced quantity. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055887	You can't edit the purchase order because order management is currently processing the change order. Try again later.	**Explanation:** This message is used when the user tries to edit the purchase order which has requester-initiated change order initiated from Order Management. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055888	You can't revise the schedule because it has in transit shipments.	**Explanation:** This error is displayed when the user tries to modify a drop ship purchase order where quantity shipped is greater than zero because it was returned to vendor. **Resolution note:** Complete or resolve in-transit shipments before revising the affected schedule.
PO-2055891	The checklist details you've entered aren't valid.	**Explanation:** This error message is displayed when the user enters a checklist number or checklist title that isn't valid during the purchasing document import process using FBDI. These are the possible reasons for this error: the checklist status isn't valid, the combination of the checklist number and checklist title doesn't exist for this procurement BU, a unique value for checklist title couldn't be determined, or the checklist is already referenced on a different purchasing document. **Oracle user details:** These are the possible reasons: the checklist status isn't valid, the combination of the checklist number and checklist title doesn't exist for this procurement BU, a unique value for checklist title couldn't be determined, or the checklist is already referenced on a different purchasing document. **Resolution note:** Validate the checklist number/title and its BU applicability; select the valid checklist record before importing or updating.
PO-2055892	You must add a compliance checklist that's not associated with any other purchasing document.	**Explanation:** This error message is displayed when the buyer tries to submit a purchasing document that has a compliance checklist that is already associated with a different purchasing document. **Resolution note:** Attach a compliance checklist not already assigned to another purchasing document; create a separate checklist where required.
PO-2055893	You can provide up to 1500 characters for the Additional Contact Email attribute.	**Explanation:** This message is displayed when the user provides email addresses with more than 1500 characters for additional contact email attribute while using the REST service or FBDI template. **Resolution note:** Shorten Additional Contact Email text to 1,500 characters or fewer.
PO-2055894	You can't duplicate special handling orders.	**Explanation:** The user isn't allowed to duplicate purchase orders that require special handling. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055895	You must use the Expense destination type for a special handling order that's set to automatically create receipts.	**Explanation:** If the special handling type of the purchase order has Create Receipts Automatically enabled, distributions must have an expense destination type. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055896	You can't order items that are lot or serial controlled on a special handling order that's set to automatically create receipts.	**Explanation:** If the special handling type of the special handling purchase order Automatically Create Receipts enabled, the item on the line can't be lot or serial controlled. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055897	You can't group special handling requisition lines with lines from different requisitions.	**Explanation:** Special handling requisition lines can't be grouped with other requisition lines when creating order from requisition lines on the Process Requisitions page. **Resolution note:** Special-handling lines cannot be grouped across different requisitions. Create separate order lines/documents per requisition.
PO-2055898	You can't add requisition lines to an existing special handling order.	**Explanation:** Buyers can't add requisition lines to an existing special handling order. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055899	You can only create orders from special handling requisition lines.	**Explanation:** When processing special handling requisition lines, the only accepted outcome is a new order. You can't add to an existing order or negotiation. **Resolution note:** Use only eligible special-handling requisition lines for a special-handling order; separate standard requisitions.
PO-2055900	You can't create special handling orders for requisitioning business units with fiscal document processing enabled.	**Explanation:** The application doesn't support special handling orders for Brazil localized business units. **Resolution note:** Special handling orders are unavailable for BUs using fiscal document processing. Route the demand through a supported purchasing flow.
PO-2055901	You must set receipt routing to direct delivery if automatic receipt creation is enabled for the special handling type.	**Explanation:** The receipt routing field on the schedule must be set to direct delivery if the special handling type has automatic receipt creation enabled. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055902	The Item Import process couldn't be completed.	**Explanation:** In the event that the Item Import ESS job is canceled while executing purchasing document import process or encounters an error without providing details in egp_import_errors, error message is displayed in Purchasing Document Import Errors Report. **Oracle user details:** Run the File-Based Data Import process and then the Import Blanket Agreements scheduled process again. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055903	The {PO_INTERFACE} attribute exceeds the maximum length of characters.	**Explanation:** The error message is displayed under this condition: when the length of attributes in the EGP interface table is less than that in the PO interface table for manufacturer, supplier, manufacturer part number, and supplier item. If a user enters values for these attributes in the BPA FBDI spreadsheet that exceed the supported value in the EGP interface when creating items, an error is returned. **Oracle user details:** The {PO_INTERFACE} attribute exceeds the maximum length of {LENGTH} characters for the {EGP_INTERFACE} attribute when creating items during the purchasing document import. **Resolution note:** Reduce the attribute value to the documented maximum length for that import/API attribute.
PO-2055904	You can't create special handling orders with a document style enabled for configuration ordering, consignment terms, outside processing, or complex work.	**Explanation:** Buyers can't create special handling orders if the document style has certain settings enabled. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055905	You must enter a special handling type that's enabled.	**Explanation:** The special handling type provided in the FBDI template does not exist or is disabled. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055907	You can't perform the {OPERATION} operation on the item because it's associated with at least 1 {BUSINESS_OBJECT} object.	**Explanation:** Message is returned by Purchasing when Product Information Management invokes the checkItemReference API to check if any procurement transactions exist for an item, and Purchasing finds at least one. If so, neither item's primary UOM can be updated nor can the item be deleted. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055908	You must provide a special handling descriptive flexfield context that matches the context associated with the special handling type.	**Explanation:** When creating special handling orders using the REST resource, the integrator must provide a special handling flexfield context that is the same as the one associated with the special handling type as defined in the Manage Special Handling Types task. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055909	You can't provide a value for the special handling descriptive flexfield context because the order doesn't have a special handling type.	**Explanation:** When creating special handling orders using REST, the integrator can't provide a special handling flexfield context if the order is not a special handling order. **Resolution note:** Provide the special handling DFF context only when the order has a valid special handling type; otherwise remove it.
