

➤ **Oracle Fusion SCM – PIM Series(Part 5)**

Setup of Item Classes and Templates

➤ **Prepared by: [Chinna Narasimhulu Gadena]**

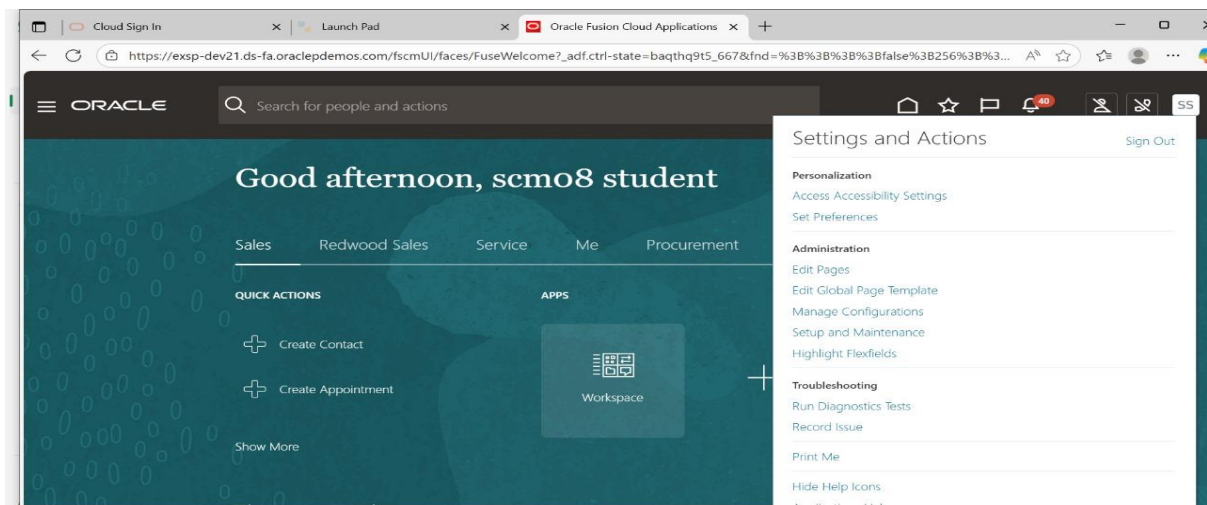

➤ **Introduction :**

In this part of my PIM series, I will explain how to create and manage Item Classes and their Templates in Oracle Fusion Cloud. Item Classes help standardize attributes, numbering, and lifecycle phases for items.

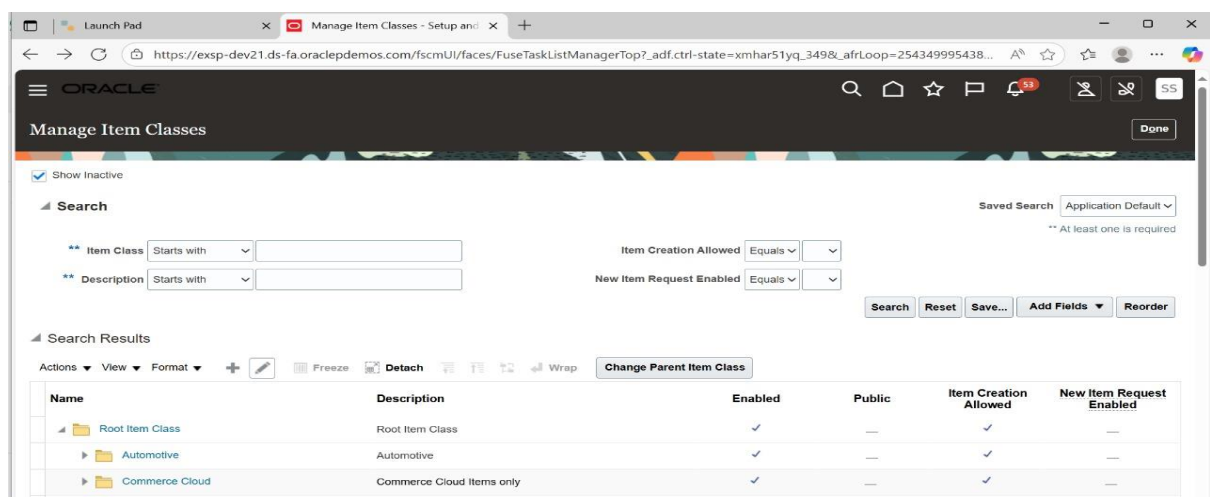

➤ Navigation to Manage Lifecycle Phases

From the Home Page, go to:

→ Setup and Maintenance

→ Manage Item Classes search & list

➤ Create Item Class

"Here, I created a new Item Class called Oppo Item Class instead of using default classes, for learning purposes."

