Purpose

The purpose of this document is to describe the end-to-end intercompany transaction process in Oracle Fusion Financials, including transaction creation, approval, transfer to Receivables and Payables, and the resulting accounting impact.

This document demonstrates how intercompany transactions are processed between a Provider Legal Entity and a Receiver Legal Entity, with emphasis on system-generated accounting, ensuring accurate recording, reconciliation, and compliance with internal controls and audit requirements.

Definition of Intercompany Transactions

An intercompany transaction is a transaction executed between two legal entities within the same corporate group.

In Oracle Fusion, intercompany transactions are initiated in the Intercompany Accounting module and, once approved, are automatically transferred to Receivables for the provider entity and Payables for the receiver entity. The system derives transaction types, memo lines, suppliers, customers, and accounting distributions based on predefined intercompany configurations and balancing rules.

Typical intercompany transactions include:

- Intercompany sale of goods
- Intercompany provision of services
- Cost allocations and recharges
- Shared operational expenses
- Management and administrative fees

Roles and Responsibilities

Intercompany Accountant

The **Intercompany Accountant** is responsible for:

- Recording and reviewing intercompany transactions and system-generated journals
- Ensuring intercompany receivables and payables are accurately recorded
- Reconciling intercompany balances between entities
- Resolving intercompany differences
- Supporting month-end and year-end close activities
- Maintaining proper documentation and audit trails

When Company A sells a product to Company B, the intercompany transaction is recorded as follows:

- **Company A (Selling Entity):**
 - Dr. **Intercompany Accounts Receivable**
 - Cr. **Revenue Account** or **Clearing Account**
- **Company B (Buying Entity):**
 - Dr. **Expense Account** or **Clearing Account**
 - Cr. **Intercompany Accounts Payable**

These entries ensure that intercompany receivables and payables are properly recognized and can be reconciled between the related entities.

Initial Setup

To begin the setup process, the **Intercompany Accountant** role must be added and assigned to the appropriate users in the system. This role enables users to perform intercompany accounting and reconciliation activities.

The screenshot shows the Oracle User Accounts interface. The search bar contains 'Suhaila' and the search icon is highlighted with a red box. The search results table shows one entry: 'suhaila waleed' (highlighted with a red box), with User Name 'Suhaila.Waleed' and Email 'suhaila@corexc.com'. The status is 'Active' and 'Locked' is 'No'.

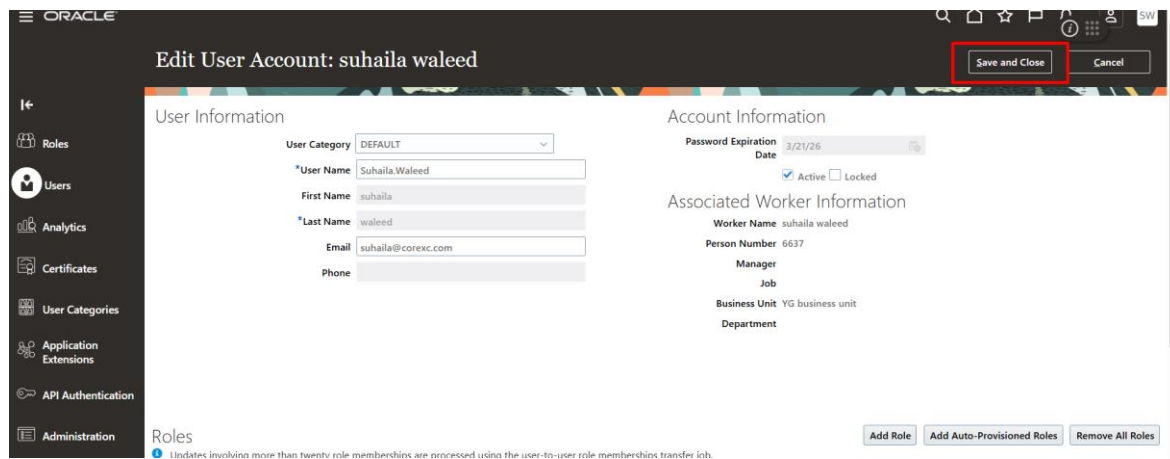

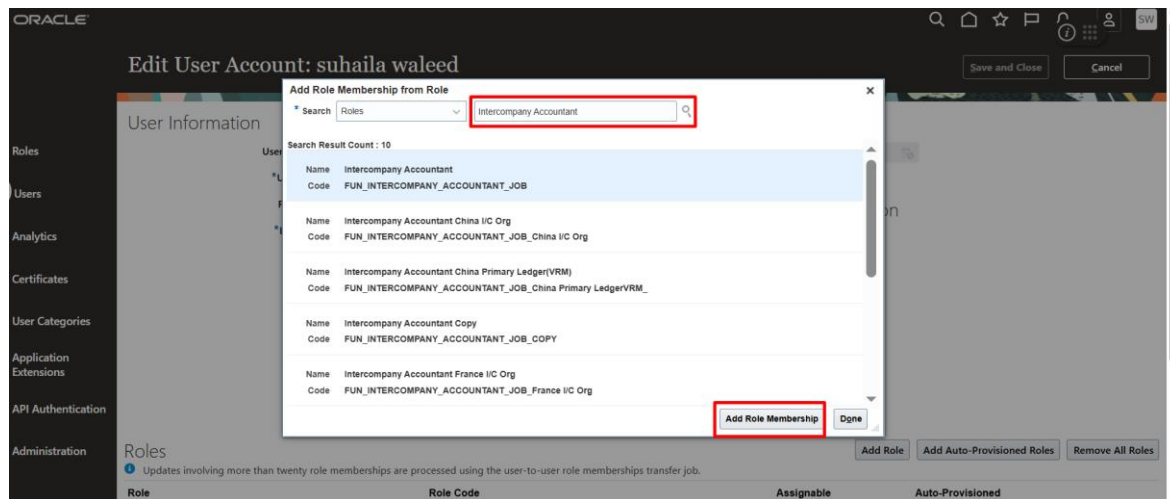

Display Name	User	Status	Action
suhaila waleed	User Name: Suhaila.Waleed Email: suhaila@corexc.com	Status: Active Locked: No	