PO-2055910	You can't update the ship-to location if a purchase order distribution has a one-time location.	**Explanation:** This message is displayed when the user tries to update the ship-to location on a purchase order schedule and the purchase order is delivered to a one-time location. **Resolution note:** The distribution has downstream activity or a controlled status. Keep processed values unchanged and coordinate a supported correction with Finance.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055911	You can't update the ship-to location because the purchase order is scheduled to be shipped to a third party.	**Explanation:** This message is displayed in REST when user tries to update the ship-to location on the PO schedule and the destination type on the schedule is drop ship. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2055912	You can update the ship-to location when the purchase order has only 1 distribution.	**Explanation:** This message is displayed in REST when user tries to update the ship-to location on the schedule and there are multiple distributions for that schedule. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2055914	The item creation process couldn't be completed. For details, review the log file for request ID {REQUEST_ID}.	**Explanation:** This message is displayed on the Purchasing Document Import Errors report when item creation can't be completed. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055915	The UOM isn't valid.	**Explanation:** This error occurs during the creation or update of a purchase document line or ASL when the Product Management's opt in feature Calculate Runtime Transaction UOM Conversions with Generated Item Data is enabled, provided that the item has a packaging string definition, and the purchasing UOM is either not present in the item's packaging string definition or is listed but currently inactive. **Oracle user details:** Verify that the UOM is active and included in the item's packaging string definition. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055916	You must enter an agreement line start date that's on or before the expiration date.	**Explanation:** Agreement line start date must be before the expiration date. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055917	The agreement line start date must be within the agreement start and end dates: {AGREEMENT_START_DATE} and {AGREEMENT_END_DATE}.	**Explanation:** The agreement line start date of an agreement line must be within the start and end dates of the agreement. **Resolution note:** Review the relevant header, line and agreement effective dates; adjust the conflicting dates to a valid sequence and validate again.
PO-2055918	You must enter a start date for the price break that's on or after the agreement line start date {LINE_START_DATE}.	**Explanation:** A price break is associated with an agreement line. Start date of a price break must not be before the agreement line start date. **Resolution note:** Review agreement, line and price break effective dates. Align the price break to the permitted period and validate the agreement.
PO-2055919	You must enter an end date for the price break that's on or after the agreement line start date {LINE_START_DATE}.	**Explanation:** A price break is associated with an agreement line. End date of a price break must not be before the agreement line start date. **Oracle user details:** The current price break end date is {PRICE_BREAK_END_DATE}. **Resolution note:** Review agreement, line and price break effective dates. Align the price break to the permitted period and validate the agreement.
PO-2055920	You must enter an agreement line start date that's before the start date of all price breaks.	**Explanation:** Agreement Line Start Date should always be before start date of price breaks of agreement. **Resolution note:** Review agreement, line and price break effective dates. Align the price break to the permitted period and validate the agreement.
PO-2055921	You must specify the poHeaderId attribute to retrieve purchase order lifecycle details.	**Explanation:** This messages is displayed to REST users when they try to do a blind query on the Purchase Order Life Cycle Details REST resource. This resource doesn't support data retrieval without the client providing a valid PO header id. **Resolution note:** Specify a valid poHeaderId in the REST/API request to retrieve lifecycle or document history.
PO-2055922	The requisition line wasn't processed into a purchase order because the source agreement line is no longer effective.	**Explanation:** This message is displayed when the application cannot automatically convert a requisition line into a purchase order because the current date is before the agreement line start date specified on the referenced agreement line. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055923	You must specify the poHeaderId attribute to retrieve the purchase order document history details.	**Explanation:** This message is displayed when buyer invokes the document history rest resource without providing a value for the poHeaderId attribute. **Resolution note:** Specify a valid poHeaderId in the REST/API request to retrieve lifecycle or document history.
PO-2055924	The {ATR} attribute couldn't be updated because the business unit assignment is disabled.	**Explanation:** This error message is generated when a user amends a purchase agreement through the open interface and tries to update attributes of a BU assignment that's already disabled. The user has to enable the business unit assignment to update these attributes. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055925	The source agreement line isn't valid.	**Explanation:** This error occurs during the submission process when the requested delivery date of a purchase order line falls outside the effective dates of the corresponding source agreement line. **Oracle user details:** Verify that the requested delivery date of the line falls within the effective dates of the source agreement line. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055926	You can't provide the {ATTR_NAME} attribute because the purchase order has as a procurement card reference.	**Explanation:** This message is displayed when the user provides attributes like the Invoice Match Option, Match Approval Level, Invoice Close Tolerance Percent, and Destination Type when creating or updating a purchase order with procurement card reference via REST. **Resolution note:** Remove the specified attribute where the PO references a procurement card; use only procurement-card-compatible fields.
PO-2055927	You can't provide the {ATTR_NAME} attribute because the document style doesn't support the purchase bases quantity.	**Explanation:** This message is displayed when the user provide attributes like the freight terms, FOB, and shipping method when creating or updating a purchase order via REST using a document style that doesn't support the purchase bases quantity. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055928	The {ATTRIBUTE_NAME} attribute can't be updated because the PO schedule has a work confirmation in pending approval status.	**Explanation:** This error message is displayed when the user tries to update the receiving tolerance attributes on a purchase order schedule that has a work confirmation in pending approval status. Here are the applicable values for receiving tolerance attributes - over-receipt tolerance, over receipt action, late receipt tolerance, early receipt tolerance, and receipt date exception. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055929	The {ATTRIBUTE_NAME} attribute can't be updated on a drop ship purchase order schedule.	**Explanation:** This error message is displayed when the user tries to update the receiving controls on a drop ship purchase order schedule. Here are the applicable values for receiving controls - over-receipt tolerance percent, Overreceipt Action, and Receipt Routing. **Resolution note:** Review the affected purchase document and the validation condition stated in the message; correct the related data or setup, validate, and retry.
