

➤ Oracle Fusion SCM – PIM Series(Part 4)

Setup of UOM Classes and Conversions for OPPO Enterprise

Prepared by: [Chinna Narasimhulu Gadena]

➤ Introduction :

In Oracle Fusion PIM, Units of Measure (UOM) define how items are counted, measured, and transacted across Procurement, Inventory, and Sales.

UOMs are grouped into Classes, each having one Base UOM and multiple Child UOMs.

Note: Oracle already provides default UOM Classes.

For learning purposes, I created my own Oppo UOM Classes so I can use them consistently in all my examples.

➤ Navigation to Manage Lifecycle Phases

From the Home Page, go to:

→ Setup and Maintenance

→ Search for Manage UOM Classes.

➤ Creating a UOM Class

Click the “+” symbol

→ Enter Class Code, Description, and Base UOM.

Adding child UOMs under Oppo Weit Class.

The screenshot shows the 'Units of Measure' form in Oracle Fusion Cloud Applications. The form is titled 'Units of Measure' and has a search bar labeled 'Search by UOM name or code'. Below the search bar is a 'Class Name' dropdown menu. The form contains several input fields: 'UOM Code' with the value 'GM', 'UOM Name' with the value 'Grams', 'UOM Description' with the value '1000 kilograms', 'Class Name' with a dropdown menu showing 'Weit Class', 'Base UOM Code' with the value 'KG', 'Base UOM Name' with the value 'Kilograms', 'Conversion' with the value '1kg - 1000Grams', and 'End Date' with a calendar icon. A 'Required' label is visible at the bottom right of the form.

Oppo weight Class with Base UOM (KG) and child UOMs.

The screenshot shows the 'Unit of Measure Classes' form in Oracle Fusion Cloud Applications. The form is titled 'Unit of Measure Classes' and has a search bar labeled 'WC'. Below the search bar is a 'Base UOM Name' dropdown menu. The form contains a table with the following data:

Class Code	Base UOM Code	Base UOM Name
WC	KG	Kilograms

The table has a 'Create UOM' button at the top right. The 'Class Code' is 'WC', the 'Base UOM Code' is 'KG', and the 'Base UOM Name' is 'Kilograms'. The table also includes a description: 'Weit Class used for items measuring items weight'.

Instead of screenshots for every class, I have provided table format of all UMO Classes + Base UOMs + Child UOMs in a summary table.

 Table:

Class	Base UOM	Child UOMs	Description
Quantity	Each (EA)	Dozen, Pack, Box, Pair	Countable items
Weight	Kilogram (KG)	Gram, Tonne, Pound, Ounce	Weight-based
Length	Meter (M)	CM, MM, KM, Inch, Foot	Dimensional itm
Volume	Liter (L)	ML, CC, Gallon, Pint	Liquids/volume
Time	Hour (HR)	Minute, Second, Day	Time-based units
Area	Sq. Meter (SQM)	SqCM, Hectare, Acre	Surface/land

UOM Conversions:

Unit of Measure (UOM) Conversions define the relationship between a Base UOM and its Child UOMs.

◆ They ensure accurate calculations in Procurement, Inventory, and Sales when different UOMs are used.

◆ Example: 1 Dozen (DZ) = 12 Each (EA), 1 KG = 1000 GM, 1 Day = 24 Hours.

◆ Conversions make transactions consistent across the supply chain.

Conversions link child UOMs to Base UOMs.

Examples:

Quantity: 1 Dozen (DZ) = 12 Each (EA)

Weight: 1 GM = 0.001 KG

Length: 1 Inch = 0.0254 M

Volume: 1 Gallon = 3.785 L

Time: 1 Day = 24 Hours

Area: 1 Acre = 4046.86 SQM

Key Takeaways

UOMs ensure consistency across Procurement, Inventory, and Sales.

Each Class must have one Base UOM.

Child UOMs require proper conversion formulas.

Oppo-specific UOM Classes make practice structured and realistic.

Next Steps in PIM Series:

And next parts, we will configure:

Part 5: Item Classes

Part 6: Item Catalogs

Part 7: Item Categories.