The screenshot shows the 'User Account Details: suhaila waleed' page. The 'Edit' button is highlighted with a red box. The page displays user information (User Category: DEFAULT, User Name: Suhaila.Waleed, First Name: suhaila, Last Name: waleed, Email: suhaila@corexc.com, Phone:), account information (Password Expiration Date: 3/21/26, Active/Locked status), and associated worker information (Worker Name: suhaila waleed, Person Number: 6637, Manager, Job, Business Unit: YG business unit, Department).

Role	Role Code	Assignable	Auto-Provisioned
AR approvals	AR_APP	No	No

The screenshot shows the 'Edit User Account: suhaila waleed' page. The 'Add Role' button is highlighted with a red box. The page displays user information (User Category: DEFAULT, User Name: Suhaila.Waleed, First Name: suhaila, Last Name: waleed, Email: suhaila@corexc.com, Phone:), account information (Password Expiration Date: 3/21/26, Active/Locked status), and associated worker information (Worker Name: suhaila waleed, Person Number: 6637, Manager, Job, Business Unit: YG business unit, Department). The Roles section shows a table with columns: Role, Role Code, Assignable, Auto-Provisioned.

Role	Role Code	Assignable	Auto-Provisioned
AR approvals	AR_APP	☐	☐
Accounts Payable Manager	ORA_AP_ACCOUNTS_PAYABLE_MANAGER_JOB	☒	☐

Then Click Save and Close > Done

Intercompany Configuration Setup – Overview

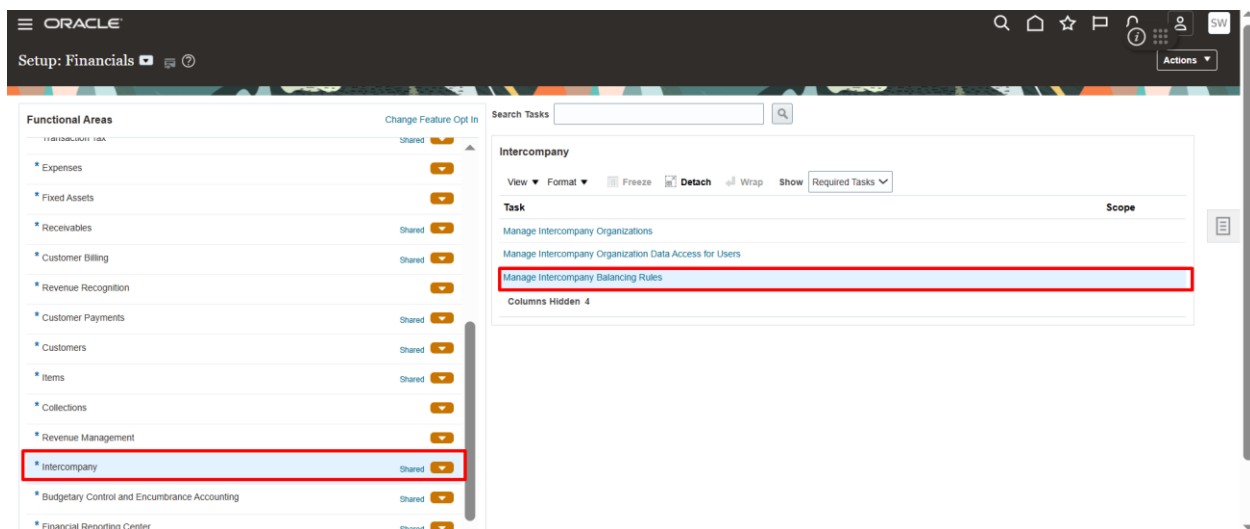

The intercompany setup is performed in a structured sequence to ensure proper accounting, control, and reconciliation of intercompany transactions. The following steps outline the required configuration activities in Oracle.

1. Manage Intercompany Balancing Rules

Intercompany Balancing Rules are defined to ensure that intercompany transactions are automatically balanced by the system. When transactions occur between intercompany entities, the system automatically generates entries to **Intercompany Accounts Receivable** and **Intercompany Accounts Payable** based on the defined rules.

Step 1: Manage Intercompany Balancing Rules

1. Navigate to **Setup and Maintenance**.
2. In the search field, enter **Manage Intercompany Balancing Rules**.
3. Select the task from the search results.

Intercompany Balancing Rules – Levels and Differences

Oracle Fusion uses **Intercompany Balancing Rules** to automatically generate balancing entries when intercompany or inter-balancing segment transactions occur.

These rules are applied based on a **defined hierarchy**, where the most specific rule takes precedence over more general ones.

1. Primary Segment Rules (Most Specific)

- Defined at the **Primary Balancing Segment** level (for example, Company segment).
- Provide the **highest level of control**.
- Used when different companies require different intercompany receivable and payable accounts.

Example:

If Company 101 transacts with Company 102, Oracle applies the rule defined specifically for Company 101.