PO-2055930	The Currency attribute can't be updated for the purchase order lines that reference a blanket purchase agreement.	**Explanation:** This message is displayed when the user updates currency on a Purchase order line having a blanket purchase agreement referenced. **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055931	You must specify a finder to retrieve data.	**Explanation:** This message is displayed when the user tries to retrieve data using a REST API and the REST resource doesn't support data retrieval without a finder. **Resolution note:** Supply a valid REST finder parameter to identify the requested records.
PO-2055932	The accrue at receipt couldn't be updated because the PO schedule is associated with a financial orchestration flow.	**Explanation:** The error is displayed in REST when the user tries to update accrue at receipt on a PO schedule that's associated with a financial orchestration flow. **Resolution note:** Check receipts, invoices and the schedule lifecycle status. Resolve pending downstream transactions before making only those changes permitted by Oracle.
PO-2055933	You can't update the UOM because the line references a blanket purchase agreement, a smart form, or a punchout item.	**Explanation:** This message is displayed when a buyer tries to update the UOM on a purchase order line and the PO line references a blanket purchase agreement, smart form or a punchout item. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055934	You can't update the category because there are multiple distributions.	**Explanation:** This error is displayed when a buyer tries to update the category on the purchase order line and the PO line has more than one distributions. **Resolution note:** The distribution has downstream activity or a controlled status. Keep processed values unchanged and coordinate a supported correction with Finance.
PO-2055935	The match approval level must be 3-way matching for a consignment purchase order line.	**Explanation:** This error message is displayed when the user provides match approval level as either 2 way or 4 way for a consignment purchase order line while using draft purchase orders REST API. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055936	You can't update the category because the line references a punchout item.	**Explanation:** This message is displayed when a buyer tries to update the category on a purchase order line that references a punchout item. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055937	You don't have permission to delete a purchase order.	**Explanation:** This error message is displayed when the user tries to delete a purchase order but doesn't have the appropriate privilege. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055938	You can't duplicate the document because one or more schedules are associated with a Kanban card.	**Explanation:** Purchase orders that are created from a Kanban manufacturing process can't be duplicated. **Resolution note:** Search for the existing record in the relevant BU and remove the duplicate entry or supply a unique value.
PO-2055939	You don't have the required permission to create a purchase order or its lines.	**Explanation:** This message is displayed when a buyer or a procurement agent tries to create a draft purchase order or lines using the REST service but doesn't have the appropriate privilege. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055940	You can use the updateAllLines custom action only for those buyer change orders that are in Incomplete, Rejected, or Withdrawn status.	**Explanation:** The updateAllLines custom action is used to mass update attributes on an incomplete/Rejected/Withdrawn buyer change order. This can't be used for change orders that aren't in draft status. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055941	You must provide a conversion date because the conversion rate type isn't User.	**Explanation:** This error is displayed when user didn't provide a value for conversion date and currency conversion rate type isn't user. **Resolution note:** Verify document and ledger currencies, conversion rate type/date and available daily rates; correct the missing or invalid rate and retry.
PO-2055942	You can use the Reopen Finally Closed action only on documents, lines, or schedules that are finally closed.	**Explanation:** Shown when the user is trying to reopen a finally closed document but the document status is NOT finally closed. **Resolution note:** Use Reopen Finally Closed only on a finally closed document, line or schedule; verify status first.
PO-2055943	Source agreement isn't valid.	**Explanation:** This error occurs during the submission process when the system date falls outside the effective dates of the corresponding source agreement line. **Oracle user details:** Verify that the source agreement line is currently effective. **Resolution note:** Check the invalid value, effective dates and its master-data setup; replace it with an eligible value and validate again.
PO-2055944	You can only process special handling requisition lines into orders.	**Explanation:** When adding special handling lines to the document builder, the only outcomes are a new order or an existing order. You can't create new negotiations or add to existing negotiations from those lines. **Resolution note:** Use only eligible special-handling requisition lines for a special-handling order; separate standard requisitions.
PO-2055945	You can only add special handling requisition lines from different requisitions to an existing order.	**Explanation:** If the buyer selects special handling requisition lines from different requisitions in the document builder, they can only add those to an existing order, and they can't create a new order from those lines. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055946	You can only add requisition lines to purchase orders with the same special handling type.	**Explanation:** When adding special handling requisition lines to existing orders in the document builder, the order must be the same special handling type as the requisition. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055947	You can only group special handling requisition lines with lines from requisitions with the same special handling type.	**Explanation:** You can only add special handling requisition lines to the document builder if they all have the same type. **Resolution note:** Group special-handling requisition lines only when all lines have the same special handling type.
PO-2055948	{PREFIX}: You must enter a value for the {ATTRIBUTE_NAME} attribute.	**Explanation:** The user will see this error when they try to save the purchase or change order without providing a value for mandatory attributes. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055949	You can't freeze the purchase order because it's already in Frozen status.	**Explanation:** This error message is displayed when a user attempts to perform the freeze action on a purchase order that's already in a frozen state. **Resolution note:** Confirm the current hold, freeze or firm status before changing it; the requested transition is redundant or not applicable to the record.
PO-2055950	You can't unfreeze the purchase order because it's not in Frozen status.	**Explanation:** This error message is displayed when a user attempts to perform the unfreeze action on a purchase order that isn't currently in a frozen state. **Resolution note:** Confirm the current hold, freeze or firm status before changing it; the requested transition is redundant or not applicable to the record.