The screenshot shows the 'Create Item Class' configuration page. At the top, there are input fields for 'Item Class' (Oppo Item Class), 'Internal Name' (ROOT_ICC), and 'Description' (Oppo Item Class). There are checkboxes for 'Item creation allowed' (checked), 'Default Item Class' (unchecked), and 'Public' (unchecked). Below these is a section for 'Parent Item Class' and 'Parent Item Class Description'. A tabbed interface at the bottom includes 'Basic', 'Item Management', 'Security', 'Transactional Attributes', 'Pages and Attribute Groups', 'Lifecycle Phases', and 'Templates and Formats'. The 'Item Class Hierarchy' tab is active, showing a table with columns 'Item Class', 'Description', and 'Item Creation Allowed'.

Item Class	Description	Item Creation Allowed
Opportunity Item Class	Opportunity Item Class	✓
Automotive	Automotive	✓
Commerce Cloud	Commerce Cloud Items only	✓
Documentation	Documentation	✓

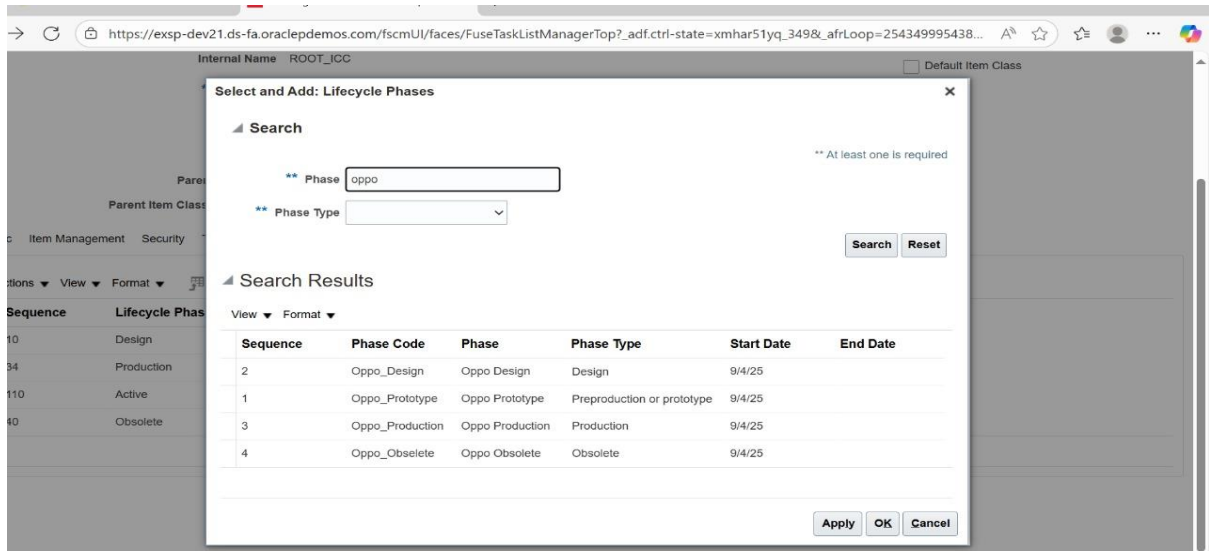

➤ Number & Description Generation

The screenshot shows the 'Number & Description Generation' configuration page. It has two main sections: 'Number Generation' and 'Description Generation'. The 'Number Generation' section has a dropdown for 'Item Number Generation Method' set to 'User Defined'. The 'Configured Item Number Generation Method' is set to 'Sequence'. The 'Details' section includes fields for 'Starting Number' (100), 'Prefix Type' (User Defined), 'Prefix', 'Increment by' (10), 'Suffix Type' (User Defined), 'Suffix', and 'Delimiter' (Asterisk). The 'Description Generation' section has a dropdown for 'Item Description Generation Method' set to 'User Defined'.

We can define Item Number generation rules (sequence, prefix, suffix, increment) and automatic description generation methods.