2. Legal Entity Rules

- Defined at the **Legal Entity** level.
- Apply to all balancing segment values that belong to the same legal entity.
- Useful when multiple companies share the same legal entity and intercompany accounts.

Example:

All intercompany transactions related to *Jennie Egypt Legal Entity* use the same intercompany accounts.

3. Ledger Rules

- Defined at the **Ledger** level.
- Apply to all legal entities and companies assigned to the same ledger.
- Used when a common intercompany setup is required across the entire ledger.

Example:

All intercompany transactions within *Jennie EG Ledger* use the same intercompany accounts.

4. Chart of Accounts Rules (Least Specific – Fallback)

- Defined at the **Chart of Accounts (COA)** level.
-

Rule Application Hierarchy

Oracle evaluates Intercompany Balancing Rules in the following order:

1. Primary Segment Rule
2. Legal Entity Rule
3. Ledger Rule
4. Chart of Accounts Rule

The first applicable rule found is applied, and the remaining rules are ignored.

Rapid Implementation and Default Intercompany Rules

Rapid Implementation automatically generates Intercompany Balancing Rules at higher levels such as Chart of Accounts or Ledger to ensure system readiness and uninterrupted transaction posting. These rules serve as default fallback rules until more specific intercompany balancing rules are defined.

For demonstration purposes, the intercompany balancing rules generated by Rapid Implementation are used, as both legal entities share the same Chart of Accounts.

In a real production environment, more detailed intercompany balancing rules may be defined based on business requirements.

2. Manage Intercompany System Options

Intercompany System Options are configured to control the overall behavior of intercompany processing, including accounting preferences, balancing behavior, and default settings used across intercompany transactions.

Navigate to **Setup and Maintenance** and open **Manage Intercompany System Options**.

In this step, configure the following:

- **Conversion Rate Type**
Select the default rate type (for example, *Corporate*) that will be used for intercompany transactions.
- **Intercompany Calendar**
You can either:
 - Assign a **specific Intercompany calendar**, or
 - Use the **General Ledger (GL) calendar** for intercompany transactions.
- **Default Transaction Type**
Specify a **transaction type** to be used as the default.
This transaction type will be automatically defaulted by the system when creating intercompany transactions.

Review the remaining options as per business requirements, then save your changes.

3. Manage Intercompany Transaction Types

Intercompany Transaction Types are defined to classify different types of intercompany activities (e.g., sales, services, cost recharges). These transaction types determine the accounting treatment and approval requirements.

Navigation:

Setup and Maintenance >Intercompany>Manage Intercompany Transaction Types

Key Configuration Options:

- **Invoicing**
 - When this option is enabled, the system will **automatically generate intercompany invoices for both Payables and Receivables**.
 - A **Receivables invoice** is created for the provider legal entity, and a **Payables invoice** is created for the receiver legal entity.
 - When this option is **not enabled**, the system will **create intercompany journal entries only**, without generating Payables or Receivables invoices.
- **Manual Approval**
 - When this option is enabled, the **receiver must manually approve** the intercompany transaction before it is processed.
 - If this option is disabled, the transaction will be **processed automatically** without receiver approval.
- **Conversion Rate Type**

Defines the exchange rate type used for this transaction type when different currencies are involved.
- **Enable**

This option must be selected to make the transaction type **available for use**.

After completing the configuration based on business requirements, click **Save** to apply the change