PO-2055951	You can't perform the checkFunds action because the purchase order isn't subject to budgetary control.	**Explanation:** Message raised in REST checkFunds custom action when users try to check funds of a purchase order that isn't subject to budgetary control. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055952	You can't perform the checkFunds action for purchase orders without any distributions.	**Explanation:** This primarily is a submission-time validation indicating that the purchase order submitted using the REST service isn't valid. The same validation is also performed while calling the REST custom action check funds manually. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055953	You can perform the ViewPDF custom action only on purchase orders that aren't implemented and on change orders.	**Explanation:** This messages is displayed in REST when buyer tries to call the ViewPDF REST custom action on open purchase orders that don't have a change order pending. The custom action can be called only change orders and on purchase orders that are in the incomplete, withdrawn, rejected, pending approval, pending supplier acknowledgement, pending signature preparation and sent for signature statues. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055954	The order didn't pass the funds check. Contact the budget manager to correct the budget or give you the option to request an insufficient funds override.	**Explanation:** The error is raised in REST when users try to use the custom action submit and the purchase order doesn't pass funds check there isn't an override option. A budget manager must add money to the budget to remove the error, or enable the override option by setting up an override approver and assigning a privilege to the Buyer. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055955	The document didn't pass the funds check, but an override is available. You can submit the document for an insufficient funds override approval.	**Explanation:** The message is raised in REST checkFunds (manual and implicit) when funds check doesn't pass due to insufficient funds, but there is an option to request insufficient funds override. The user must set the requestFundsOverrideFlag parameter to true when submitting the purchase order with the submit custom action. **Resolution note:** Review document status and approval history. Verify the configured approval rules and assigned approvers; correct the failing setup and resubmit.
PO-2055956	You must provide a justification to request a funds override.	**Explanation:** The error is raised when the user attempts to request funds override and doesn't provide a justification. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055957	You can request funds override only for change orders initiated by a buyer or requester.	**Explanation:** This message is displayed when the integration user tries to submit supplier initiated change order with funds override flag as true. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055958	You must opt in to the Allow Delivery on Purchase Orders that Are Pending Supplier Acknowledgment feature to call the Acknowledge action.	**Explanation:** This message is displayed when the Allow Delivery on Purchase Orders that Are Pending Supplier Acknowledgment feature is disabled and the user tries to acknowledge an order using REST API. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055959	You can update the taxation country only on purchase orders with no schedules.	**Explanation:** This message comes when user tries to patch taxation country in purchase order which has schedules. **Resolution note:** Verify tax regime, classification and applicable procurement BU/legal entity; correct the tax attributes, then recalculate tax and validate.
PO-2055960	The document is currently being published by another process.	**Explanation:** This error message is displayed when user attempts to publish a staged document that's currently being published by another process. **Resolution note:** A publishing process is already running. Check its status, wait for it to finish, then refresh the document.
PO-2055961	You can't withdraw purchase orders as a supplier. Only requesters or buyers can withdraw purchase orders.	**Explanation:** If the supplier user invokes WITHDRAW custom action for purchase order, then this error message will be used. It will be needed for REST error since supplier won't trigger withdraw PO flow from UI. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2055962	You can't submit the change order. Contact your buyer to submit your changes.	**Explanation:** This message will appear when a supplier user attempts to submit a change order, but the changes couldn't be validated due to budgetary control errors. Customers don't want external users like suppliers to know about budgetary control validation errors which is why the details of the error isn't provided in the message. The supplier user has to contact the buyer to confirm the cause of the error and to process the changes. Buyer can request for additional funds and process the changes. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2055963	You don't have the required privilege to distribute project costs on a purchase order.	**Explanation:** This message is raised in REST when users try to run custom actions distributeProjectCosts and don't have Distribute Award Project Costs and Quantities privilege for it. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2055964	You must enter an acknowledgment response at the purchase order header.	**Explanation:** When patching the child schedule on the PO acknowledgments resource, the application prevents the user from entering a response at the schedule if they aren't also providing a response at the header. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055965	You don't have permission to create or update purchase orders with a backing requisition. Contact your IT security manager.	**Explanation:** This message is displayed when the user tries to create or update purchase orders with backing requisition while publishing a staged document, and they don't have the privilege to do so. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2055966	You must select 1 order at a time when orders are pending supplier acknowledgment.	**Explanation:** Orders in Pending Supplier Acknowledgement status aren't available for mass action and should be acknowledged one at a time. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055967	The staged document couldn't be created because requisition lines belong to different requisitioning business units.	**Explanation:** This message is displayed when requisition lines selected by user for staging through select all on the UI belong to different requisitioning business units. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2055968	The staged document couldn't be created because requisition lines are from different import sources.	**Explanation:** This message is displayed when requisition lines selected by user for staging through select all on the UI belong to different import sources. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055969	There aren't any unstaged requisition lines to stage.	**Explanation:** This message is displayed when all requisition lines selected by user for staging through select all on the UI are already staged. **Resolution note:** No unstaged requisition lines remain. Review staged lines or select new eligible requisition lines before staging.
PO-2055970	The document didn't pass the funds check process.	**Explanation:** This message is raised in REST check Funds action when a funds check is performed on a purchase order and it doesn't pass the budgetary control validation. There is a view details link for the user to view the funds check results including the errors. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055971	The document passed the funds check process with warnings.	**Explanation:** This message is raised in REST check funds action when a funds check is performed on a purchase order and the budgetary control validation returns warnings. There is a view details link for the user to view the funds check results including the errors and warnings. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055973	The value of the {ATTRIBUTE_NAME} attribute exceeds the maximum length allowed.	**Explanation:** This message is displayed when the user provides a value for any attribute that exceeds the maximum length allowed for that attribute. **Resolution note:** Reduce the attribute value to the documented maximum length for that import/API attribute.
PO-2055974	The requisition lines that have different import source can't be added to the staged document.	**Explanation:** This message is displayed when all requisition lines selected by user for add to stage process through select all on the UI and they don't have same import source. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055975	The requisition lines that have different requisitioning business units can't be added to the staged document.	**Explanation:** This message is displayed when all requisition lines selected by user for add to stage process through select all on the UI and they don't have same requisitioning business unit. **Resolution note:** Split the staged document by requisitioning BU; only requisition lines from the same BU can be added together.