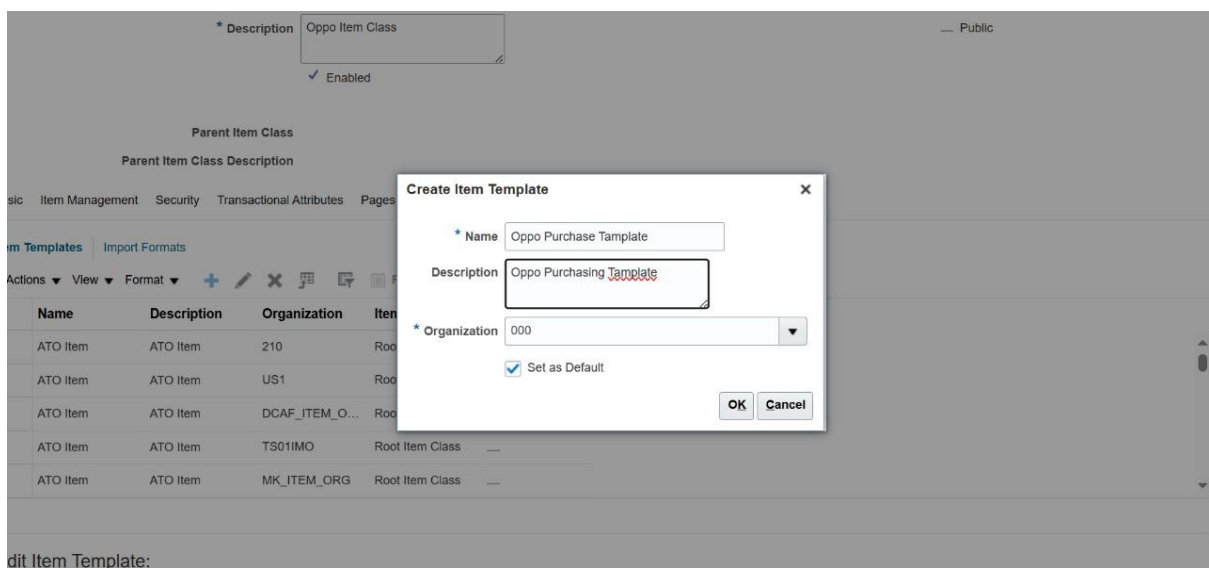

➤ Lifecycle Phases

"Each Item Class can be linked with Lifecycle Phases like Design, Production, Active, and Obsolete to control item journey."

➤ Create Template

Now, let's create an Item Template under Oppo Item Class to quickly reuse attributes and defaults.

dit Item Template:

➤ Edit Template

Next, I edited the template and defined Unit of Measure (UOM), Lifecycle, and transactional attributes.

The screenshot shows the 'Edit Item Template' page for 'Oppo Purchase Template' in Oracle Fusion PIM. The page is divided into two main sections: 'Overview' and 'Specifications'. The 'Overview' section contains fields for 'Item Status' (Active), 'Lifecycle Phase' (Production), 'User Item Type' (Oppo purchased item), 'Pack Type' (Base Unit or Each), and 'Engineered' (Yes). The 'Specifications' section is currently selected and shows the 'Unit of Measure' configuration. It includes a 'Primary Unit of Measure' dropdown set to 'Ea', a 'Secondary Unit of Measure' dropdown, a 'Tracking Unit of Measure' dropdown set to 'Primary', and a 'Defaulting Control' dropdown. A 'Barcode String' field is also visible at the bottom.

Name	Description	Organization	Item Class	Default
ATO Model - Pu...	ATO Model - Pu...	DCAF_ITEM_O...	Root Item Class	---
ATO Model - Pu...	ATO Model - Pu...	TS01IMO	Root Item Class	---
ATO Model - Pu...	ATO Model - Pu...	MK_ITEM_ORG	Root Item Class	---
ATO Model - Pu...	ATO Model - Pu...	SG000	Root Item Class	---
ATO Model - Pu...	ATO Model - Pu...	SGAUTO001	Root Item Class	---

Edit Item Template: Oppo Purchase Template

Item Status: Active
Lifecycle Phase: Production
User Item Type: Oppo purchased item
Pack Type: Base Unit or Each
Engineered: Yes

Unit of Measure

Primary Unit of Measure: Ea
Secondary Unit of Measure:
Tracking Unit of Measure: Primary
Defaulting Control:
Barcode String:

With this, we have completed creating an Item Class and Template in Oracle Fusion PIM. In the next part, I will cover Attribute Groups and further configurations.

Next Steps in PIM Series:

And next parts, we will configure:

Part 6: Item Catalogs & Item Categories.