Assign Balancing Segment Values to Intercompany Organization

5. Manage Intercompany Organization Data Access for Users

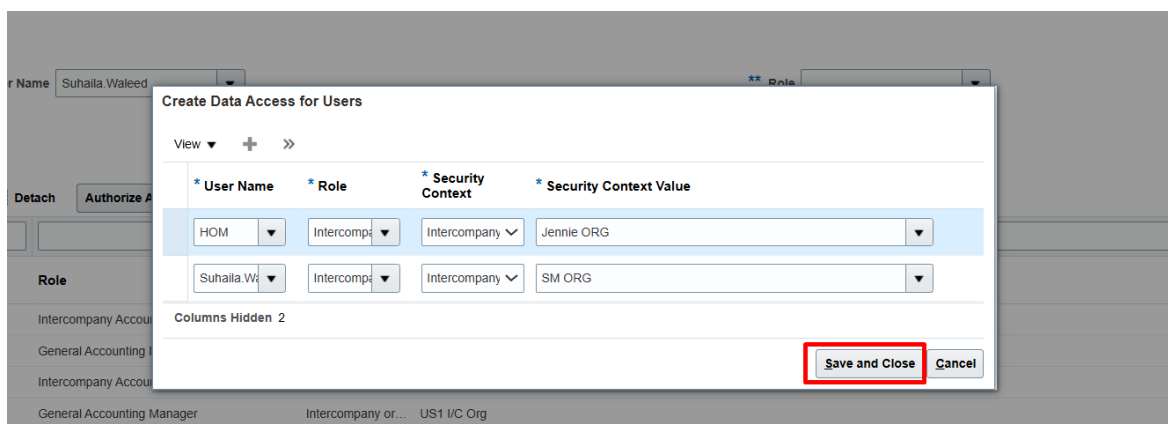

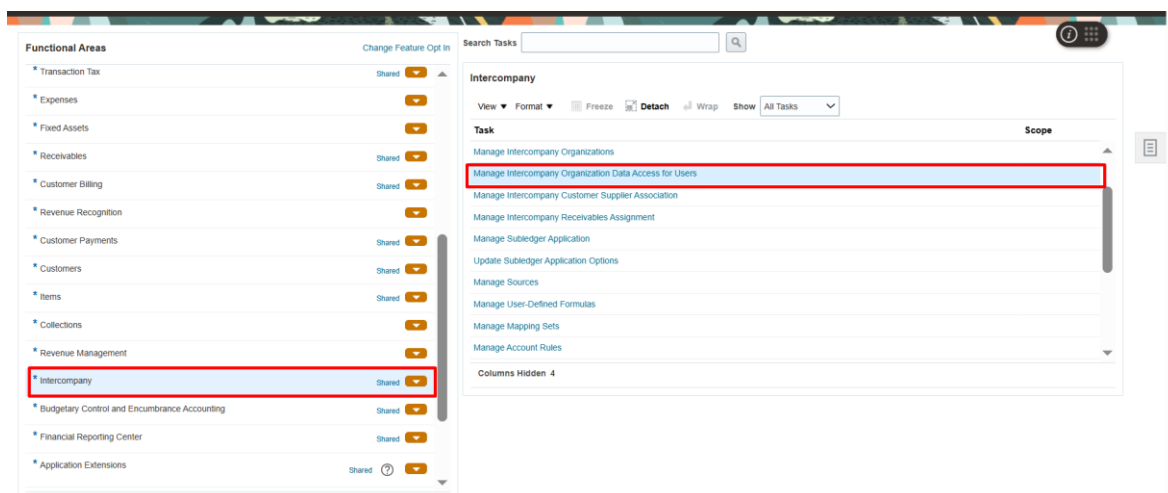

User access is assigned to intercompany organizations to ensure that users can only create, view, and process intercompany transactions for authorized entities.

User: Suhaila Waleed

- Assign access to the **Receiver Intercompany Organization**.
- This allows the user to **view, review, and approve** intercompany transactions as the receiver.