PO-2055976	The {ATTR} attribute on the requisition lines and the staged document must be the same.	**Explanation:** This message is displayed when buyer tries to add requisition lines to a staged document with different requisitioning business unit or import source. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2055977	The funds check can't be processed because some of the distributions have a sponsored project.	**Explanation:** This message is raised when there exists a sponsored project on any distributions and the buyer without invoking distribute project costs action, tries to perform Check funds. **Oracle user details:** Select the contract number and funding source for the distributions that have a sponsored project or distribute the project costs. **Resolution note:** Validate control budget, charge account and amount, then rerun the funds check or obtain the necessary funds/override authorization.
PO-2055978	Requisition lines with different special handling types can't be added to the staged document.	**Explanation:** This message is displayed when all requisition lines selected by user for add to stage process through select all on the UI and they don't have same special handling type. **Resolution note:** Separate staged document lines by special handling type.
PO-2055979	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can place a requisition line that has an emergency PO number only on a purchase order.	**Explanation:** Requisition lines that reference an emergency PO number can only be placed on a purchase order and not on a negotiation. **Resolution note:** A requisition line with an emergency PO reference must be placed on a purchase order, not an agreement or other document.
PO-2055980	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The item isn't purchasable in the item validation organization of the procurement business unit.	**Explanation:** This error appears if a requisition line has an item that's no longer purchasable in the item validation organization of the procurement business unit (from the purchasing options of the procurement BU). **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055981	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can place special handling requisition lines only on a purchase order.	**Explanation:** This message is raised when the user is trying to add special handling requisition lines to a negotiation. Special handling lines can only be placed on an order. **Resolution note:** Place special-handling requisition lines on a purchase order rather than an unsupported purchasing document type.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055982	You can't add requisition lines from different import sources to a negotiation.	**Explanation:** This message appears when the user tries to add multiple requisition lines to a negotiation, but the requisitions originate from different sources. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055983	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can add a requisition line with a one-time location only to a purchase order.	**Explanation:** This is an error message that appears while creating a negotiation for lines shipped to a one-time location that's currently not supported. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055984	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can add a requisition line that references a supplier configuration ID only to a purchase order.	**Explanation:** Requisition lines that reference a supplier configuration ID can only be placed on a purchase order and not on a negotiation. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055985	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: You can place a requisition line with a configured item only on a purchase order.	**Explanation:** Requisition lines for configurations can only be placed on a purchase order and not on negotiations. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055986	You must provide a negotiation template to create a negotiation.	**Explanation:** This error message will be displayed when the user tries to create a new negotiation without providing a negotiation template in the staged document. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055987	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The document style of the negotiation outcome doesn't support the {LINE_TYPE} line type.	**Explanation:** This error message appears when the user is trying to add a requisition line whose line type isn't supported by the negotiation outcome's document style. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055988	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The document style of the negotiation outcome doesn't support purchasing of outside processing items.	**Explanation:** This message is displayed when the user attempts to add an outside processing requisition line to the negotiation when the document style of the negotiation outcome doesn't support outside processing. **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055989	You must enable the Add Requisitions to an Existing Negotiation feature to add requisition lines to existing negotiations.	**Explanation:** This message is raised when the user tries to add requisition lines to an existing negotiation but the Add Requisitions to an Existing Negotiation feature isn't enabled. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055990	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The document style of the negotiation outcome doesn't support the {PURCHASE_BASIS} purchase basis.	**Explanation:** The purchase basis of the requisition line being added to the negotiation line isn't supported on negotiation outcome's document selected style. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2055991	Requisition {REQ_NUM}, Line {LINE_NUM}: You can add a line to an existing negotiation only if the import source matches with other lines in the negotiation.	**Explanation:** The import source on the requisition line being added doesn't match the import source of the requisition lines that are already in the negotiation. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055992	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The style or currency of the order is different from the source agreement on this requisition line.	**Explanation:** This message is displayed when the user publishes a staged document to add requisitions line to an existing order and the style or currency of the order is different from source agreement on the requisition line. This message is displayed in the warnings drawer available on the staged document page. User has to check the publish with warnings checkbox to proceed with publishing the staged document again. **Oracle user details:** Publish the document with warnings to add the requisition line without the source agreement reference on the resulting order line. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2055993	The requisition lines reference multiple source agreements.	**Explanation:** This message is displayed when the staged document has a requisition line that requires negotiation and user has published the staged document to create a new order. This message is displayed in the warnings drawer available on the staged document page. User has to check the publish with warnings checkbox to proceed with publishing the staged document again. **Oracle user details:** Publish the document with warnings to add the requisition line to the purchase order without the terms and conditions from the source agreement referenced on the requisition lines. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2055994	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: Negotiation is required for this requisition line.	**Explanation:** This message is displayed when the staged document has a requisition line that requires negotiation and user has published the staged document to create a new order. This message is displayed in the warnings drawer available on the staged document page. User has to check the publish with warnings checkbox to proceed with publishing the staged document again. **Oracle user details:** Publish the document with warnings to bypass the negotiation process. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2055995	One or more requisition lines have different sales orders.	**Explanation:** This message is displayed when the user publishes a staged document with requisition lines associated with different sales orders. This message is displayed in the warnings drawer available on the staged document page. User has to check the publish with warnings checkbox to proceed with publishing the staged document again. **Oracle user details:** Publish the document with warnings to create the purchase order with requisition lines associated with different sales orders. **Resolution note:** Separate requisition lines by sales order/customer to preserve their distinct fulfillment relationships.
PO-2055996	One or more requisition lines are from different customers.	**Explanation:** This message is displayed when the staged document has requisition lines from different customers and user has published the staged document to create a new order. This message is displayed in the warnings drawer available on the staged document page. User has to check the publish with warnings checkbox to proceed with publishing the staged document again. **Oracle user details:** Publish the document with warnings to create the purchase order with requisition lines from different customers. **Resolution note:** Separate requisition lines by sales order/customer to preserve their distinct fulfillment relationships.
PO-2055997	Requisition {REQ_NUM}, Line {REQ_LINE_NUM}: The item isn't purchasable in the item validation organization of the procurement business unit.	**Explanation:** This error is displayed when user publishes a staged document and the requisition line in the staged document have an item that isn't purchasable in the item validation organization of the procurement business unit (from the purchasing options of the procurement BU). **Resolution note:** Review item/category/UOM setup and purchasing enablement in the applicable organization; correct invalid values or source master data and retry.
PO-2055998	Requisition {REQ_NUMBER}, Line {LINE_NUM}: {MESSAGE}.	**Explanation:** When buyer tries to return or reassign more than 5 requisition lines together, it triggers ESS job and if any of the line isn't eligible to return/reassign, this message is displayed in the ESS output. Depending on the different reasons, the REST message is displayed in the token mentioned in the message text. **Resolution note:** Inspect the nested requisition-line validation message token; resolve the actual child validation before retrying staging.
PO-2056000	The lines couldn't be added because the negotiation in the staged document is no longer in Draft status.	**Explanation:** This messages is raised when user selects a negotiation that's in draft status in the staged document to add the lines. However, when the staged document is published the negotiation is no longer in draft status instead it's either Active, Preview, or Submitted. User needs to acknowledge to amend the negotiation to add lines and re publish the staged document. **Oracle user details:** Amend the negotiation to add lines to it. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056001	The preparer is editing some of the requisition lines of this requisition. Try again later.	**Explanation:** This message is displayed in the ESS output when the buyer tries to return or reassign the line in which either the line itself or any of the lines in the requisition is being edited by the preparer. **Resolution note:** Another user is editing or processing the requisition line. Wait for that action to finish, refresh the record and check availability before retrying.
PO-2056002	The line has been processed by another buyer.	**Explanation:** This message is displayed if the buyer tries to return or reassign a line and it has already been processed by another buyer. **Resolution note:** Another user is editing or processing the requisition line. Wait for that action to finish, refresh the record and check availability before retrying.
PO-2056003	The line couldn't be reassigned because there are errors in other lines. Deselect the lines with errors and reassign this line.	**Explanation:** This message is displayed in the ESS out against the line which couldn't be reassigned due to errors in other lines. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056004	The line couldn't be returned because there are errors in other lines. Deselect the lines with errors and return this line.	**Explanation:** This message is displayed in the ESS out against the line which couldn't be returned due to errors in other lines. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056005	The preparer has canceled the requisition or is editing it. Try again later.	**Explanation:** This message is displayed to the buyer when he tries to split, return or reassign the requisition line that's already canceled or withdrawn by preparer or returned by another buyer. **Resolution note:** Another user is editing or processing the requisition line. Wait for that action to finish, refresh the record and check availability before retrying.
PO-2056006	You can't provide a value for the destination subinventory because accounting has already been completed for the distribution.	**Explanation:** After the distribution has been billed or received, the buyer can't change the destination subinventory. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2056007	You must set the destination type to Expense because the purchase order has a procurement card reference.	**Explanation:** When there is a procurement card reference on the purchase order header, the only acceptable destination type for the schedules is expense. **Resolution note:** A PO with a procurement card reference must have Expense destination type. Change the destination or remove the card reference as permitted.
PO-2056008	You must either be defined as an active agent to manage negotiations for the procurement BU or have access to update documents of other agents.	**Explanation:** This is an error message that appears while creating or editing a negotiation for which user isn't the owner of the negotiation or doesn't have full access to other agents documents. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2056009	You can use the processRequesterChanges custom action only for change orders that are in Pending buyer action status.	**Explanation:** This message is displayed to the buyer user, if he tries to invoke the processRequesterChanges custom action on any purchase order with a change order other than the one in pending buyer action status. **Resolution note:** Review the current change order status and affected attributes. Complete or withdraw conflicting drafts and use the supported change-order path.
PO-2056010	You must specify a primary key attribute to retrieve data.	**Explanation:** This message is returned when a REST API is invoked to retrieve data without providing a value for any of the primary key attributes. The goal is to prevent users from performing blank queries on the resource. **Resolution note:** Supply the resource primary-key attribute required by the REST operation.
PO-2056011	You can't update the destination type because there are multiple distributions.	**Explanation:** If there are multiple distributions, the buyer can't change the destination type on the schedule. **Resolution note:** The distribution has downstream activity or a controlled status. Keep processed values unchanged and coordinate a supported correction with Finance.
PO-2056012	You need permission to add a new line when creating a change order.	**Explanation:** This message is displayed when a procurement preparer tries to add a new line on a change order using the REST service but doesn't have the appropriate privilege. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2056013	You can't update the supplier item on a purchase order line for a configuration.	**Explanation:** Message appears when REST is used to try and update the supplier item on a PO line that's for a configuration. A configuration is a unique item created by a customer who selected which options are desired as part of the finished product. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2056014	You can't provide a price for an option class.	**Explanation:** Message appears if user tries to provide or update the price of an option class since there is no price associated with an option class. Option classes are part of a configuration. A configuration is a unique item created by a customer who selected which options are desired as part of the finished product. **Resolution note:** Option classes do not support a separate price. Price the underlying configurable model/components appropriately.
PO-2056015	The base model price applies only to purchase order lines for configurations.	**Explanation:** Message appears if someone tries to update the base model price for line item that's NOT a configuration. A configuration is a unique item created by a customer who selected which options are desired as part of the finished product. **Resolution note:** Base model prices are supported only for configuration lines. Remove the attribute from ordinary items.