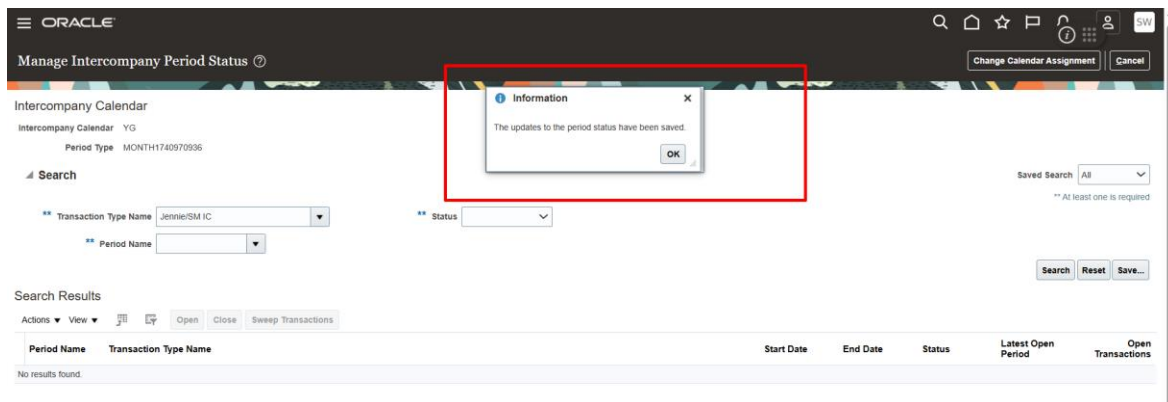

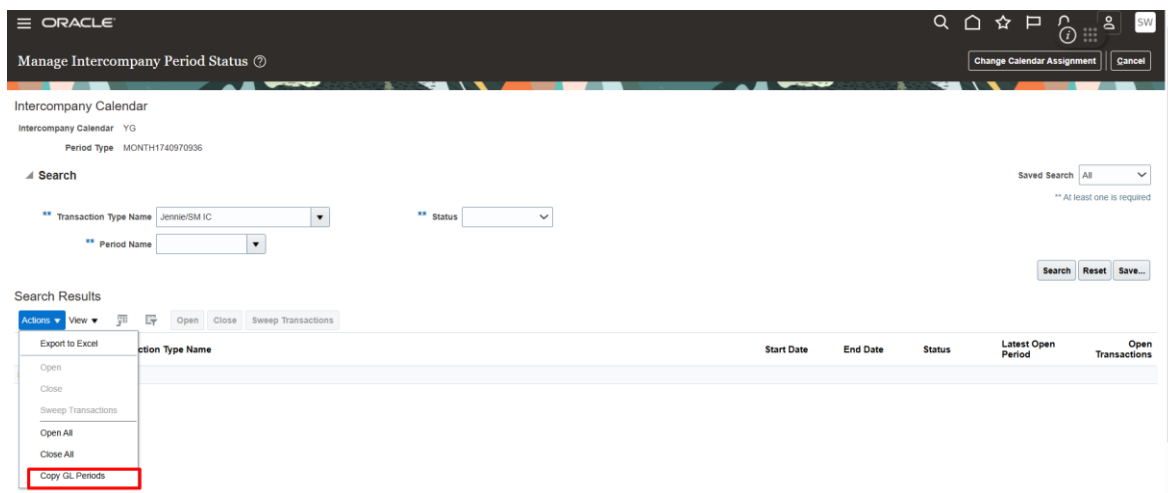

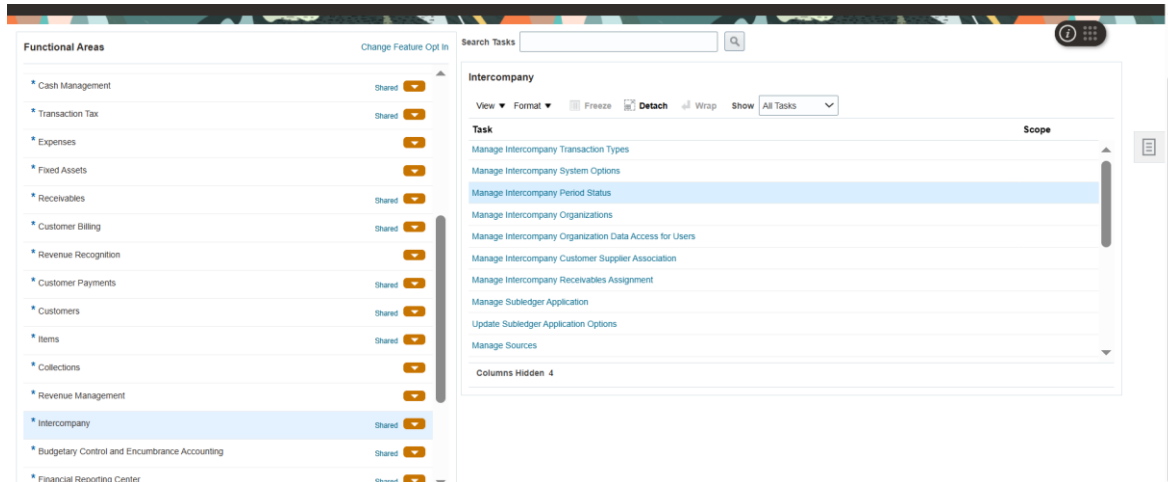

User: HOM

- Assign access to the **Provider Intercompany Organization**.
- This allows the user to **create and process** intercompany transactions as the provider.

6. Manage Intercompany Period Status

Intercompany accounting periods are opened or closed to control when intercompany transactions can be entered or processed, ensuring alignment with the financial close calendar.