PO-2056016	You need permission to cancel a purchase agreement or its lines.	**Explanation:** This message is displayed when the user tries to cancel a purchase agreement or its associated lines using REST Services, but they don't have the required permission. There's no user action for this use case because buyers can't cancel agreement or its associated lines that were created by other buyers. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2056017	You need permission to finally close an agreement.	**Explanation:** The error displayed when a user tries to final close an agreement but doesn't have the appropriate privilege to perform the action. There's no user action for this use case because buyers can't close agreements that were created by other buyers. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2056018	Requisition {REQ_NUM}, Line {LINE_NUM}: You can't add a requisition line to a purchase order line that's canceled or finally closed.	**Explanation:** This message is displayed when the user publishes a staged document with requisition lines getting added to a order line that's already finally closed or canceled. **Resolution note:** Review the affected requisition line, sourcing reference, business units and document-builder eligibility; correct the source line and try again.
PO-2056019	Requisition {REQ_NUM}, Line {REQL_NUM}: The legal entity of the deliver-to organization is different from the legal entity of the staged document.	**Explanation:** This message is displayed when the user has published staged document that have requisition lines from different legal entities and requisitioning business unit allow multiple legal entities with a warning. This message is displayed in the warnings drawer available on the staged document page. User has to check the publish with warnings checkbox to proceed with publishing the staged document again. **Oracle user details:** Publish the document with warnings to create the purchase order with one or more schedules with a legal entity different from the sold-to legal entity of the staged document. **Resolution note:** Verify the legal entity of the deliver-to organization and the staged document; separate affected lines or use permitted publish-with-warnings behavior only after review.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2056020	Requisition {REQ_NUM}, Line {LINE_NUM}: The legal entity of deliver-to organization must be the same as the sold-to legal entity of the staged document.	**Explanation:** This message is displayed when the user has published staged document that have requisition lines from different legal entities and requisitioning business unit doesn't allow multiple legal entities. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2056021	You must enter an acknowledgment response at the purchase agreement header.	**Explanation:** When patching the child line on the Purchase Agreement acknowledgments resource, the application prevents the user from entering a response at the line if they aren't also providing a response at the header. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2056022	You can't withdraw purchase agreements as a supplier. Only buyers can withdraw purchase agreements.	**Explanation:** If the supplier user initiates the WITHDRAW custom action for purchase agreement, then this error message will be used. It will be needed for REST error since suppliers can't trigger withdraw PA flow from the UI. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2056023	You need permission to create a purchase agreement or its lines.	**Explanation:** This message is displayed when a supplier tries to create a draft purchase agreement or lines using the REST service. There is no user action for this use case because suppliers aren't authorized to perform this action, as they don't possess the required privileges for creating purchase agreements or their lines. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2056024	You need permission to delete a purchase agreement or its lines.	**Explanation:** This message is displayed when a supplier tries to delete a draft purchase agreement or lines using the REST service. There is no user action for this use case because suppliers aren't authorized to perform this action, as they don't possess the required privileges for deleting purchase agreements or their lines. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
PO-2056025	You can't apply discounts on credit lines.	**Explanation:** This message is displayed when user tries to apply discount on a purchase order with credit lines. **Resolution note:** Credit lines do not support discounts. Remove the discount from the credit line.
PO-2056026	You can't apply discounts to purchase orders with a document style enabled for configuration ordering.	**Explanation:** The message is raised when the user tries to apply discounts to a purchase order that has a style with configuration ordering enabled. **Resolution note:** Verify the purchasing document type/style configuration and supported line type; select compatible options and resubmit.
PO-2056027	The discount couldn't be applied because there's at least 1 fulfilled line in the purchase order.	**Explanation:** The error is raised in REST and UI when the user tries to apply discount to a purchase order and there's at least 1 fulfilled line. There isn't any user action for this use case because after purchase order lines are fulfilled buyers can't apply discounts. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056028	You must opt in to the Capture Supplier Discounts on Purchase Order Lines feature to call the Apply Discount action.	**Explanation:** This is a REST message that appears when someone tries to use the applyDiscount custom action, but hasn't opted into the feature that supports the action. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2056029	The staged document couldn't be created because the provided requisition lines belong to different requisitioning business units.	**Explanation:** Returned by the createDraftNegotiation custom action of the stagedDocuments REST API when the requisition lines provided in the requisitionLineIds parameter belong to different requisitioning business units. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056030	The staged document couldn't be created because one or more of the provided requisition lines haven't been assigned to a procurement business unit.	**Explanation:** Returned by the createDraftNegotiation custom action of the stagedDocuments REST API when one or more of the requisition lines provided in the requisitionLineIds parameter haven't been assigned to a procurement business unit for processing. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056031	The staged document couldn't be created because the provided requisition lines belong to different procurement business units.	**Explanation:** Returned by the createDraftNegotiation custom action of the stagedDocuments REST API when the requisition lines provided in the requisitionLineIds parameter belong to different procurement business units. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056032	The staged document couldn't be created because there's already a staged document for one or more of the provided requisition lines.	**Explanation:** Returned by the createDraftNegotiation custom action of the stagedDocuments REST API when one or more of the requisition lines provided in the requisitionLineIds parameter are already included in a existing staged document. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056033	The staged document couldn't be created because one or more of the provided requisition lines aren't available for processing.	**Explanation:** Returned by the createDraftNegotiation custom action of the stagedDocuments REST API when one or more of the requisition lines provided in the requisitionLineIds parameter aren't available for processing. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2056034	The staged document couldn't be created because one or more of the provided requisition lines identifiers aren't valid.	**Explanation:** Returned by the createDraftNegotiation custom action of the stagedDocuments REST API when one or more of the requisition lines identifiers provided in the requisitionLineIds parameter aren't valid. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056035	The staged document couldn't be created because the provided requisition lines belong to different requisitions.	**Explanation:** Returned by the createDraftNegotiation custom action of the stagedDocuments REST API when the requisition lines provided in the requisitionLineIds parameter don't belong to the same requisition. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056036	The staged document couldn't be created because the requisition line identifiers weren't provided.	**Explanation:** Returned by the createDraftNegotiation custom action of the stagedDocuments REST API when no values are provided for the requisitionLineIds parameter. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056037	You can't update the purchase agreement because the purchase agreement line is marked for cancellation.	**Explanation:** This message is displayed when the user tries to update a purchase agreement line using the REST service but it's marked for cancellation. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2056038	You must not provide a value for the {ATTR_NAME} attribute while creating or updating either the purchase agreement line.	**Explanation:** This message is displayed when the user provides a value for CancelFlag or CancelReason while creating or updating a purchase order line using the REST service. **Resolution note:** Remove the specified attribute from the agreement line create/update payload; it is not allowed for this operation.