7. Setup Approval (FinFunTransactionApproval)

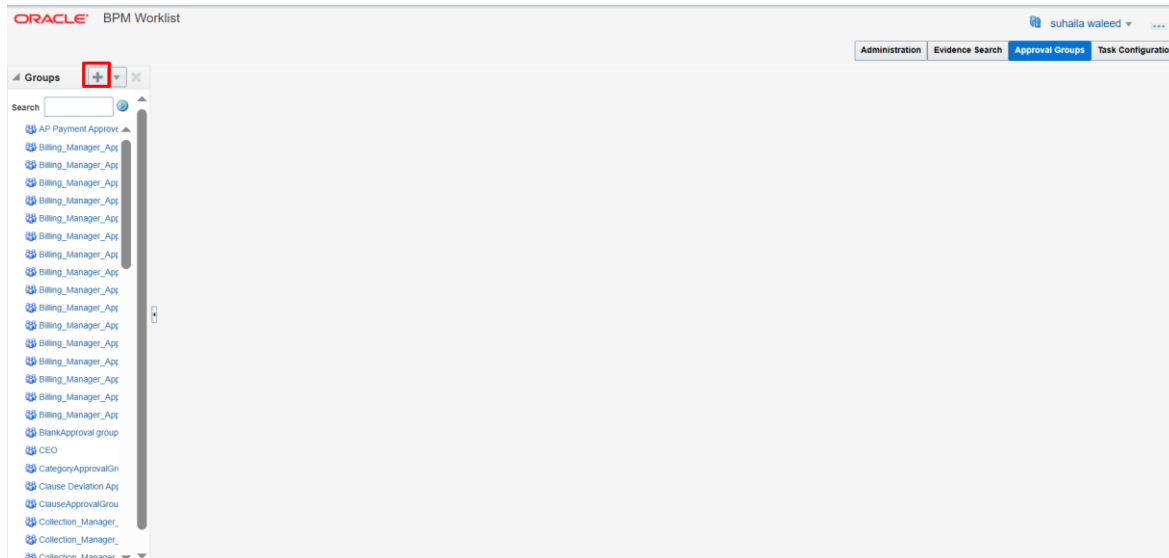

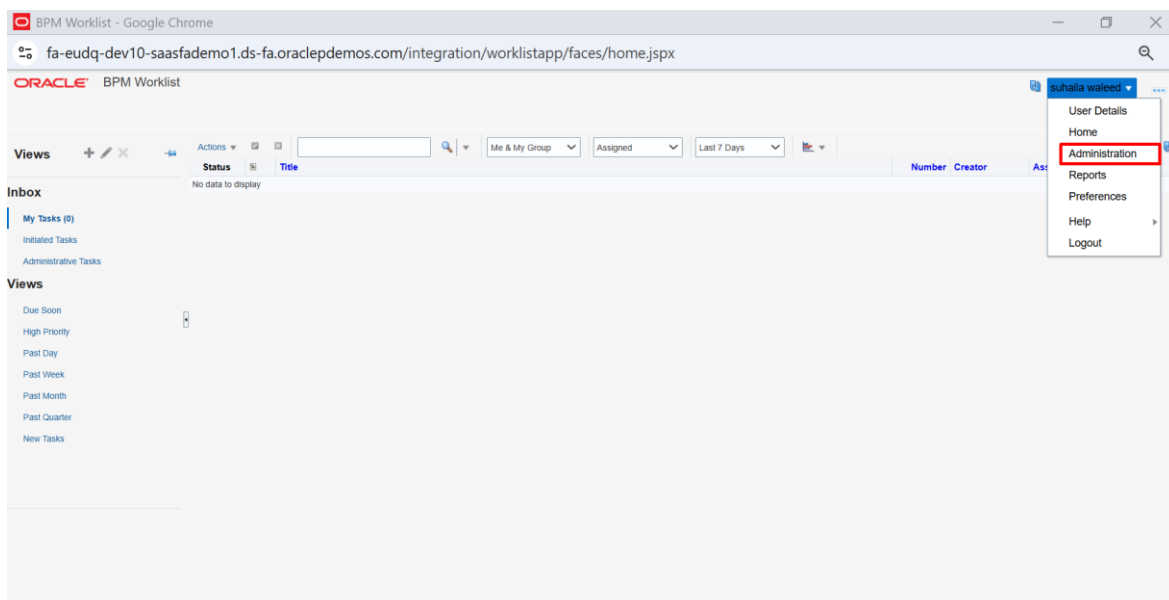

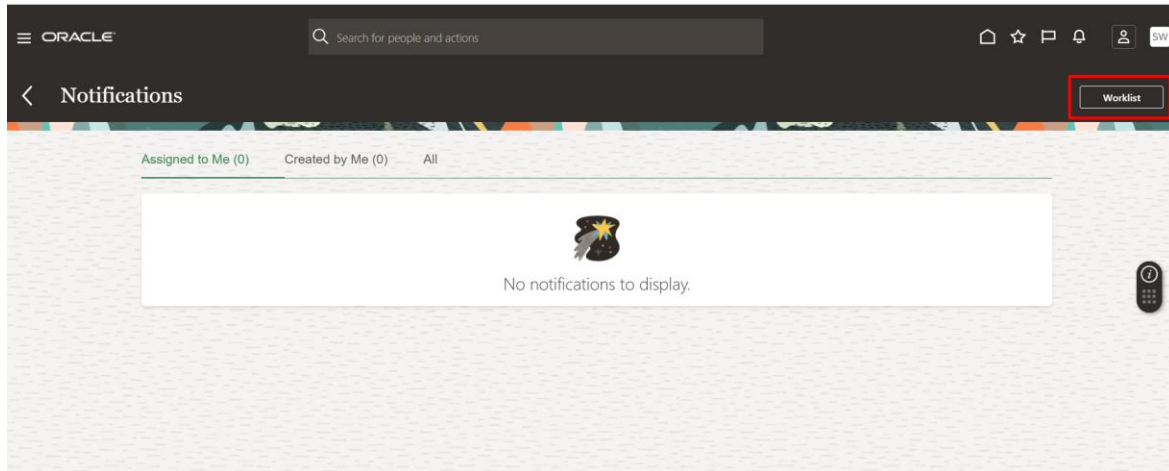

Approval workflows are configured to enforce review and authorization of intercompany transactions before posting, ensuring compliance with internal control requirements.