PO-2056039	You can't update the source agreement reference on a purchase order line for a configuration.	**Explanation:** Message appears when REST is used to try and update the source agreement reference on a PO line that's for a configuration. A configuration is a unique item created by a customer who selected which options are desired as part of the finished product. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2056040	The purchase order couldn't be created because of this reason: {ERROR_DETAILS}.	**Explanation:** This message is generated when a purchase order couldn't be created using the custom action createPurchasingDocumentFromContract from purchasingUtilities rest resource. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056041	The staged document couldn't be created because a buyer couldn't be determined. Update the Negotiation Owner profile option with a default buyer.	**Explanation:** Message returned by the createDraftNegotiation custom action of the stagedDocuments REST API when the requisition lines provided in the requisitionLineIds parameter don't have an assigned buyer and there isn't a default buyer defined in the Negotiation Owner profile option. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.
PO-2056042	You must enable the Update Account, Budget Date, and Projects on Budgetary-Controlled Open Purchase Orders feature to call the rebuild accounts action.	**Explanation:** This message is displayed when user tries to rebuild accounts on a budgetary-controlled open purchase order and Update Account, Budget Date, and Projects on Budgetary-Controlled Open Purchase Orders feature isn't enabled. **Resolution note:** Verify project/task status, expenditure organization/type and project charging validation; correct the project attributes before submitting.
PO-2056043	You can't rebuild accounts because accounting has already been completed for the distribution.	**Explanation:** This message is displayed when user tries to invoke rebuild accounts custom action on a purchase order line, schedule or distribution using draft purchase orders REST API and accounting has happened on the distribution. **Resolution note:** Review the affected distribution and accounting setup; verify the charge account, allocation and business unit before recalculating or submitting.
PO-2056044	You can't rebuild accounts as a supplier.	**Explanation:** This message is displayed when supplier tries to invoke rebuild accounts custom action on a purchase order line, schedule or distribution using draft purchase orders REST API. **Resolution note:** Check the referenced supplier, site, address and applicable authorization/settings; correct any mismatched master data and retry.
PO-2056045	You can't rebuild accounts because the purchase order line or schedule is marked for cancellation.	**Explanation:** This message is displayed when user tries to invoke rebuild accounts custom action on a purchase order line, schedule or distribution using draft purchase orders REST API and purchase order line or schedule is marked for cancellation. **Resolution note:** A line or schedule marked for cancellation cannot have accounts rebuilt. Resolve the cancellation and choose an active eligible line.
PO-2056046	Another record on the same order couldn't be updated.	**Explanation:** When submitting a mass update schedules action, displayed in the Description for the process for the schedule if another schedule on the same order couldn't be updated. **Resolution note:** Review the affected transaction and related process diagnostics to identify the failed validation; correct the source/setup and retry. Escalate unresolved technical failures.

ERROR CODE	ERROR MESSAGE	RESOLUTIONS
PO-2056047	You can't change the price on a line that's marked for cancellation.	**Explanation:** Users can't execute the Recalculate price action on a line that's marked for cancellation. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2056048	You can't change the price on a line that's finally closed.	**Explanation:** Users can't execute the Recalculate price action on a line that's finally closed. **Resolution note:** Confirm the document state and locked attributes. Undo the unsupported modification or use a permitted change order/new document as applicable.
PO-2056049	You must provide a value for only one of these attributes: {ATTRIBUTE1} or {ATTRIBUTE2}.	**Explanation:** A user must provide a value for only one of the attributes and not for all. This is a REST message. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2056050	You must provide the {DEPENDENT_ATTRIBUTE} attribute with the {ATTR_NAME} attribute.	**Explanation:** This is a REST error message provided when a value is provided but the value of the dependent attribute isn't provided. **Resolution note:** Populate the mandatory field or missing detail identified in the message, confirm its value is valid, and submit again.
PO-2056051	The {ATTRIBUTE} attribute isn't allowed with the {CONDITION_NAME} alert condition.	**Explanation:** This is a REST message. This is shown when the user provides a values for an attribute which isn't applicable to alert type. **Resolution note:** Remove the unsupported alert condition attribute or choose an alert condition compatible with the attribute.
PO-2056052	The {ATTRIBUTE_NAME} attribute must be set to true, false, Y, or N.	**Explanation:** This is a REST message. This is shown when the user enters an incorrect value for an attribute which allows only boolean values. **Resolution note:** Compare the entered value with the stated business rule or limit; correct the value and validate again.
PO-2056053	You don't have permission to set the {ATTRIBUTE_NAME} attribute.	**Explanation:** The REST error message is displayed when the user provides a value for a field which isn't supported for a document type. For example, the Enable Retroactive Pricing Flag for the Contract document type. **Resolution note:** Check the user role, procurement-agent assignment and BU data access for the requested action; involve security administration if access is missing.