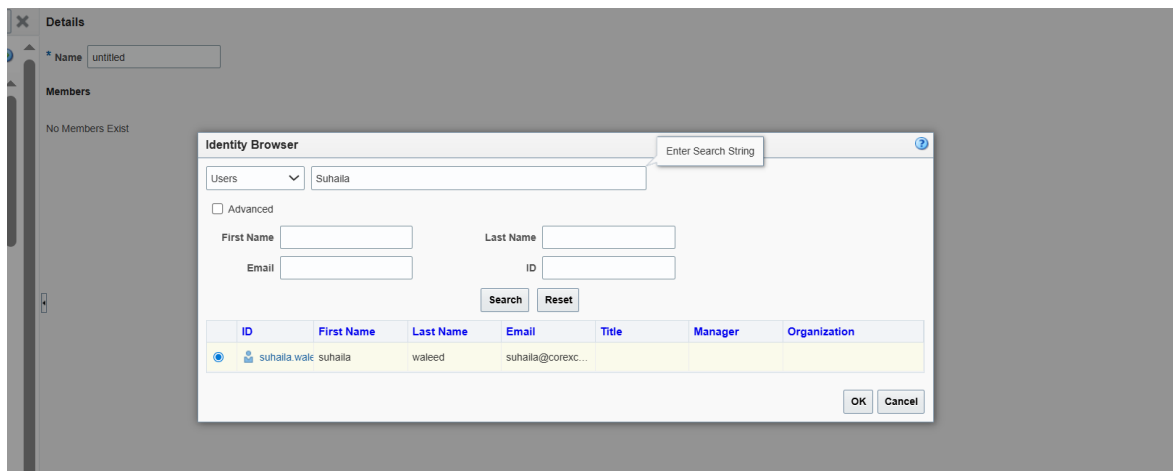

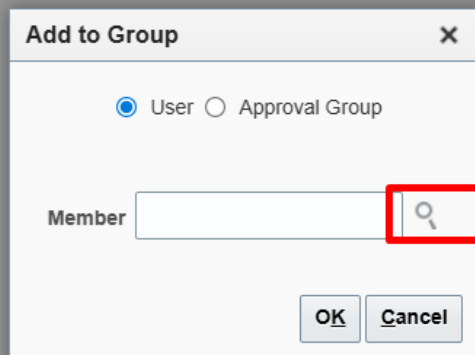

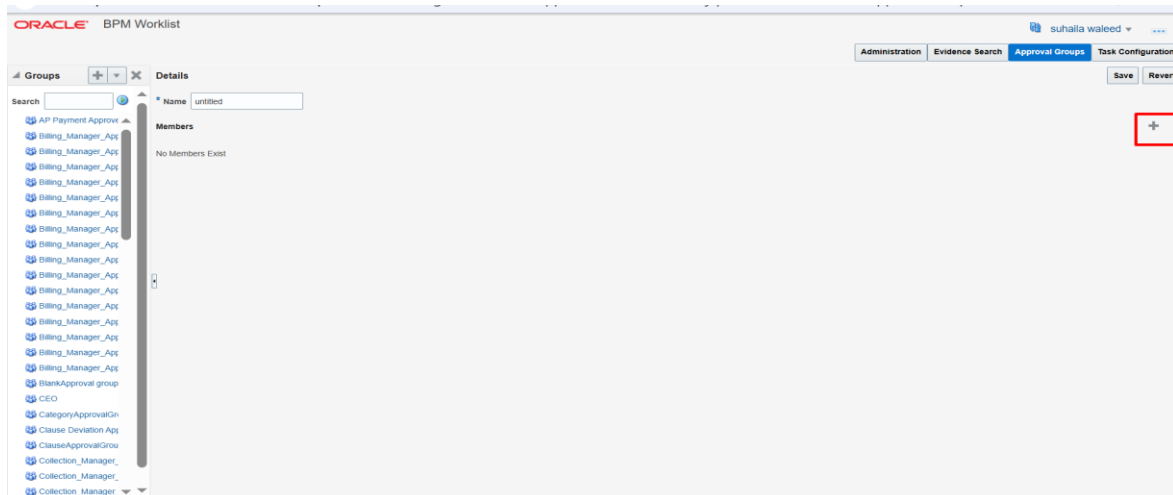

1. Navigate to **BPM Worklist**.
2. From your user name, open the drop-down list and select **Administration**.
3. Create an **Approval Group** and add the required user(s) (for example, **Suhaila Waleed**).
4. Click **Task Configuration**.
5. Search for **FinFunTransactionApproval**.
6. From **Assignees**, select **GO TO Role**.
7. Click **Add**, then select **General Rule**.

Define the Approval Rule:

- **Rule Condition**
 - IF ReceiverOrganization.intercoOrgName = 'SM ORG'
 - **Action**
 - Add **Approver** → select the **Approval Group**,
OR
 - Add **Approver** → select a **Resource** if a specific user is required.
8. Click **Validate** to check the rule.
 9. Click **Save**.
 10. Click **Commit** to apply and activate the configuration.

This setup ensures that when the **Receiver Intercompany Organization is SM ORG**, the transaction is routed for approval to the defined approval group or specific user.

8. Manage Intercompany Customer–Supplier Association

Customer and supplier relationships are established between intercompany organizations to support intercompany invoicing and settlement through Receivables and Payables.

It is **mandatory** to define the **Intercompany Customer and Supplier at the Business Unit level** in order to generate intercompany invoices.

- The **Intercompany Customer** must be assigned to the **Receivables Business Unit** so the system can create a **Receivables invoice** for the **provider** organization.
- The **Intercompany Supplier** must be assigned to the **Payables Business Unit** so the system can create a **Payables invoice** for the **receiver** organization.

Without defining the intercompany customer and supplier at the Business Unit level, the system **will not be able to generate Payables or Receivables invoices** for intercompany transactions.

This screenshot shows the 'Manage Intercompany Customer and Supplier Assignments' page. It features a table with columns for Legal Entity Name, Intercompany Organization, Customer Name, Customer Account Number, Supplier Name, and Supplier Number. The row for 'Jennie legal Entity' is highlighted with a red rectangle, showing its association with 'Jennie Customer' and 'YG supplier'. The row for 'SM legal Entity' is also highlighted with a red rectangle, showing its association with 'SM Customer' and 'SM Supplier'.

* Legal Entity Name	Intercompany Organization	Customer Name	Customer Account Number	Supplier Name	Supplier Number

9. Manage Intercompany Receivables Assignment

Receivables assignments are defined to determine how intercompany invoices are generated and processed for selling entities.

In this step, you define **which Receivables transaction type and memo line** will be used when the system creates an **Intercompany Receivables invoice**.

Setup and Maintenance > Intercompany > Manage Intercompany Receivables Assignments

The screenshot displays the Oracle Manage Intercompany Receivables Assignments page. The top section shows a list of Functional Areas on the left and a list of tasks in the center. The 'Intercompany' task is selected. The bottom section shows the 'Default Assignments' table with columns for Business Unit, Transaction Type, Receivables Transaction Type, and Receivables Memo Line. The table contains one row with values: Jennie business unit, Jennie/SM IC, Intercompany, and YG Consulting.

* Business Unit	* Transaction Type	* Receivables Transaction Type	Receivables Memo Line
Jennie business unit	Jennie/SM IC	Intercompany	YG Consulting

Example: Intercompany Transaction

This example demonstrates an intercompany transaction between two legal entities using the configured intercompany setup.

Scenario

- **Selling Entity (Provider):** Jennie Legal Entity
- **Buying Entity (Receiver):** SM Legal Entity

An intercompany transaction is created for the sale of goods or services from **Jennie Legal Entity** to **SM Legal Entity**.

Accounting Treatment

Selling Entity (Jennie Legal Entity):

- **Debit:** Intercompany Accounts Receivable
- **Credit:** Revenue Account *or* Intercompany Clearing Account

Buying Entity (SM Legal Entity):

- **Debit:** Expense Account *or* Intercompany Clearing Account
- **Credit:** Intercompany Accounts Payable

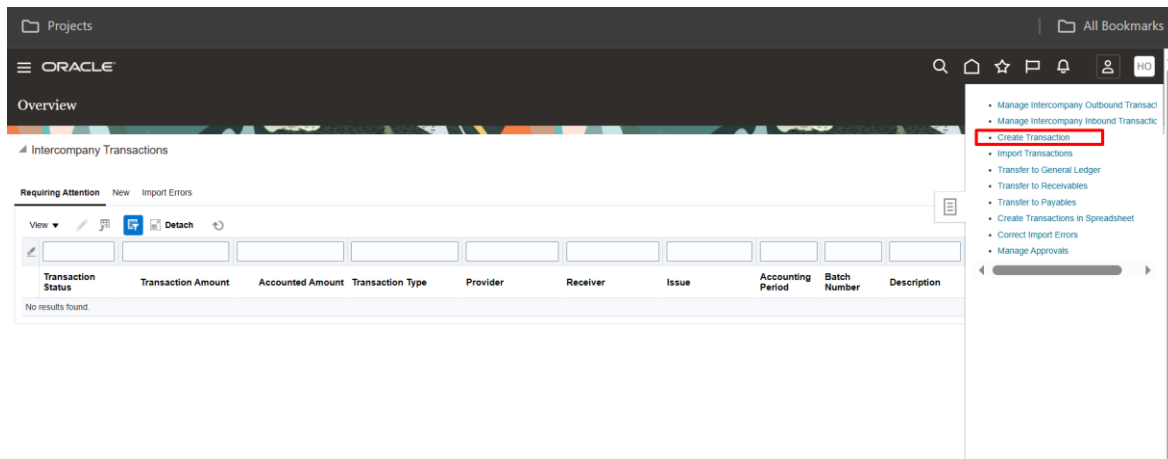

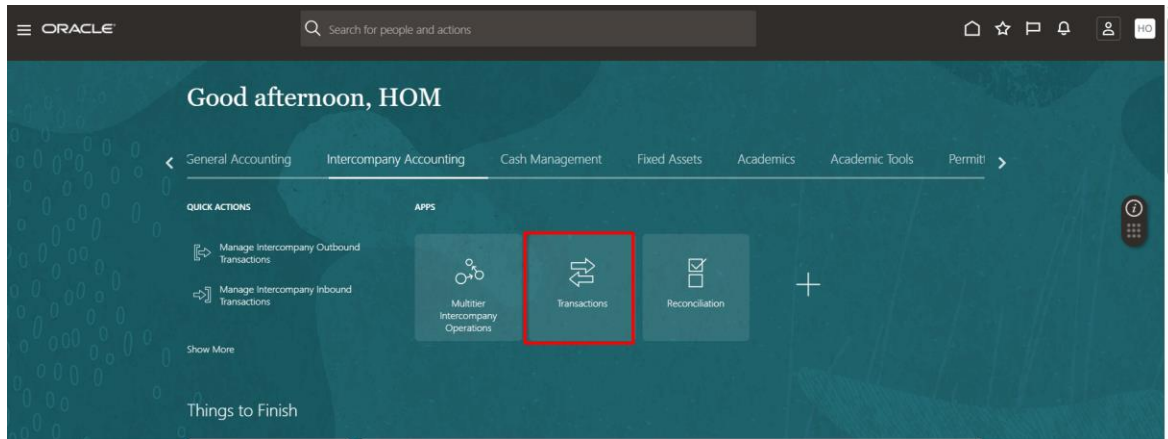

This accounting treatment ensures that:

- The provider recognizes revenue (or clears the intercompany balance).
 - The receiver recognizes the corresponding expense (or clears the intercompany balance).
 - Intercompany receivable and payable balances are properly recorded between the two legal entities.
-

Step 1: Navigate to Intercompany Transactions (Provider User)

Using the **Provider user (HOM)**, navigate to the Intercompany Transactions page.

1. From the **Home Page**, select **Intercompany Accounting**.
2. Click **Transactions**.

Step 2: Create Intercompany Transaction

1. From the **Intercompany Accounting** work area, click the **Tasks** panel.
2. Select **Create Intercompany Transaction**.
3. In the **Header Section**:
 - Enter the **Provider** (the organization providing the service or goods).
4. In the **Transaction Section**:
 - Enter the **Receiver** (the organization receiving the service).
 - Input the **Amount** on the **Debit** side (this represents the receiver's cost).
5. In the **Transaction Distribution Section**:
 - For the **Provider**:
 - Enter the **Revenue Account**.
 - Enter the **Amount** on the **Credit** side.
 - For the **Receiver**:
 - Enter the **Expense Account**.
 - Enter the **Amount** on the **Debit** side.

The screenshot displays the Oracle 'Create Intercompany Batch' interface. The 'Batch: 2531' header section includes fields for Provider (Jenise ORG), Transaction Type Name (Jenise SM IC), Batch Date (12/24/25), Accounting Date (12/24/25), Batch Status (New), Legal Entity (Jenise legal Entity), Currency (EGP Egyptian Pound), Conversion Rate Type (Corporate), Control Amount, and Batch Amount (5,000.00). The 'Transactions' section shows a table with columns for Transaction Number, Receiver, Legal Entity, Debit (EGP), Credit (EGP), and Transaction Description. A red box highlights the Debit (EGP) field with a value of 5,000.00. The 'Transaction Distributions' section is divided into 'Provider' and 'Receiver' tabs. The 'Provider' tab shows a table with columns for Distribution Number, Account, Debit (EGP), Credit (EGP), and Description. A red box highlights the Credit (EGP) field with a value of 5,000.00. The 'Receiver' tab shows a table with columns for Distribution Number, Account, Debit (EGP), Credit (EGP), and Description. A red box highlights the Debit (EGP) field with a value of 5,000.00.

Transaction Number	Receiver	Legal Entity	Debit (EGP)	Credit (EGP)	Transaction Description
